spraying— experiments, (27) 842; (29) 235.	ement dust, (27) 152; (31) 150. dynamiting, (34) 125. grass, (29) 339; (33) 339.
formulas, (39) 762. with nitrate of soda, (36) 535.	tin bands or girdles, (35) 446.
spring v. full planting, (33) 439. standard barrel for, (32) 499.	asphaltum treatment, (40) 445.
standard barrel for, (32) 499. standard containers for, (38) 40.	bearing only in alternate years, (33) 236. dying in New Zealand, (38) 452.
stations, experimental, in Ontario, (27) 39.	failure to bear, (38) 298.
sterilization for the home, (36) 17. stocks for, (32) 234.	fall v. spring planting, (35) 837; (38) 41, 640. fertilizing when planted, (33) 237.
stocks, notes, (35) 342. stocks, tests, (40) 444.	manuring, (28) 741.
stocks, tests, (40) 444. stone—	oak fungus and wood decay of, (37) 51. planting in dry lands of Chile, (31) 240.
bacterial disease of, (34) 248.	red spider affecting, (27) 265.
culture in southern Utah, (30) 442. diseases in Rhone valley, (38) 50.	regulation of sale, (28) 836. ringing experiments, (32, 636.
diseases of, (36) 750.	ripening of growing parts, (35) 542. root hardiness, (36) 840.
gummosis, (30) 749. gummosis and brown rot of, (38) 454.	size for planting, (33) 338.
pruning, (32) 837.	size for planting, (33) 338. taying, Christ-Junge method, (36) 443.
resistant stocks for, (35) 645. ripe rot of, (37) 151.	top grafting, (31) 740; (34) 437. variability of yield, (38) 743.
spray calendar for, (26) 539. spraying mixtures for, (35) 143.	variability of yield, (38, 743. winter injury, (27) 538; (30) 344, 352; (40) 348, 834, 835.
wild species as hosts of Coccomyces, (39)	winterkilling, (35) 234. withering of blooms, (30) 47.
456. storage, (26) 441; (40) 150, 864.	withering of blooms, (30) 47. wood decay in, (34) 53.
storage—	tropical and subtropical—
cellar, description, (27) 644. cellars, (38) 292.	in California, (31) 47. manual, (34) 438. treatise, (27) 645.
growth and spread of fungi in, (26) 749; (28)	treatise, (27) 645.
53. in relation to humidity, (36) 741.	tropical— cold storage, (32) 439, 745.
on the farm, (32) 486. ventilation, (29) 538; (31) 533.	culture and improvement, (36) 742. culture in Philippines, (34) 635.
storehouses, construction and management, (32)	in Philippines, (35) 648.
338.	in the Visayas, (26) 336. preparation and use, (27) 567.
subtropical, studies, (40) 763. subtropical, varietal standardization, (38) 537.	recipes, (28) 863.
suitability for jelly making, (35) 418. sunscald, notes, (27) 440.	shield budding, (32) 142. tests, (38) 842.
survey of Mesa County, Colorado, (37) 241.	vegetative propagation, (36) 641.
thinning, (37) 895.	uniform score card for, (29) 40.

use in Surinam (28) 761	dosage tables for, (26) 561.
use in Surin im, (28) 761. use in the diet, (38) 166	leakage gage description (27) 163
use in the dict rry, (29, 862 varieties, (27) 438, 842, (29) 235, 540; (30) 441, 640;	leakage meter, calibration, (34) 751.
varieties, (27) 438, 842, (29) 235, 510; (30) 441, 640;	notes, (29) 640; (33) 59; (38) 458.
(32) 337, 437; (33) 335; (34) 231, 635, (36) 39; (37) 241, 543, 532; (38) 112, 413, 641, 842.	leakage meter, calibration, (34) 751, notes, (29) 640; (33) 59; (38) 458, of citrus trees, (39) 463, of households, (34) 653, stylides (40) 756
varieties for—	Statics, (40) 102.
Atkansas, (30) 533	tents, leakage, (26) 256, 561.
Butish ('olumbia, (34) 437.	Funigator for insects, construction, (27) 564. Fungi—
Idaho. (33) 44	action in soils, (38) 118.
Illinois, (34) 42; (39) 241.	American, treatise, (27) 329.
Georgia, (34) 436. Idaho, (33) 44 Illinois, (34) 42; (39) 241. Maine, (37) 41.	ammonia accumulation by, (35) 513.
Minnesota, (33) 140; (37) 241; (40) 148, 740, 742.	ammonification by, (36) 221. and bacteria, relative importance in soils. (36)
Nebrosko (40) 340	434.
New Jersey, (34) 144. Ontario, (28) 839. Ontario and Quebec, (32) 539. Pacific Northwest, (29) 745.	and hosts, chemical relations, (32) 822.
Ontario, (28) 839.	and windfall timber, relations, (39) 847.
Ontalio and Quebec, (32) 339.	acquatic, deposition of iron on, (26) 825. as affected by—
United Kingdom, (31) 838.	aluminum, (34) 526.
Utah, (29) 147. West Virginia, (34) 637	cold, (34) 538.
West Virginia, (34) 637	illuminating gas, (39) 632.
western Washington, (33) 44; (34) 796. varieties, new, for South Dakota, (39) 346.	metallic salts, (23) 527. Roentgen and ultraviolet rays, (38) 855.
variety—	tobacco smoke and methyl iodid vapor, (39)
adaptability, (29) 147.	527.
collections, (40) 834.	assimilation—
tests, (39) 444; (40) 444. washing in canning factories, (37) 416.	investigations, (28) 824. of nitrogen by, (29) 824; (30) 629. behavior with organic acids, (26) 203.
waste, vinegar from, (38) 414.	behavior with organic acids, (26) 203.
water content as affected by cooking, (26) 462.	biological studies, (34) 49.
white-marked tussock moth on, (39) 561.	causing discoloration in paper, (37) 630.
wholesale distribution, (33) 692. wild, culture, (27) 242.	cellulose destroying, (34) 136. chemistry of, (26) 746.
wild, of Paraguay, (30) 41.	chemotropic reactions in, (36) 845.
wild, of Paraguay, (30) 41. wine, diminution of acidity in, (29) 117.	Chinese, studies, (27) 848.
wines, acids of, (37) 310.	Chondriosomes in, (32) 822; (35) 635.
wines, micro-organisms in, (29) 209. worms, green, see Green fruit worm and Xylina	classification, treatise, (27) 149. conduction of lithium, (39) 122.
spp.	conservation, (36) 615. cultivated by termites, (40) 453. damping off, treatment, (33) 98. destructive to bees, (28) 662. development in relation to food supply, (32) 428.
worms in Nova Scotia, (35) 853.	cultivated by termites, (40) 453.
Fucellis of North America, (40) 263.	damping on, treatment, (33) 98.
Fuchsias, carbon dioxid for, (31) 532. Fucio acids, studies, (40) 804.	development in relation to food supply. (32) 428
Fucidin, description, (29) 566.	development on fatty hydrocarbons, (29) 133.
Fucosan, properties of, (29) 566.	differentiation in host tissues, (39) 247.
Fucus—	edible—
palmatus, analyses, (26) 324. vesiculosus, analyses, (37) 814.	arsenic in, (27) 269. culture and use, (35) 470. digestibility, (28) 865.
vesiculosus, enzyms of, (30) 728; (35) 25.	digestibility, (29) 865.
Fuel—	
analyses, (29) 119. briquetting investigations of Bureau of Mines,	notes (26) 227: (28) 861
(31) 386.	nitrogenous constituents of, (28) 501. notes, (26) 237; (28) 861. nutritive value, (37) 669. of South Africa, (29) 461. effect on organic acids, (27) 528.
for internal combusion engines (20) 600	of South Africa, (29) 461.
for oil engines, (39) 792. for oil, gas, and steam engines, cost, (30) 88. oil as wood preservative, (32) 841. oil, larvicidal value, (37) 665. oil, tests, (28) 539; (28) 486. prices in Washington State, (38) 568. Saving in house heating (34) 789.	effect on organic acids, (27) 526.
oil as wood preservative (32) 841	endoconidia production in, (35) 247. entomogenous—
oil, larvicidal value, (37) 665.	in Barbados, (38) 157.
oil, tests, (26) 539; (28) 486.	in St. Vincent, (36) 153.
saving in house heating, (34) 789.	investigations, (27) 565.
Fuels—	notes, (33) 58. of Porto Rico, (33) 459.
briquet tests, (31) 386.	of Trinidad, (31) 145.
for cooking, costs, (40) 658.	review of literature. (28) 753.
household, tests for, (31) 93, 462. mixed, possibilities of, (31) 386.	utilization, (32) 63. enzym production and extraction, (39) 247.
Fulgoridae, hymenopterous parasites of, (34) 557.	exotic, descriptions, (27) 445.
rulica atra as a game bird. (31) 555.	filamentous—
Fulligo septica, notes, (30) 247.	destruction of cellulose by, (28) 627.
Fuller's earth, use in chemical separations, (38) 411. Fumago—	importance in soils, (26) 825. fission, biology, (35) 25.
citri, notes, (34) 446.	fixation of—
0less, notes, (27) 857	atmospheric nitrogen by, (26) 123.
Fumeric acid in fresh beef, (31) 759.	nitrogen by, (27) 225.
apparatus for absorption, (30) 505.	food value and toxicity, (32) 760. growth—
effect on soils and vegetation, (27) 229.	and spread in storage fruit. (26) 749; (28) 53.
effect on vegetation, (38) 429.	in heated soils, (26) 815; (27) 620. in plant decoctions, (37) 728; (38) 524.
Fumigants, effect on baking quality of flour, (26) 357.	in plant decoctions, (37) 728; (38) 524. on culture media and trees, (40) 203.
Fumigating—	heat development of, (31) 323.
machines for hydrocyanic acid gas, (33) 556.	hemolytic power, (30) 878.
room, gas-tight door for, (31) 60.	higher, composition, (26) 802.
Fumigation—	
addratus, description and tests, (28) 893.	humidity relations, (37) 549.
apparatus, description and tests, (28) 893. as affected by temperature and moisture, (29) 762.	humidity relations, (37) 549. hydrocyanic acid— and benzoic aldehyde producing, (36) 734.

Fungi—Continued. imperfect, notes, (30) 351. imperfect, on cereals, (30) 846.	Fungi—Continued. rust—continued. wintering in Bohemia, (28) 345.
in alimentary canal of man, (35) 560. soils, (36) 214, 215. Stilton cheese, (28) 879. wheat seed, (32) 750. isolating single-spore strains, (34) 538.	wintering over in uredo stage, (29) 346. saprophytic, parasitic activity, (32) 640. saprophytic stage in, (28) 442. Schweimtz collections, (39) 50.
leaf injury or loss due to, (35) 243. lower	smut— notes, (26) 746. of Switzerland, (26) 645. narysitem (31) 540
enzyms of, (27) 25. factors affecting growth and sporulation, (28) 524. polysaccharids of, (33) 411.	parasitism, (31) 540. treatise, (27) 746. soil— ammonifying efficiency, (32) 29, 817.
manual, (27) 727. mold—	infection of wheat by, (26) 746. notes, (27) 223. studies, (28) 442, 524; (31) 127.
assimilation of salts by, (29) 28, 29, 30, autolysis, (28) 803. carbon and nitrogen assimilation by, (33)	solution of copper by, (26) 853. specialization of parasitism in, (28) 442. storage of oxygen by, (28) 329.
726. cleavage of organic acids by, (30) 503. formation and regulation of enzyms by, (31)	textbook, (35) 147. toxicity, (30) 878. treatise, (27) 575.
730. nitrogen nutrition of, (31) 223; (32) 327, 728; (36) 527.	treatment, (32) 447. use against scale insects, (28) 453. viability, (26) 819.
protein synthesis by, (27) 525. relation to cane sugar, (28) 429. relation to iodin compounds, (29) 133.	wood-destroying— abortive sporophores of, (33) 552, black zones of, (38) 555.
selective power of, (33) 824. source of nitrogen for, (27) 226. new or little known, (39) 753.	culture media, (38) 254. in orchard trees, (34) 53. notes, (31) 247; (32) 54; (39) 255.
nitrogenous constituents, (27) 364. nutrition of, (31) 426 of Ceylon, (39) 333.	studies, (40) 350. wood injuring, studies, (27) 354; (34) 240. yeast-like, occurrence and pathogenicity, (36)
Great Britain, treatise, (27) 25. Japan, (38) 426, 648; (39) 753. Porto Rico, (40) 844.	879.
soils, studies, (37) 718. Texas soils, (36) 434 Trinidad, (26) 146.	dealers, licensed, (27) 663. law in Ohio, (31) 740. laws, (28) 642; (29) 266; (36) 39; (40) 45.
Washington, (33) 545. on Lolium, studies, (26) 545. on seed coats of grains, (28) 442.	rungicides—see also Sprays and specific kinds, adherent, description, (33) 449, 450.
oxidation of manganese by, (32) 514. parasitic— culture on living plants, (28) 545.	analyses. (27) 441; (31) 49, 142, 340, 740; (32) 169, 438; (33) 47, 735; (34) 436, 639; (35) 141; (36) 744; (37) 114, 243; (38) 643. and insecticides, compatibility, (32) 243.
dissemination, (35) 349. effect on cereals, (31) 541. effect on woody plants, (31) 343.	compatibility chart, (39) 39. copper, studies (26) 853.
growth in concentrated solutions, (36) 245. growth in cultures, (38) 757. host relations, (28) 442. in Colombia, (35) 243. Iowa, (26) 51.	copper sulphate coefficient, (40) 253. detection of inert ingredients, (27) 655. determination of adhesiveness, (28) 538.
Japan, (21) 149.	effect on— germination of wheat, (26) 845; (30) 837. grapevines, (27) 850.
Michigan, (30) 240. New Jersey, (39) 648. Russia, (40) 155. Turin, (30) 47, 746.	formulas, (40) 543, inspection— and analyses, (39) 240, 345, in Maina (20) 148; (24) 40; (38) 487
Wisconsin, (26) 341; (35) 844. infection experiments, (26) 845; (28) 149, 844; (33) 847.	in Ohio, (31) 740; (36) 744. manual, (29) 341. notes, (28) 148.
on scale insects, (30) 455. on sugar cane, (26) 748. overwintering, (33) 647.	phenolic, studies, (35) 208. powdered, tests, (30) 651. preparation (39) 453; (40) 746.
oxidizing enzyms in, (27) 25. relation to host plants, (27) 543, 648. specialization, (37) 149. pathogenic, review of investigations, (28) 178.	preparation and use, (26) 47, 48, 445, 840, 841; (27) 45, 344, 845; (28) 48, 238, 449, 642, 841; (29) 146, 236, 459, 554, 651; (30) 442, 534, 642,
pathogenic, review of investigations, (28) 178. pathological forms, (26) 545. peptolytic enzyms in. (32) 130.	inspection— and analyses, (39) 240, 345. in Maine, (29) 146; (34) 40; (36) 467. in Ohio, (31) 740; (36) 744. manual, (29) 341. notes, (28) 148. phenolic, studies, (35) 208. powdered, tests, (30) 651. preparation (39) 453; (40) 748. preparation and use, (25) 47, 48, 445, 840, 841; (27) 45, 344, 845; (28) 48, 283, 449, 642, 841; (29) 146, 236, 459, 554, 651; (30) 442, 534, 642, 643, 739; (31) 141, 153, 635; (33) 639; (34) 436, 539, 643, 739; (35) 743. promoting adherence in, (30) 248. spreading qualities, (27) 753.
pathological forms, (28) 545. peptolytic enzyms in, (32) 130. physiology, (37) 129, 727, 728; (38) 524. poisonous, detection, (30) 830. polymorphism in, (34) 32. preservation in edit strong. (77) 858.	spreading qualities, (27) 753. standard v. nonstandard, (34) 232. superficial tension and wetting power, (27) 548.
production of mycelium by, in soil, (35) 820. relation to—	tests, (27) 855; (28) 48, 348; (33) 648; (35) 149; (37) 47, 247; (39) 348. treatise, (31) 517.
callose in root hairs, (29) 326. cell content of host plants, (28) 443. citrus gummosis, (33) 55.	use, (27) 45. use with arsenical poisons, (38) 156. wetting power, (29) 157, 451, 850.
meteorological conditions, (27) 543. soils, (27) 728. tuber formation, (30) 29, 730.	Fungus— beetle, two-banded, notes, (37) 567. fairy rings, studies, (38) 222.
respiration in, (26) 628. Russian, new species, (28) 51. rust— rust— (28) 745	fairy rings, studies. (38) 222. flora of soils, (27) 728. flora of South Africa, studies, (29) 45. galls, storage of reserve materials in, (28) 429. gnats of North America, (27) 57.
and smut, spore formation in, (28) 745. culture experiments, (28) 242; (31) 540. of Great Britain, treatise, (30) 745.	paint-destroying, description, (27) 224. paint-destroying, description, (27) 253.

Fungus-Continued.	Fusarium—Continued.
parasites of—	eumartii— n.sp., description, (34) 246
Occidae and Aleurodidae, utilization, (28)	notes, (36) 147.
man and animals, (32) 271.	studies, (36) 648.
plants, effect on soils. (29) 150. Funkia ovata, stomatal movement in. (26) 627.	gemmiperda, notes, (28) 241. gramineum, relation to citrus gummosis, (29)
Funnel, laboratory, description, (40) 409.	247.
Funtumia—	heveae n.sp., notes, (37) 253.
elastica—	incarnatum, notes, (29) 150.
culture and tapping, (26) 339. culture in Belgian Kongo. (35) 544.	infection of grain by, (29) 244. lateritium—
plantings in Kongo, (26) 50.	notes, (36) 752.
tapping experiments, (31) 312.	relation to apple sour sap, (38) 452.
growth and rubber yielding value, (37) 548. Fur-bearing—	lathyri— investigations, (37) 155.
animals—	n.sp., description, (32) 446.
breeding and raising, (29) 373. domestication, (37) 573.	limonis, notes, (31) 152, 244.
laws relating to, (34) 751; (36) 455; (38) 456;	limonis, treatment, (33) 149.
(40) 350.	notes, (30) 619.
natural history, (26) 772. of an Indiana farm, (30) 354.	relation to soil temperature, (36) 748.
treatise. (40) 646.	relation to temperature, (39) 249. resistance to, (40) 745.
treatise, (40) 646. mammals of North America, (29) 70.	studies, (38) 449.
Fur-	lycopersici—
buyers' guide, (34) 570.	description, (31) 49. description and treatment, (30) 50; (32) 147.
farming—	
booklet, (29) 672. in Canada, treatise, (32) 870. in United States and Canada, (39) 880.	notes, (20) 649; (37) 561. tomatoes resistant to, (34) 646. malli n.sp., on onion, (40) 643. maydiperdum n.sp., description, (26) 446. metachroum, notes, (28) 847. moniliforme, treatment, (30) 547. mycellum in tobacco, staining, (39) 248 n.spp., descriptions, (31) 544. n.spp. in soils, (39) 240. n.spp., notes, (29) 243. neglectum n.sp., description, (28) 845.
in United States and Canada, (39) 880.	mauli n.sp., on onion, (40) 643.
notes, (37) 573.	metachroum, notes, (28) 847.
notes, (37) 573. textbook, (27) 774. with mink, (40) 373. industry in Alaska, (31) 727. trade, treatise, (26) 772. waste, analyses, (28) 523.	moniliforme, treatment, (36) 547.
industry in Alaska, (31) 727.	mycellum in tobacco, staining, (39) 248
trade, treatise, (26) 772.	n.spp. in soils. (39) 249.
Furcraea—	n.spp., notes, (29) 243.
cabuya fiber, strength of, (29) 313.	neglectum n.sp., description, (28) 845. nivale—
fiber from, (39) 442. gigantea as a fiber plant, (37) 233.	notes, (29) 47, 244, 445; (30) 448.
gigantea, varieties grown in Mauritius, (34) 434.	relation to Nectria graminicola, (30) 846
spp., binder twine from, (27) 534.	studies, (31) 343. treatment, (26) 446.
Furfurol—	niveum on watermelon, (34) 53.
detection in ethyl alcohol, (29) 312.	on cereals, treatment, (35) 245.
determination, (27) 113. formation from wood during steaming process,	orobanchus, pigments of, (32) 428. oxysporum, notes, (29) 646; (30) 649; (32) 136,
(33) 614.	239; (36) 846.
formation in wine, (31) 316. in cider vinegar, (32) 808. precipitants for, (36) 318.	oxysporum, studies, (28) 851; (36) 846; (38) 848
precipitants for, (36) 318.	pathological species, (34) 840. putaminum, notes, (31) 539.
production in curing hay, (35) 312.	putrefaciens, studies, (26) 749.
Furniture—	radioicola—
disinfection, (32) 456. insects affecting, (28) 248; (30) 53; (34) 651.	studies, (35) 455. temperature relations, (36) 649.
Furs—	rots of sweet potato, (39) 854. rubi, investigations, (26) 850.
cold storage, (27) 565.	rubi, investigations, (26) 850. rubiginosum, notes, (31) 542; (32) 642, 843.
home manufacture, treatise, (38) 13. Fusaea, description, (31) 339.	samoense n.sp., description, (31) 347.

_ urine, (38) 713.	73, 168, 366, 467, 564, 663; (32) 169, 259, 568,
effect on—	007, 802; (33) 71, 371, 508, 500; (34) 169, 371,
plants, (28) 327.	268, 667, 765; (37) 471, 767; (38) 369, 376;
ammonia production and use in killed plants, (28) 327. autolysis, (31) 763.	(39) 270, 370, 773; (40) 72, 470, 571.
cooking temperatures of candy sirups, (32)	
762. germination of seeds. (27) 201.	72, 470, 571. and meal, digestibility, (39) 171.
germination of seeds, (27) 201. protein catabolism, (29) 663. respiration of seeds, (27) 729.	ash analyses. (29) 861.
respiration of seeds, (27) 729.	definition, (28) 98.
secretion of diastese by fungi, (31) 13. soil nitrogen, (35) 218	efficiency for milk production, (36) 872. for milk production, (40) 572.
fatty acid esters of. (29) 269.	palatability and nutritive value, (38) 66.
formation—	proteins, efficiency for milk production, (36)
by amylases, (36) 315.	671. feeds, paper on, (28) 74.
from body proteins, (33) 868; (34) 866. in plants, (35) 413.	flour, amino acid in, (33) 665. flour, examination, (26) 867.
	flour, examination, (26) 867.
humilication, (38) 26.	foods, examination, (28) 357. inheritance of imperfections in, (27) 500.
humification, (38) 26. in lymph and blood, (39) 670. industry in United States, (30) 711, 791.	meal—
liffit of assimilation. (28) 262.	meal— analyses, (27) 570; (28) 265, 364, 669; (29) 467, 769; (30) 67, 68, 169, 467, 888; (31) 73, 564, 663; (32) 259, 667; (38) 71, 371, 759; (35) 562, 867; (36) 167, 270, 370. definition, (28) 98. digestibility, (39) 171. feeding value, (29) 468. ferthizing value, (34) 520. for laying hens, (39) 578. physical properties, (40) 762. variations, (32) 557, (35) 108. wheat, amino acid in, (33) 665.
manufacture, (39) 113. manufacture from vine shoots, (26) 613.	769; (30) 67, 68, 169, 467, 868; (31) 73, 564,
metabolic relationship of proteins to, (33) 261.	867; (36) 167, 268, 667, 765; (38) 665; (39)
methods and results of analysis, (35) 316.	167, 270, 370.
preparation from corncobs, (40) 17.	dennition, (28) 98.
properties, (32) 109. relation to polyneuritis gallinarum, (29) 865.	feeding value, (26) 468.
resorption in small intestine, (29) 268.	fertilizing value, (34) 520.
separation from lactose and galactose, (26) 202. sirup, analyses. (34) 660.	nhysical properties (40) 762
solutions, turbidity, (36) 808.	variations, (32) 559; (35) 108.
solutions, turbidity, (36) 808. standards for, (29) 867.	wheat, amino acid in, (33) 665.
toxicity, (28) 661. I-Glucose, studies, (37) 109.	wheat, colloidal swelling, (34) 111. wheat, hydrolysis, (28) 607.
Glucosid alcohols, synthesis, (29) 505.	Glutenin—
Glucosids—	as affected by heat, (26) 866.
and carbohydrates, treatise, (28) 710.	effect on wheat gluten, (26) 67. lysin content, (31) 559.
as producers of hydrocyanic acid, (29) 713. biochemical detection, (29) 509.	Glutose—
effect on germination of seeds, (33) 825.	and glutocose in molasses, (40) 313.
formation by plants, (36) 329.	determination, (37) 617.
indigo-yielding, physiology of, (35) 333. occurrence in pears, (26) 327.	determination in molasses, (39) 206. notes, (36) 609.
pigment-producing substances from, (30) 129.	Glyceria maritima, growth in presence of salt, (33)
preparation and detection, (30) 202.	222.
production from glycol and glycerol, (30) 502.	Glycerids—
relation to anthocyanin in flowers, (31) 427; (33) 427.	low molecular, of fatty acids in milk fat, (33)
Glucoxylose, new, notes, (32) 502.	of fats and oils, studies, (32) 801.
Glue-	of milk fat, (31) 804; (40) 608.
factory— refuse, analyses, (34) 521.	Glycerin—
sludge, fertilizing value, (28) 734.	action of symbiotes on, (40) 464. as source of carbon for citromyces, (30) 805.
sludge, fertilizing value, (28) 734. waste as source of lime, (38) 22.	bacterial dehydration, (35) 163.
eather as a cattle feed, (37) 171.	detection in cider vinegar, (36) 299.

Glycerin—Continued.	Glycuronic acid, isolation from sugar beets, (26)
determination, (26) 709; (40) 904. determination in—	307. Glycyrrhiza lepidota, geographical distribution,
fats and soaps, (26) 411.	(26) 335.
meat products, (29) 800. wine, (34) 506.	Glyoxylic acid, transformation into formaldehyde, (40) 507.
effect on— activity of invertase, (38) 502.	Glypta
alcoholic determinations of beverages, (34)	brevis n.sp., description, (35) 262. evetriae n.sp., description, (38) 565.
661. growth of peas, (31) 522.	Glyptoscelis alternata, notes, (35) 364. Glyptotermes satsumensis n.sp., description, (35)
plant respiration, (26) 628.	255.

blue, culture experiments, (30) 632.	cuttings, callusing, (27) 145. dead-arm disease, studies, (32) 52.
blue, seeding on ranges, (30) 35. botanical study, (26) 830.	disease, nonparasitic, studies, (39) 552. diseases and pests—
water requirement, (32) 127.	in Baden. (31) 539.
Gramineae— composition as affected by companion crop,	in Oniario, (35) 448. treatment, (38) 843.
(26) 617.	diseases—
embryology, (30) 633. first stages of development in, (28) 427.	description and control, (35) 351.
mites affecting. (32) 853.	fungus, control, (40) 750, 845. hot water treatment, (34) 50, 543.
mites affecting, (32) 853. serological study, (31) 733. Granadilla as trap for fruit flies, (29) 657.	in Barbados, (36) 541.
Granadillas, insects affecting, (27) 453.	Brazil, (32) 238. California, (37) 352.
Granaries—	France, (26) 244.
for prairie farms, (35) 690. fumigation, (30) 155.	Greece, (36) 651. Italy, (38) 351.
in relation to rural credit in Spain, (40) 389, 890.	northern Italy, (37) 52.
Granary-	São Paulo, (35) 550.
for the farm, portable, (39) 494. modern, construction, (27) 590.	Turkestan, (36) 647. Vardar, (36) 651.
weevil—	Western Australia, (33) 845.
broad nosed, fumigation experiments, (32) 650.	147, 240, 353, 643, 849; (32) 344; (33) 444;
control, (27) 258; (33) 431; (39) 862	Vartar, (30) 501. western Australia, (33) 845. notes, (26) 844; (27) 750, 848; (28) 748; (30) 147, 240, 353, 643, 849; (32) 344; (33) 444; (37) 550; (38) 849. papers on, (35) 646. relation to fog, (37) 152. studies, (28) 550; (30) 148; (32) 751; (34) 445.
in warehouses, (39) 463. notes, (26) 453; (31) 57.	papers on, (30) 040. relation to fog. (37) 152.
parasite of, (39) 468	studies, (28) 550; (30) 148; (32) 751; (34) 445.

3rape—Continued	Frape—Continued
diseases—continued.	little leaf, studies, (36) 849.
ticatment, (27) 546 (28) 748 (31) 843; (34)	marc, analyses, (32) 166.
718	marc, feeding value, (32) 567.
downy mildew	mealybug—
characteristic spots of, (*1) 51.	notes, (35) 357.
conditions determining outbreak of, (33)	remedies, (35) 54.
853.	studies, (40) 650.
development, (26) 550; (30) 247.	mildew—
notes, (28) 349, 749; (29) 350; (30) 353; (32)	and leafhoppers, combined spray for, (33)
149, 116; (35) 50, 352, 550; (36) 347; (39) 56; 151, 356, 357, 457; (40) 53, 750, 815.	642.
151, 356, 357, 457; (40) 53, 750, 845.	development, (27) 851.
propagation by wind, (25) 344.	hybrids resistant to, (33) 854.
review of investigations, (29) 249.	in southwest France, (27) 449.
studies, (26) 450, 851; (28) 54, 55, 244, 448;	notes, (31) 841; (34) 749; (36) 850; (38) 548;
(27) 49, 119, 517; (28) 54, 55; (29) 155, 849,	(40) 850.
850, (30) 452; (33) 248, 447, 519; (34) 352,	relation to smoke, (28) 152.
513, 544; (36) 545, 546, 650; (37) 151, 152,	resistant varieties, (39) 151.
251; (38) 51, 651, 754, 755; (40) 850.	studies, (33) 55.
review of investigations, (29) 249, studies, (26) 450, 551; (28) 54, 55, 244, 448; (27) 49, 419, 517; (28) 54, 55; (29) 155, 849, 850, (30) 452; (33) 248, 447, 519; (34) 352, 515, 541; (36) 545, 546, 650; (37) 151, 152, 251; (38) 51, 651, 754, 755; (40) 850, treatment, (26) 550, 750; (27) 49, 652; (28) 152, 245, 830; (29) 30, 551; (30) 50, 150, 151; (31) 151, 152, 544; (32) 145, 149; (33) 448; (34) 514, 748, 847; (35) 249, 352, 753, 754; (36) 152, 751; (37) 152, 246; (38) 51, 552, 754, 755; (40) 252, 750.	treatment, (27) 153, 851; (34) 841, 842; (38)
152, 245, 850; (20) 50, 551; (30) 50, 150, 151;	47; (40) 843.
(31) 151, 152, 544; (32) 145, 149; (33) 448;	mosaic disease, notes, (28) 650.
(34) 514, 748, 847; (35) 249, 352, 753, 754;	must, fermentation under paraffin oil, (35) 617.
(36) 152, 751; (37) 152, 246; (38) 51, 552, 754,	must, proteolytic enzym in, (27) 803.
100; (40) 202, 100.	Oldium—
dry loof discuss mater (21) 444	notes, (33) 549; (39) 356, 457; (40) 850.
fla, bostle	or powdery mildew, notes, (34) 544.
in France (30) 458	relation to weather, (34) 543.
lossor (40) 257	treatment, (28) 152; (38) 552, 651, 757; (40)
in France, (30) 458. lesser, (40) 357. notes, (29) 761; (35) 646.	252, 750.
folioge as feeding striff (20) 271	Peronospora—
foliage as feeding stuff, (30) 371. foliage, effect on development of fruit, (29) 439.	disease, studies, (31) 346.
frizzle disease, notes, (28) 550, 650.	relation to weather, (27) 547.
grav rot—	treatment, (29) 449; (30) 448.
gray rot— fixation of nitrogen by, (26) 123; (27) 225.	Pestalozzia rot, notes, (39) 52.
formation of conidia on (30) 149.	phylloxera—see also Phylloxera.
notes, (27) 851; (29) 349; (31) 544, 749, 844;	control in Italy, (38) 58.
(33) 646: (34) 847: (35) 246.	development, (35) 463; (36) 357.

540. for Texas, (37) 827. production in New York, (39) 532.	of July and August, 1916, (36) 419. of May, 1914, (32) 25. over southwestern United States, (36) 19.
seeding, (38) 33. culture— experiments, (26) 329, 422; (29) 138, 427, 736;	relation to atmospheric humidity, (29) 120. Hazel blight, treatment, (37) 755. Hazelnuts—
(33) 830. in Philippines, (30) 230. in the South, (33) 332. on a small holding, (30) 90.	culture in Mossina, (33) 540. culture in various countries, (36) 142. forcing experiments, (28) 435. gratting, (31) 443. insects affecting, (26) 246.
on granitic soils, (32) 126. on moor soils, (39) 437. cured in various ways, digestibility, (34) 371.	microscopic identification, (28) 565. notes, (35) 145. varieties, (28) 238; (30) 742; (37) 143. vield and cultural value, (26) 337.
curing, (26) 235. curing— and harvesting, (33) 38.	"Head grit" in lambs, (34) 383.
devices, (30) 191. in wet weather, (37) 180. on trucks, (39) 440.	Headache— powders, studies, (27) 365. tablets, methods of analysis, (27) 499.
damaged by rain, composition, (27) 170. digestibility, (28) 363, 463; (32) 167, 363. effect on milk and butter, (34) 570.	Headgates, designs for, (30) 85, 287. Health— administration, cooperative, in small towns,
ether and chloroform extracts of (28) 69	(32) 254. as affected by saccharin, (26) 257. biscuits, examination, (30) 664.
ether extract of, (28) 108. fall sowing, (33) 98. fall-sown, (34) 95. feeding value, (28) 574. former in the control of the co	certificates, interstate recognition of, (34) 185. public, see Public health. Heart muscle as beriberi preventive, (28) 761; (31)
fermenting power, (31) 413. fertilizer experiments, (26) 31, 422, 535, 629, 630, 725; (27) 532; (28) 121, 325, 735; (29) 228, 427,	762. Heartwood borer, notes, (28) 156. Heat—see also Temperature.
fermenting power, (31) 413. fertilizer experiments, (26) 31, 422, 535, 629, 630, 725; (27) 532; (28) 121, 325, 735; (29) 228, 427, 517, 530, 631, 728; (30) 133, 134, 428, 519, 626, 632; (31) 822; (33) 330; (34) 22, 131, 294; (35) 430, 520; (40) 134.	and disinfectants, combined action on soils, (31) 620. center of rabbits' brain, puncturing, (29) 479.
fever—relation to agmantin, (40) 608. toxins and serum, (32) 79. flour, analyses, (34) 164. from an "alkali flot," analyses, (29) 270.	conductivity of soils, (27) 215. destruction of lice and nits by, (38) 859. development by plants, (31) 323. effect on—
grain, production, (36) 436.	availability of phosphate rock, (31) 823. cane sugar dissolved in milk, (34) 164. catalytic power of soils, (28) 118.
harvesting with sweep rake, (38) 88. heating during curing, (35) 312. irrigation experiments, (29) 631. making, (27) 599; (38) 299; (39) 231, 794.	concentration of soil solution, (37) 719. creaming of milk, (36) 674. emulsin, (20) 310.
making, (27) 599; (33) 299; (33) 231, 794. making, cost data, (38) 793. making machinery in England, (38) 190. market, notes, (28) 41.	germination of seeds, (27) 220, 243. gluten, (26) 866. habits of beans, (30) 343. insect larvae, (23) 752.
marsh, digestibility, (32) 363.	insect larvae, (28) 752. insects, (27) 856. lipoids in foods, (29) 365.
meal, preparation and use, (36) 367. measuring for feed, (39) 834. measuring in stacks, (29) 532; (33) 831; (36) 227.	mineral constituents of soils, (31) 25. nutritive value of food, (37) 467. nutritive value of milk and its products,
microflora as affected by temperature, (33) 467. mixed— analyses, (28) 169.	(34) 368. peptic and tryptic proteolysis, (31) 107. peroxydiastase of wheat, (26) 866.
cost of production, (34) 137. energy value, (33) 72. mixtures, tests, (38) 830.	protozoa, (31) 26. rinderpest-immune bodies, (32) 476. sap, (31) 522, 627.
moor, causing excessive licking in cattle, (32) 567. moor, digestibility, (32) 363.	seeds and young plants, (33) 629. soil phosphorus, (27) 122. soil protected (36) 422.
native, analyses, (29) 370; (34) 467. native, digestibility, (32) 770.	soils, (26) 618; (30) 419; (32) 721; (34) 722; (35) 20, 22, 138, 515, 722.

Heat—Continued.	Heifers-Continued.
effect on—continued. specificity of precipitins, (26) 482.	dairy, wintering, (39) 783. effect of early calving, (40) 577.
starch grains, (29) 409.	factors affecting development, (31) 371; (33) 274;
trees, (31) 345; (32) 144. woody plants, (31) 343.	(35) 871; (38) 682; (40) 877. feeding experiments, (27) 871; (28) 264, 873; (32)
evolution by wounded plants, (27) 830.	_ 863; (36) 873.
from the stars, (32) 810.	French Canadian, cost of raising, (40) 775.
insecticidal value, (28) 157; (34) 253. leaf injury or loss due to, (35) 243.	open shed, v. stable for, (38) 680. pasturing experiments, (40) 471.
liberation in plant respiration, (27) 28.	raising, (36) 572.
and body surface, relation, (36) 64.	selection for milk production, (38) 74. virgin, lactation in, (28) 372.
by leaves, (28) 630.	winter teeding, (39) 482.
in physiological, bacteriological, or ferment actions, (26) 872.	winter rations for, (38) 681. Heilipus—
of the body, (32) 664; (40) 868. radiation, nocturnal, (32) 419.	bonelli, notes, (30) 454.
regulation as affected by sugar injections, (32)	bonelli, notes, (30) 454. lauri, notes, (28) 357; (39) 264.
859.	Helenium tenuifolium, toxicity, (38) 883; (40) 778, Heleniums, vaneties at Wisley, (33) 536.
regulation in man, (30) 264. relation to summer diarrhea of infants, (34) 462.	Hellantni, yields, (30) 134.
solar, seasonal variations in, (34) 415.	Helianthus— annuus, forms of, (30) 140.
transmission through building materials, (31)	annuus, water relations, (40) 427.
688; (38) 87, 492. use against—	culture experiments, (29) 331. inheritance studies, (40) 131.
bee diseases, (31) 255	spp., betains in, (27) 203.
insects, (34) 50, 653. mill insects, (30) 155	strumosus, culture experiments, (30) 632. tuberosus, varieties, (40) 827.
Heath-	tubers as a source of alcohol, (27) 616.
deformation on the seashore, (32) 825,	varieties at Wisley, (33) 536. Helicella itala, insect enemy, (39) 766.
grass, purple, ecology of, (33) 527. hens on Marthas Vincyard, (30) 248. reclamation in Netherlands, (31) 691.	Helicobasidium monipa, notes, (28) 241.
Heather, burning for grouse and sheep, (40) 667.	Helicobia nelicis, notes, (33) 749.
Heating—	Helicomyces sphoeropsidis, notes, (36) 251. Helicosporium nymphaearum n.sp., description,
and ventilation, treatise, (29) 390. by electricity, (30) 862; (32) 65; (33) 67, 461; (37)	(36) 752.
387.	Helinus ovatus, analyses and digestibility, (27) 871;(32) 167.
modern practice in, (30) 893; (31) 387.	Heliophila—
of buildings, address on, (28) 213. paper on, (31) 189.	albilinea, sec Army worm, wheat-head. diffusa, notes, (26) 59.
system, domestic, wet coal for, (38) 87.	spp. in southern Texas, (34) 453.
system, hot water, forcing circulation in, (31)	unipuncta, see Army worm. Heliothis obsoleta, see Cotton bollworm.
system, hot water, piping for, (30) 893.	Heliothrips—
systems for farm houses, (36) 491, 590; (38) 492. Hecalus lineatus, notes, (27) 559.	fasciatus— control, (39) 256.
Hectopsylla psittaci, notes, (28) 753.	internal parasite of, (26) 858.
Hedemarken Experiment Station, report, (30) 134.	on olive, (38) 157. studies, (28) 249.
formation of anthocyanin in, (30) 432.	femoralis, studies, (36) 153.
helix, intumescences in, (26) 545. Hedge—	haemorrhoidalis, see Greenhouse thrips. n.sp., description, (37) 258.
clippings as source of potash, (37) 817	phaseoli n.sp., description, (27) 757.
plants, tests, (37) 241. Hedgehog—	rubrocinctus, notes, (27) 857; (28) 250 ;(35) 254, 357; (37) 357, 461; (40) 856.
male generative cycle in, (27) 770.	rubrocinctus, studies, (28) 353,
morphology of blood, (28) 777.	sp., affecting tea, (34) 652. spp., in Trinidad, (40) 649.
Hedges— artificial, tests, (30) 134.	Heliotropism—
culture, (32) 839.	as affected by salts, (34) 333.
planting, (33) 291, 442. Hedrobracon hebetor, notes (27) 561.	in animals and plants, identity, (33) 129. negative, in Puccinia rhamni, (33) 330.
Hedychium coronarium in Brazil, (39) 638.	Helix humboldtiana, notes, (37) 755.
Hedylus spp., parasitic on fruit flies, (31) 456. Hedysarum—	Hellebore— analyses, (27) 441.
coronarium—	false, stock poisoning by, (39) 787.
as a forage crop, (32) 41. culture experiments, (30) 228, 632.	Hellula undalis, see Cabbage webworm. Helminthiasis, nodular, in cattle, studies, (28) 181,
insects affecting, (26) 147.	Helminthology, notes, (33) 152.
nitrates in, (36) 329. tests, (26) 133.	Helminthosporium— acrothecioides n.sp., description, (40) 155.
humile, analyses, (33) 466.	curvulum n.sp., notes, (37) 148.
Heeria mucronata, analyses and digestibility, (27) 871; (32) 167.	echinulatum, notes, (35) 154. gramineum—
Hegari—	notes, (28) 150; (29) 243; (32) 544; (33) 146.
culture experiments, (39) 434; (40) 433. dwarf, culture in eastern Oregon, (38) 432.	studies, (30) 846.
Heifers—	studies, (30) 340. treatment, (29) 845; (32) 145, 341; (35) 47; (36) 247; (37) 247.
age for breeding, (31) 371. as affected by plane of nutrition, (35) 868.	infection of wheat by, (26) 747. mayaguezense n.sp. on Paspalum, (39) 248.
breeding, development, (40) 369.	n.spp., descriptions, (27) 848.
care and management, (34) 471.	oryzae, notes, (28) 647. sacchari—
conformation in relation to future production, (39) 782.	n.sp., description, (30) 650.
cost of raising, (33) 765; (34) 470; (36) 76, 872; (38) 176; (39) 782.	n ofes, (34) 49; (40) 157. studies, (38) 851.

                                                                                                                                                                                                                                                                              Hydnum—coralloides, fruiting forms, (32) 341.
coralloides, notes, (27) 653.
septentrionale, notes, (28) 56.
Hydracids, effect on starch, (26) 107.
Hydraceis micacea as a garden pest, (35) 853.
                                                                                                                                                                                                                                                                                Hydraulic-
                                                                                                                                                                                                                                                                                                 computations, definitions and equivalents, (28) 186.
                      sugar, preparation, (36) 625. sugar, relation to soil "sickness," (28) 520.
                                                                                                                                                                                                                                                                                                 conversion tables and equivalents, (38) 187. development and equipment, treatise, (37) 287. ram, automatic, description, (27) 386. ram, notes, (31) 291.
   Hunger—
control in health and disease, treatise, (36) 363.
nature of, (33) 566.
sensation of, (28) 864.
studies, (37) 166; (40) 270.
theories concarning, (27) 270.
Hunterellus hookeri—
life history, (26) 863.
notes, (37) 360.
                                                                                                                                                                                                                                                                                                  rams
                                                                                                                                                                                                                                                                                                                     construction and operation, (34) 885.
for farm water supplies, (35) 294.
installation and operation, (27) 589; (32) 87.
investigations, (28) 683
```

Hydraulic-Continued.	Hydrocyanic acid—Continued.
rams—continued	gas—continued.
notes, (27) 292.	insecticidal value, (34) 252.
types of, (36) 89. Hydraulics—	poisoning by, (39) 161.
in United States, (27) 188.	toxicity, (26) 864. use against household insects, (32) 846; (34)
primer, (27) 385.	854.
problems, notes, (27) 789.	use against mill insects, (30) 155.
textbook, (37) 584.	in Cassava, (33) 260, 665; (37) 168.
treatise, (28) 288, 588; (31) 383, 587; (35) 786. Hydrazin—	cherry laurel, studies, (29) 133.
effect on blood fat and blood sugar, (36) 164.	flax, (28) 477; (30) 380. flaxseed screenings, (26) 86.
sulphate, effect on hemolytic reaction, (36) 878.	fungi, (26) 228.
Hydrellia griseola, notes, (27) 560.	grains in hot regions, (30) 30.
Hydrin, effect on butter and margarin, (26) 778.	haricot beans, (33) 866.
Hydriodic acid salts, use against tuberculosis, (29) 481.	Isopyrum spp., (39) 27. Johnson grass, (29) 869.
Hydriomena spp., in Vancouver Island, (34) 651.	kafir and sorghum, (30) 584.
Hydrocampa (Nymphula) nymphaeata, notes, (37)	leguminous plants, (37) 28.
847.	Ornithopus spp. (34) 525
Hydrocarbons—	plants, (27) 635; (28) 36, 429; (29) 713; (31) 520; (39) 332.
determination, (28) 511. fatty, development of fungion, (29) 133.	520; (39) 332.
heavy, detection, (29) 529.	seed and stone fruits, (27) 11. sorghum, (27) 77; (33) 234; (35) 340; (40) 804
isolation from plants, (26) 106.	Tridens flavus, (35) 413
petroleum, absorption in the intestine, (29) 768.	white clover, (30) 36.
Hydrochelidon nigra surinamensis, notes, (27) 355.	liberation from linseed, (35) 167.
Hydrochinon, effect on cyanogen formation in	production by bacteria, (30) 802.
plants, (28) 527. Hydrochloric acid—	relation to maturity of almonds, (26) 228. rôle in plants, (28) 128.
effect on—	utilization by plants, (31) 730.
action of maltase, (28) 504.	Hydroecia micacea, notes, (26) 353.
bread fermentation, (27) 268.	Hydroelectric—
hemolytic reaction, (36) 878.	development at Tallulah Falls, Ga., (27, 316,
mineral excretion of dogs, (38) 570. plants, (37) 224.	development in California, (34), 682.
rotatory power of sucrose and invert sugar,	energy for irrigation pumping, (27) 889.
(37) 802.	power, treatise, (36) 783. works in United States, (27) 188.
sprouting of potatoes, (32) 829.	
estimation, colorimetric scale for, (40) 505.	Hydrogen— analysis, apparatus for, (40) 111.
forcing plants with, (28) 837. leaf injury or loss due to, (35) 243.	chlorid gas, effect on diastase and invertase, (31)
salts, use against tuberculosis, (29) 481.	806.
toxicity, (28) 662.	cyanid, detection, (26) 206.
Hydrochloroplatinic acid, preparation, (37) 409.	cyanid, determination, (28) 310.
Hydrocyanic acid—	cyanid, in bird's foot clover, (27) 30. determination, (37) 803.
determination, (32) 300; (34) 11; (35) 413, 503; (40) 804.	dioxid, effect on soils, (28) 123,
determination in—	dioxid solutions, examination, (27) 208. electrode, description, (34) 712, 804.
beans, (27) 310; (36) 714.	electrode, description, (34) 712, 804.
feeding stuffs, (33) 506.	electrode potential as affected by pressure, (36)
plants, (30) 709.	503. peroxid—
sorghum, (37) 113. effect on—	 action on lactic acid and glucose. (28) 202.
catalytic power of soils, (28) 118.	as food preservative, (30) 364. as oxidizer, (37) 409. as seed sterilizer, (29) 844.
hydrolysis in plants, (26) 531.	as oxidizer, (37) 409.
plants, (39) 224; (40) 745.	detection in milk, (34) 507.
evolution from laurel leaves, (26) 228.	peroxid, effect on—
evolution from linseed meal, (27) 276. for fumigation, preparation, (39) 161.	ampless of human mills (20) 211
formation—	autolysis of plant proteins, (26) 801.
from proteins, (30) 802.	autolysis of plant proteins, (26) 801. ferments, (25) 112.
in feeding stuffs, (28) 377.	germination of seeds, (26) 820; (27) 201. glycerol, (29) 309.
linseed cake, (28) 377, 378.	guaiac reaction in milk, (27) 507.
plants, (31) 826. seeds, (27) 132; (35) 332.	invert sugar, (27) 812.
fumigation of plants with, (31) 57.	milk, (29) 806.
gas—	milk tests for formaldehyde, (30) 414. seeds, (27) 132.
as fumigant, (35) 53. as soil fumigant, (32) 245; (38) 457.	peroxid, hydrolytic action, (27) 712.
detection, (38) 258.	peroxid, persistence in milk, (35) 11.
gas, effect on—	peroxid, saccharification of starch by, (28) 19,
baking quality of flour, (26) 357.	609. preparation and purification, (40) 607.
cotton, (35) 254.	sulphid—
cucumbers, (30) 142.	effect on concrete, (28) 589.
insects and plants, (37) 660. leaf-roller eggs. (40) 162.	generator, description, (39) 714.
leaf-roller eggs, (40) 162. plants, (33) 522; (38) 330.	precipitation under pressure, (37) 712.
scale insect eggs, (33) 855.	Hydrogenation— catalytic, in presence of carbon monoxid, (38)
subterranean larvae, (40) 256.	409.
tobacco, (31) 747. gas—	of oils, treatise, (32) 416.
furnigating greenhouses with, (29) 41.	Hydrogen-ion concentration-
fumigating machines for, (33) 556. fumigation, (27) 356; (28) 352; (29) 640; (34)	determination, (35) 110; (36) 13, 111; (37) 50 6;
fumigation, (27) 356; (28) 352; (29) 640; (34)	(38) 225; (39) 9.
653; (35) 678; (38) 155, 158, 458.	effect on germination of Gramineae, (38) 24. effect on growth of barley seedlings, (38) 736.
generation by portable machines, (34) 191. generator, (39) 256.	treatise. (32) 801.
G	

Hydrogen-ions, effect on—	Hymenochaete— agglutinans, parasitism. (32) 640.
baking quality of flour, (27) 166. metabolism of Aspergillus niger, (30) 630.	noxia, notes. (26) 851; (27) 451; (28) 241; (29)
Hydrolysis, effect on nitrogen distribution in norm,	noxia, notes. (26) 851; (27) 451; (28) 241; (29) 647, 749; (31) 55; (33) 449, 741; (34) 442, 540, 744, 849; (35) 45, 251, 551; (36) 347, 746, 846, 851, 852; (33) 52, 53, 354; (39) 153, 849; (40)
(38) 310. Hydrolyging agents affect on starch (26) 107	744, 849; (30) 40, 201, 001; (30) 347, 746, 846, 851, 859; (38) 52, 53, 354; (39) 153, 840; (40)
Hydrolyzing agents, effect on starch, (26) 107. Hydrometeors, classification, (36) 19; (37) 115.	53, 249, 349.
Hydrometer for latex, (31) 444; (32) 48.	noxia on cacao roots. (37) 349.
Hydrophilus piceus, digestive ferments of, (28) 657. Hydrophobia, see Rabies.	noxia, on tea roots, (37) 52. noxia, treatment. (29) 552.
Hydroquinone—	rubiginosa, studies, (32) 845.
effect on soil microorganisms, (31) 27.	Hymenolepis—
sterilization of soils by, (32) 816. utilization by plants, (36) 329.	diminuta and H. nana siebold. life history, (37)
Hydroscaphidae, catalogue, (26) 560.	n.spp., descriptions, (26) 561.
Hydrotaea—	spp., dissemination by flies. (30) 659.
dentipes, studies, (30) 457, 552.	Hymenomycetes—
meteorica ili North America, (35) 759.	association with woody forest plants, (37) 727.
Hydrotaeas, new, (40) 263.	fruiting bodies, vitality, (30) 350. on fruit trees, (37) 47.
meteorica in North America, (35) 759. spp., studies, (37) 764. Hydrotaeas, new, (40) 263. Hydrotopism in lupine roots, (34) 223. α-bydroxybehenic acid, notes, (31) 312.	relation to Uredinales, (28) 244.
β -Hydroxyglutamic acid, structure, (40) 611.	Hymenoptera—
Hydroxylamin—	American. notes, (36) 261.
assimilation by plants, (26) 32.	chalcidoid, notes, (36) 60. chalcidoidea, Australian, (39) 154.
hydrochlorid, assimilation by plants, (26) 32.	described by Abbé Provancher, lectotypes of,
Hydroxyl-ion concentration, effect on growth of barley seedlings. (38) 736.	(39) 663.
barley seedlings, (38) 736. Hydroxyl-ions, effect on clay, (31) 216; (32) 318.	description, (36) 759. leaf oviposition, (37) 162.
w-Hydroxymetnyl turturaldenyde, production from	microsporidiosis in, (27) 450.
carbohydrates, (34) 11.	new, (26) 63; (30) 59, 661, 758; (31) 355; (36) 260. new pteromalid chalcidoid genus from North

californica quercina—	feeding stuff, (32) 68.
description, (30) 644.	grain crop, (29) 738.
mutation in. (34) 236.	suage crop, (38) 630; (39) 33, 134; (40) 330.
origin, (32) 46.	asn analyses, (29) 861.
nigra, development of fat in, (30) 411.	beams, cureure initial in a farming, (50) 350.
regia as a food adulterant, (26) 888. regia, utilization of wood, (28) 544.	beans, varieties, (30) 435.
Juglone, detection in walnuts, (30) 412.	breeding experiments, (39) 736.
Juice heaters, vacuum, studies, (36) 387.	chop, analyses, (26) 467; (28) 465; (34) 169, 467 (36) 765; (38) 369; (39) 370; (40) 571.
Jujubes—	chop, digestibility, (31) 863.
culture in China, (38) 446.	covered kernel smut on, (39) 756.
culture in southern Texas, (32) 539.	culture, (32) 226.
Julus hortensis, notes, (28) 554.	culture and use. (32) 40.
Junco hyemalis—	milture experiments (27) 520 (28) 529 (20) 225
coccidiosis in, (26) 187.	426; (30) 632; (32) 526; (33) 32; (34) 630; (35) 829; (36) 131; (37) 132, 331, 730; (38) 631, 829 831; (39) 129, 434; (40) 32, 624.
destruction of grain aphids by, (29) 453.	829; (36) 131; (37) 132, 331, 730; (38) 631, 829
Juneus-	831; (39) 129, 434; (40) 32, 624.
balticus, analyses, (29) 270.	culture in-
balticus, digestibility, (32) 770.	Arizona, (32) 226.
effusus as a litter for cows, (35) 175.	Guam, (40) 327.
June beetle—see also Lachnosterna and Phyllo- phaga.	Montana, (33) 526.
bacterial disease of, (32) 61.	southern Great Plains area, (33) 332.
green, notes, (33) 57.	Texas Panhandle, (29) 429; (35) 440. depth of plowing tests, (40) 624.

	Kala-azar—
digestibility and productive value (37) \$65	canine and human, relation, (32) 31. induced development of, (33) \$62.
drought resistance of, (28) 633.	induced development of, (33) 562, monograph, (39) 683, notes, (27) 55. parasite, development, (28) 655, prevalence in India, (28) 655, studies, (37) 357.
dwarf, digestibility, (36) 660.	notes, (27) 55.
fats and fatty acids of, (38) 410.	parasite, development, (28) 655.
fertilizer experiments (31) 421: (40) 63.278.	prevalence in India, (28) 655.
flour bread, tests. (27) 63.	transmission by healthnes (26) 760
fodder, chloroform extract of, (31) 71.	transmission by bedbugs, (26) 760. transmission by blood-sucking insects, (25, 170.
fodder, composition, (27) 668.	Kaianchoe paniculata, analyses and digesticility.
fodder, composition, (27) 668. fodder, digestibility, (27) 669; (37) 168. from South Africa, analyses, (34) 530.	_(32) 107.
	as forage crop, (39) 33S.
grain smut, notes, (29) 547. graphic summary of seasonal work, (39, 495.	
graphic summary of seasonal work, (39, 495.	coccinellids affecting, (33) 256.
growing with legumes, (40) 822.	cooperative experiments, (29) 138.
hydrocyanic acid in. (30) 584.	culture for force (33) 24 +32
growing with legumes, (40) 822. head chop, analyses, (31) 863. hydrocyanic acid in, (30) 584. improvement, (40) 737.	culture for winter forage, (38) 735.
inosite buosphoric acids of (59) 14.	outin, as tage or of refer, (33) 256. cocinellids affecting, (33) 256. cooperative experiments, (29) 138. culture experiments, (32) 132; (36) 436. culture for forage, (33) 24, 532. culture for winter forage, (38) 735. fertilizer experiments, (26) 831; (30) 532; (32) 547; (35) 235; (36, 425.
kernel, physical and chemical study, (39) 164.	(35) 235; (36, 425,
leaves, variation of water and dry matter in, (37) 637.	lightning mury to. (38) 149
meal, analyses, (31) 863; (36) 765. melon, analyses, (32) 166. milling and baking tests, (40) 361.	irrigation exper.ments, (32: 196. lightning injury to, (38) 149. marrow-stem, culture experiments, (36) 735, pollunation experiments, (35) 742
melon, analyses, (32) 166.	pollination experiments, (35) 342.
milling and baking tests, (40) 361.	Ragged Jack, notes, (27) 435.
mineral constituents, digestibility, (40) 769. notes, (26) 362; (31) 333.	polluration experiments, (35) 742. Ragged Jack, notes, (27) 445. root-louse injury, (40) 60. sea, cooking, (31) 856.
mineral constituents, digestibility, (40) 769. notes, (26) 362; (31) 333. nutritive value and use in the diet, (29) 864. orange, notes, (30) 145. soore card for, (31) 832. seeding experiments, (38) 630; (40) 522. silage for calves, (39) 71. smut, description and treatment, (32) 146. starch content. (35) 108.	seed, growing, (40) 340. seed, home-grown, (38) 298. seed selection, (32) 827. seed, vitality, (27) 740. thousand-headed—
orange, notes, (30) 145.	seed, home-grown, (38) 298.
score card for, (31) 832.	seed selection, (32) 827.
silage for calves. (39) 71.	thousand-headed—
smut, description and treatment, (32) 146.	as forage crop, (38) \$27.
starch content, (35) 103. use in bread making, (34) 67. varieties, (37) 338; (39) 33. varieties for central and southern Great Plains,	culture, (27) 340; (32) 226.
use in Dread making, (34) 57.	culture experiments, (28) 531; (30) 632.
varieties for central and southern Great Plains.	v. marrow cabbage, (32) 827.
(35) 832.	varieties, (29) 530; (31) 829.
(35) \$32. varieties for Silage, (39) 134. varieties for Texas, (39) 838. water requirements, (32) 335. weight of heads, relation to number of whorls, (40) 830.	thousand-headed— as forage crop, (38) \$27. culture, (27) 340; (32) 226. culture experiments, (28) 531; (30) 632. culture on muck soils, (33) 33. v. marrow cabbage, (32) \$27. varieties, (26) 530; (31) 829. varieties, (26) 631, 835; (27) 32; (31) 829; (33) 38 Kaliofenusa ulmi, notes, (27) 658. Kaliosyshinga—
water requirements, (32) 335.	Kaliosysphinga—
weight of heads, relation to number of whorls,	dohrnii, notes, (32) 550.
(40) 330.	dohrnii, notes, (32) 550. ulmi—see also Kaliofenusa ulmi.
weight ratios, (36) 131. wilting coefficient, (32) 335. yields, (40) 330, 331.	life history and remedies, (29) 557. notes, (28) 57, 351. Kalmia latifolia, leaf blight of, (39) 253
vields, (40) 330, 331.	Kalmia latifolia leaf blight of /30) 253
yields of stover, (40) 550.	K STIPSTOO-
Kafirin	botfly, notes, (29) 761. grass, analyses, (27) 499; (30) 565. Kanker-bosje, culture experiments, (30) 632. Kanona tankage, availability of nitrogen in, (35)
chemistry of, (37) 8. hydrolysis, (40) 110.	grass, analyses, (27) 469; (30) 565.
nutritive properties. (38) 570.	Kanona tankage, availability of nitrogen in. (35)
nutritive properties, (38) 570. Kaing grass, microscopy of pulp, (27) 315.	421.
Kotnit	K.3HS3S—
composition, (27) 422; (28) 819. destruction of weeds by, (29) 215; (31) 532, 739; (32) 138; (35) 340; (36) 639; (37) 446. effect on—	College— alumni record, (32) 895.
(32) 138; (35) 340; (36) 639; (37) 446.	history and growth, (30) 297.

Lach serma-Continued.	Lactic acia—Continueu
1 it u.lis, notes, (27) 657. ievision, (35) 467.	in corn silage, (29) 712. honey, (26) 25; (28) 196. sisal, (29) 615.
spp, bacterial disease of, (32) G1.	noney, (26) 25; (28) 196.
spp, hapits and control, (39) 595.	sour milk, (39, 613.
spr, notes, (26) 60; (29) 52, 561; (30) 636; (33)	wine, (31) 315.
51; (36) 753. Spp. oviposition, (38) 761.	odoform reaction of, (30) 414.
studies, (35) 700.	rôle in digestion, (36) 763. starters, preparation and propagation, (49) 70
tr stis, life history, (29) 359. Lachnus—	starters, preparation and propagation, (4), 7,1
curvipes n.sp., description, (28) 60.	thiophene test for, (40) 114. use in bread making, (33) 861.
glehnus n.sp , description, (35) 56.	volatility of, (30) 707.
juniperi. notes, (27) 255. juniperivora n.sp., description, (40) 651.	Lactic— ferment cultures in cheese making, (31, 375.
parvus, new genus for, (40) 651. persicae, remedies, (31) 155.	ferment, keeping, (31) 375.
persicae, remedies, (31) 155.	fermentation, action of mixtures of salts on, 14
viminalis, notes, (33) 554. Lacquers, methods of examination, (29) 811.	581. ferments—
Lactade, manufacture and use, (40) 379.	and streptococci, action of antiseptics on,
Lactalhumin— composition, (38) 505.	(38) 77.
determination in milk, (33) 16.	as affected by temperature, (35) 452. effect on milk protein, (33) 714
determination in milk, (33) 16. hydrolysis products of, (33) 867.	habituation to poisons, (33) 803.
lysin content, (31) 559.	in therapy, (39) 99. pharmaceutical, bacterial content, (27) 174.
relation to color of milk fat, (31) 275. tryptophan in, (28) 411. value for growth, (37) 864, 865.	use, (27) 170.
value for growth, (37) 864, 865.	organism products, effect on Bacillus typhosus,
Lacterius piperatus, composition, (26) 802.	(26) 776 starters, tests, (35) 176.
in alfalfa, (32) 411.	Lacto, preparation, (30) 61.
of mammary glands, (30) 204.	Lactoantiserum, use, (30) 112.
Lactation— early, effect on development of animals, (33) 265.	Lactobacillus fermentum, studies, (35) 278. Lactochrome, investigations, (32) 19.
effect on growth, (40) 877.	Lactoglobulin—
period, metabolism during, (31) 663. Lactescence in plants, (32) 130.	composition, (38) 505.
Lactic acid—	relation to serum proteins, (37) 8. Lactose—
as affected by—	absorption in the intestines, (28) 763.
hydrogen peroxid, (28) 202. ultraviolet rays, (28) 201.	acetylated derivatives, optical rotatory powers,
beculus, Bulgarian, notes, (28) 777.	(36) 202. antiscorbutic potency, (40) 464.
bacillus in butter, notes, (26) 478.	as protective agent for invertase, (26) 504.
bacteria— as affected by acid-destroying yeasts, (29) 8.	determination, (26) 709; (34) 611; (39) 315; (40, 507.
as affected by proteolytic products of auto-	determination—
lyzed yeast, (39) 10.	after heating and addition of sodium bicar-
biological properties, (31) 506. classification, (28) 75; (34) 76.	bonate, (40) 613. in milk, (27) 506; (28) 205; (30) 414, 508; (33, 503; (34) 506; (38) 615. in milk chocolate, (40) 14.
classification and nomencial are, (55) 178.	503; (34) 506; (38) 615.
cultures, dried, preparation, (31) 773.	in milk chocolate, (40) 14.
development in mak, (29) 1/2; (30) 4/5, 502.	ammonia production and use in killed
effect on silage, (35) 373. formation of p-oxyphenylethylamin by,	ammonia production and use in killed plants, (28) 327.
(32) 503.	ammonification, (28) 718. infant digestion, (33) 663. intestinal flora, (36) 664.
forms of, (29) 475.	intestinal flora, (36) 664.
heat resistance, (39) 78.	plant respiration, (26) 629. examination, (26) 313; (27) 411.
in dairy products, (28) 276. in milk, origin, (34) 473.	extraction from milk serum, (26) 276.
in pasteurized milk, (36) 674. proteoglastic power. (36) 673.	free extract as factor in milk judging, (39) 111.
proteolytic activity in milk, (36) 476.	heat of combustion, (28) 160. heated, nutritive value, (34) 369.
proteolytic activity in milk, (36) 476. reciprocal action of, (28) 276.	industrial manufacture, (40) 415.
relation to keeping qualities of butter, (39)	manufacture from milk, (30) 378.
resistance to pastcurization, (33) 675.	ongin in milk, (30: 204. resorption in small intestine, (29) 268.
use in ensiting heet tons (34) 767	separation from galactose and plucose, (26, 202.
use in pickling cucumbers, (28) 616. use in silage making, (32) 567, 767. behavior in beef extract, (26) 408. behavior toward oxiditing events (28) 25	utilization by green plants, (32) 823. Lactuca—
behavior in beef extract, (26) 408.	scariola, leaf position, (28) 228.
	spp., rubber from. (29) 241.
decomposition by yeasts, (37) 202. determination, (27) 498.	aphis eating, preservation, (26) 253.
Gerermination in-	ashy-gray, notes, (31) 751, beneficial, in Piedmont, Italy, (28) 757.
biological products, (36) 808. organic substances, (32) 114. presence of protein, (29) 309.	beneficial, in Piedmont, Italy, (28) 757.
presence of protein, (29) 309.	biology, (30) 754. collecting, (27) 361.
tomato products, (26) 25.	common eastern, introduction, (32) 846.
tomato products, (26) 25. urine, (34) 613. wine, (29) 119.	common, notes, (32) 654.
effect on—	common eastern, introduction, (32) 846. common, notes, (32) 654. control of aphids by, (34) 555; (39) 663. corrupted, notes, (29) 453. destruction by white tuneurs, (26) 454.
baking quality of flour, (37) 861.	destruction by white fungus, (26) 454. destructive to citrus plant lice, (26) 755.
bread fermentation, (27) 268. hemolytic reaction, (36) 878.	uestructive to citrus plant lice, (26) 755.
plants, (37) 224.	injurious to potatoes, (30) 255. introduction into California, (34) 361. introduction into Florida, (39) 461.
extraction with ether, (37) 414.	introduction into Florida, (39) 461.
ferment therapy, description, (26) 173. formation in incubated eggs, (28) 564, 711.	life history, (33) 562. life history and habits, (34) 555.
germicidal effect in milk, (33) 450.	notes, (27) 581; (29) 281.

dy beetles—Continued. of Connecticut, (36, 856.	Lambs-Continued.
of Gregon, (39) 357	querter—continued. dissemination by farm unimals, (26 885.
oriental, introduction into Peru, (28) 176	water requirement, '32, 127. range, cost of fattening, (29) 572. rougheges for, '35, 293. searing iron v. Irnife for detailing, (29) 470. self feeders and feeding yards for, (29) 872.
parasitic on orange scale, (28) 554. rare, (33) 58.	range, cost of lattening, (29) 572.
selection and breeding, (38) 558.	searing iron v. knife for detailing, (29) 470.
two-spotted, notes. (30) 657.	self feeders and feeding yards for, (29) 872.
echidninus, distribution on rats, (shipping and marketing, (25, 672. unborn, disease of, (24) 275. winter production, '429' 468. winter-fed, loss of, (26, 299.
echidninus, notes, (32) 353.	winter production, '32' 468.
multispinosus, notes, (34) 66. n sp., description, (35) 264.	worm intestation, (3/1 5/4,
emobothrum intermedium n.sp., description (38) 761.	Lamellicornia of British India, (49) 63. Lameness in horses, treatise, (36) 280.
Laemontioeus sp., studies. (37) 256.	Laminaria-

52831-26†---22

Lecithin-Continued.	Legumes-Continued.
synthesis in hens, (26) 269. therapeutic use, (27) 67. "L'eclair bleu" reaction, studies, (40) 311.	water requirements, 13x 227.
therapeutic use, (27) 67.	wild, culture experiments, (34) 736
"L'eclair bleu" reaction, studies, (40) 311.	Leguminosae-
Lecythis charm, fungi anecting, (25) 550.	comparative morphology, (31 621.
Leeches, notes, (33) 659. Leeks—	composition as affected by compan on crop (25) 517.
cooking, (31) 856.	
thrips affecting, (32) 553.	economic value, treatise, (37) 28. nodule bacteria of. (32) 727.
wild, occurrence of arsenic in, (27) 269.	seedling structure in, (28) 38.
Leersia hexandra, notes, (26) 362; (30) 230. Lees, lead arsenate in, (27) 243.	serological study, (31) 733.
Lees, lead arsenate in, (27) 243. Leghorns, treatise, (28) 774.	specialization of nodule bacteria of, (29) 733. tannin content, (30) 227.
Legume—	treatise, (31) 523.
anthracnose, notes, (39) 146; (40) 48.	Leguminous-
bacteria and nonlegume plants, symbiosis, (37)	cover crops for Guam, (40) 328.
819.	crops for no-thern Wisconsin, (28) 738.
cultures, distribution, (28) 476. diseases in Switzerland, (37) 47.	plants— and cereals, associative growth, (28) 720.
diseases, notes, (39) 353.	as green manure, (37) 320.
diseases, studies, (33) 547. pod maggot, studies, (27) 553. pod moth, studies, (27) 552.	assimilation of nitrogen by, (30) 435; (31)
pod maggot, studies, (27) 553.	131, 523.
pod moth, studies, (27) 552.	hreeding emeriments, (29) 138, 139; (31) 830.
proteins, unitation (20) 504.	classification of varieties, (27) 31. culture, (26, 830; '32) 430.
seeds, abortive position in pod. (40) 521.	plants, culture—
seeds, hard, germination, (35) 835.	continuous, (31) 226.
proteins, utilization (26) 564. seed, investigations, (40) 39. seeds, abortive position in pod, (40) 521. seeds, hard, garmination, (35) 835. seeds, ripening, (35) 523. straw. feeding value, (38) 168.	experiments, (27) 32; (29° 631; (30) 828; (31)
	628, 733; (37) 330. in Brazil, (29) 428.
Legumes— analyses, (31) 829.	India, (29) 736.
anatomical structure, (28) 660.	Mexico. (32) 131.
and flaxseed combinations, preparation, (38)	Mexico, (32) 131. North Carolina, (31) 132.
365.	plants, effect on—
and nonlegumes, associative growth, (32) 432;	associated nonlegumes, (37) 438.
(40) 821. and nonlegumes, effect of association, (33) 527.	nitrogen content of soils, (31) 733.
as affected by sodium chlorid, (40) 434.	soil bacteria, (37) 121 plants—
food, (34) 164.	embryology, (30) 633.
green manure, (35) 517; (38) 231.	fertilizer experiments, (26) 424, 725; (29) 227
orchard cover crops, (28) 144.	(31) 132, 628, 733; (32) 37,
pasture crops, (39) 130. creatinin in, (32) 560. culture, (39) 834; (40) 39.	fertilizing value, (29) 820; (30) 125; (37) 214
culture. (39) 834: (40) 39.	fertilizing value of above-ground parts, (31)
culture experiments, (33) 31, 227; (84) 228, 736;	formation of nitrogen by, (26) 7
(38) 526, 527, 634.	formation of nitrogen by, (26) 7 fungicidal treatment, (29) 328,22.
culture on moor soils, (39) 438.	growth in acetylene gas, (27) 827. illustrated lecture on, (37) 194.
decomposition in soil, (40) 214.	ingests effecting (27) 155 (22) 754
digestibility, (33) 361. dried, cooking, (40) 360.	insects affecting, (27) 155; (32) 754. irrigation experiments, (37) 639.
effect on—	methods of variety testing, (28) 436.
composition of cereals, (34) 230.	new, analyses and feeding value, (29) 467.
quality of butter, (29) 278.	nitrates in, (36) 329.
soil acidity, (38) 20.	nitrogen assimilation by, (29) 326.
soil nitrogen, (26) 196. exhibits for farm and school use, (29) 93.	nitrogenous fertilizers for, (37) 134. notes, (26) 882.
fertilizer experiments, (38) 527,	pollination experiments, (37) 734.
(40) 429.	potash fertilizers for, (32) 228.
fungoid and insect pests, (40) 747.	production in New York, (39) 532.
growth and nitrogen-fixing power on acid soils, (36) 514.	root systems of, (31) 830. root tubercles, see Root tubercles.
growth as affected by manganese sulphate, (33)	seed color variation in, (37) 334.
820.	treatise, (32) 432.
hybridization experiments, (34) 228. importance for milch cows, (38) 779.	tubercle bacteria of, (26) 824.
in decert cariculture (38) 220	value in agriculture, (36) 635.
in desert agriculture, (38) 230, (32) inoculation, (29) 142, 228, 326; (31) 131, 330; (32) 428; (39) 116, 232, 338, 439, 723, 813; (40) 215, 719, 736, 822.	varieties, (29) 138, 427, 631; (30) 525, 828; (31) 524, 623, 733; (32) 37. seeds, germination tests, (36) 437. seeds, hard, germinability, (34) 225.
423; (39) 116, 232, 338, 439, 723, 813; (40) 215,	seeds, germination tests, (36) 437.
719, 736, 822.	seeds, hard, germinability, (34) 225.
inoculation experiments, (26) 322; (27) 322, 419, 531; (29) 316; (30) 335; (31) 524; (32) 630, 818; (35) 322, 727.	Deguming—
(35) 322, 727	in peas, (40) 607.
liming experiments, (36) 229.	lysin content, (31) 559. Leidyana tinei n.sp., description, (39) 659.
nitrogen assimilation by, (33) 426.	Leiognathus morsitans—
merogen teranization, (21)	n.sp., description, (35) 263.
nitrogen fertilization v. inoculation, (35) 517.	notes, (37) 360.
nitrogen fixation by, (26) 37; (38) 528. nodule bacteria of, (33) 823.	Leiomerus granicollis n.sp., description, (37) 58. Leishmania—
pentosans of, (34) 168.	donovani, development in mosquitoes, (26) 656
preservation, treatise, (29) 116.	photomicrographs of, (29) 478,
production in Spain, (30) 791; (85) 393; (37)	relation to Pulex serraticeps, (28) 185.
827; (40) 793.	Leishmaniasis—
purin content, (40) 205. relation to beriberi, (27) 461.	in Yucatan, (27) 782.
selection experiments, (35) 334.	Induced development of, (33) 862. notes, (35) 75, 464.
silage from, (38) 636.	transmission by fleas, (36) 654.
stachvose in. (28) 761: (31) 13.	Leishmanioses, monograph (39) 683.
use II ilie dietary, (29) 862.	Lema melanopus—
use in the dietary, (29) 862. varieties, (26) 424; (28) 828; (31) 829; (34) 736; (35) 134; (38) 634.)	life history and control, (34) 857. notes, (31) 654.

Lemen -	Lemurs, chicmetin bou is in er; throcytes of, (29)
birk blotch, notes, (31) 244. olack pit, description, (29) 659.	Lens esculenta as a creen manure, (35, 31.
tlack pit, studies, (30) 652.	Lentil-
brown rot gum disease, studies, (32) 55.	flour, digestibility of protein, (33) 564.
brown rot, notes, (37) 656. cottony rot, notes, (36) 452.	seeds, disinfection experiments, (31, 738, seeds, oil content, (27, 716.
cottony rot. studies, (34) 749.	starch, studies, (31, 525.
cottony rot. studies, (34) 749. cur.ng rooms, humidifier for, (36) 842.	Lentils—
die-back, cause, (31) 450. disease, notes, (39) 753.	analyses. (28 400; (29) 550.
liseases, investigations, (32) 208.	culture, (36) .37. culture experiments, (28) 735.
diseases, notes, (29, 243.	description and agricultural value, Co.) 635.
essence, analytical methods and standard for,	d'gestibility, (32) 168.
(30) 558. extract, analyses, (35) 663.	Egyptian, notes. (28) 532. fertilizer experiments. (26) 631; (31) 133.
extract, methods of analysis, (35) 417.	fertilicing value, (26) 233
extract, terpeneless, studies, (26) 462.	germination as anected by depth of planting
grass oil, constants of, (36) 319. grass oil, production in United States, (36) 538;	(36) 437. permination as affected by Roentgen rays.
(37) 546.	(28) 128.
"green spot," studies, (35) 144. groves, damage by cold, (40) 342.	insects affecting, '29, 853 phosphorus content, '27, 461.
groves, heating, (40) 540.	prevention of heriberi hy, (28) 761; (31) 762.
gum disease, notes, (27) 546; (32) 53.	sprouting capacity relation to antiscorbution
gum diseases, treatment, (34) 240. gummosis, causal agents, (30) 51.	sprouting capacity relation to antiscorbution value, (39) 470.
	varieties, (26) 631; (31) 133. Lentinus—
gummosis, studies, (33) 550.	lepideus, notes, (27) 653.
gummosis, treatment, (39) 758.	spp., pseudosclerotia of, (35) 251.
industry in Camornia, (29) 440.	Lenzites sepiaria—
juice, antiscorbutic factor, (40) 364, 869.	effect on greenheart, (34) 56. enzymatic activity, (37) 129.
juice, osmotic pressure, (28) 262.	studies, (40) 350. wood decay induced by, (37) 727.
gummosis, studies, (33) 550. gummosis, studies, (33) 550. gummosis, treatment, (39) 758. industry in California, (29) 440. industry in Italy, (28) 437. julce, antiscorbutic factor, (40) 364, 869. juice, osmotic pressure, (28) 262. juice, preparation, (33) 316. mottled leaf, cause, (27) 251. oil adulteration, detection, (26) 312; (27) 207. peel. betains in, (27) 204.	Wood decay induced by, (37) 727.
oil adulteration, detection, (26) 312; (27) 207.	Leontodon hirtus, description, (35) 642. Leopard moth—
	description, (35) 55.
peel, candied, manufacture and analyses, (27)	injurious to apples, (26) 150.
rots, life history and treatment, (28) 245.	life history and remedies, (28) 253.
scab, notes, (31) 539, 645.	notes, (26) 856; (28) 57, 351; (30) 455; (34) 755 remedies, (31) 652.
scab, studies, (36) 353.	remedies, (31) 652. studies, (26) 556: (27) 658.
seeds, agglutinating properties, (31) 774. seeds, notes, (32) 613.	wood, notes, (28) 353.
skins, analyses, (38) 626. skins, isolation of fat from, (29) 459.	Lepidiota—
skins, isolation of fat from, (29) 459.	albohirta, notes. (32) 555. albohirta, remedies, (36) 658.
sour rot, description, (37) 843. tree, orange-like fruit. (40) 151.	frenchi affecting sugar cane, (38) 864.
tree, orange-like fruit, (40) 151. wither-tip, notes, (34) 241. yellow, effect on digestion, (26) 68.	frenchi affecting sugar cane, (38) 864. frenchi, control, (40) 648.
yellow, effect on digestion, (26) 68. Lemonade sirups, examination, (30) 258.	spp. in Queensland, (39) 255. stigma, notes, (35) 467.
Lemons—	Lepidium sativum seeds, germinability, (38)'729.
and oranges, hybrid between, (33) 441.	Lepidopria aberrans n.sp. description, (36) 556.
as source of citric acid and essential oils, (33) 540. asexual reproduction of seeds, (31) 533.	Lepidoptera— as affected by Roentgen rays, (27) 6.6.
bud selection. (40) 151.	catalogue, (28) 252, 253; (39) 557.
bud variation in, (36) 537; (37) 345.	Classification, (35) 464; (38) 160.
crown gall affecting, (28) 447. culture, (36) 538.	collecting and preserving, (35) 594; (39) 560. female, at light traps, (39) 560.
culture experiments, (28) 236; (40) 339.	habits. (35) 756.
culture experiments, (28) 236; (40) 339. culture in Messina, (35) 448.	habits, (35) 756. in and about Truro, Nova Scotia, (35) 853.
culture in Texas, (38) 40. curing, (26) 47.	intesting peach and apple, (40) 756.
decay in, (36) 546.	injurious to conifers, (39) 656. Japanese, life history, (37) 57.

Limekin—	(34) 130.
ashes, analyses, (28) 626; (32) 421; (34) 521. refuse, analyses, (38) 626.	fertilizing value, (27) 422; (29) 224; (30) 822; (31) 731; (33) 227; (34) 132, 725; (36) 122.
rotary, description, (37) 24.	for acid silt and clay soils, (37) 420.
Lime-magnesia— fertilizers, tests, (30) 519.	for acid soils, (33) 26, 220. notes, (34) 294, 796.
ratio—	use on soils, (37) 818. home grinding, (39) 120.
as affected by concentration, (28) 730.	home grinding, (39) 120.
effect on nitrogen transformation in soil, (32) 720.	Injurious to citrus fruits, (37) 656; (39) 458. inspection, (40) 622.
effect on plants, (26) 35; (27) 824; (29) 520;	loss from soils, (40) 423.
(30) 27. in grain culture, (30) 519.	magnesian and nonmagnesian, comparison, (32) 518.
in soil amendments, (34) 821.	magnesium v. calcium, (39) 127, 220, 622, 626;
in soil amendments, (34) 821, in soils, (26) 723; (28) 425, 812, 820; (29) 730; (31) 31, 218, 623; (32) 324; (36) 326, review of investigations, (32) 218.	(40) 125.
(31) 31, 218, 623; (32) 324; (36) 326.	marls and shells, analyses, (36) 821. media, growth of sorrel in, (40) 40.
Limes—	methods of analysis, #34) 609.
antiscorbutic value, (40) 565. as source of citric acid and essential oils, (33) 540.	mixing with superphosphate, (34) 26.
as source of citric acid and essential oils, (33) 540.	of Canterbury Province, New Zealand, (36)
black root disease of, (32) 646. budding on sour orange stock, (34) 438.	of New York, (34) 725.
budding on sour orange stock, (34) 438. collar rot of, (37) 838. crown gall affecting, (28) 447.	of Ohio, analyses, (39) 521.
ciown gaii anecting, (28) 447. culture, (36) 445.	OI Queensiand, analyses, (30) 421.
culture, (36) 445. culture in Island of Dominica, (31) 639. culture in West Indies, (29) 745; (33) 540.	of New York, (34) 725. of Ohio, analyses, (39) 521. of Queensland, analyses, (30) 421. resources of Michigan, (37) 428. resources of Missouri, (37) 428. resources of Pansylvania, (38) 22: (40) 818
culture in West Indies, (29) 745; (33) 540.	resources of Pennsylvania, (38) 22; (40) 816.

Limestone—Continued.	Liming—Continued.
tester, description, (34) 806; (36) 614. tests, (37) 428.	experiments, (26) 324; (27) 638, 833; (28) 624; (29) 25, 215; (32) 31, 132, 518, 624; (34) 132, 133, 725; (36) 26, 829; (37) 124; (38) 218; (39) 23, 116,
use with green manures, (39) 622.	725; (36) 26, 829; (37) 124; (38) 218; (39) 23, 116.
Lime-sulphur—	127, 425, 429, 517, 620, 626, 729, 737; (40) 134,
dips, field test for, (32) 612. injury, investigations, (30) 152.	321, 515, 724. experiments—see also special crops.
lead arsenate mixture, studies, (29) 802.	in Argentina, (31) 726.
mixture—	in Argentina, (31) 726. in Assem, (37) 427.
analyses, (26) 715; (27) 344, 441; (29) 42, 235; (31) 49, 142, (32) 169; (33) 47; (31) 436, 639;	on DeKalb soils, (38) 219; (39) 22. on Kentucky soils, (39) 121.
(36) 113: (37) 943: (38) 643: (30) 910	on moor soils, (39) 437; (40) 229,
as ovicide for codling moth, (28) 857. as summer spray, (26) 741; (29) 116; (33) 46.	with greenhouse roses, (30) 344.
causing apple drop, (40) 57.	with greenhouse roses, (30) 344. notes, (27) 24; (28) 223; (29) 623; (31) 125, 322; (33) 98; (34) 294; (38) 124, 520, 819; (39) 721.
causing apple drop, (40) 57. chemistry of, (26) 405; (31) 407; (36) 311. composition, (31) 439; (32) 410; (33) 613; (39)	paper on, (40) 595. Yorkshire soils, (40) 128.
508.	Limnaea truncatula, bionomics, (39) 290.
composition and evaluation, (35) 112.	Limnerium—
concentrate, preparation, (33) 154. dilution table for, (31) 636.	blackburni, notes, (31) 249. (Campoletis) prodeniae n.sp., description, (26)
dry, (39) 349.	352.
mixture, effect on— apples, (28) 47.	hawaiiense, parasitic on beet webworm, (26) 250. n.sp., parasitic on alfalfa caterpillar, (32) 58.
peaches, (29) 640.	spp., notes, (27) 262.
peaches, (29) 640. potatoes, (27) 151, 237; (28) 433.	validum, biology, (27) 359.
solubility of lead arsenate, (33) 710. transpiration of potatoes, (31) 825.	validum, notes, (27) 261. Limnobium spongia, culture for wild ducks, (33)
mixture-	251.
for potatoes, (33) 40. for San José scale, (39) 465.	Limnophora— septemnotata, hibernation, (34) 254.
from industrial wastes, (38) 757.	sp., notes, (27) 560.
from industrial wastes, (38) 757. fungicidal value, (27) 253; (28) 652, (31) 439, 749; (32) 158; (33) 648; (35) 39, 149, 151, 447; (37) 447; (39) 548, 652; (40) 251, 253.	Limoid, fertilizing value, (36) 122.
(37) 447; (39) 548, 652; (40) 251, 253.	Limonia warneckei fruit, analyses, (35) 80%. Limonius—
nome proparation, (20) 020.	californicus, remedies, (36) 758.
injurious effects, (31) 439.	californicus, studies, (30) 758.
injurious ingredients of, (29) 41. insecticidal value, (28) 755; (28) 658; (31)	discoideus, notes, (32) 651. Limothrips denticornis, notes, (28) 452.
409; (32) 846; (37) 53; (40) 162, 163.	Limquats, paper on, (29) 839.
manufacture, effect on eyesight, (30) 16, 618. methods of analysis, (29) 797; (33) 613; (34)	Lina scripta, notes, (27) 755; (30) 154. Linaceae—
806; (35) 207.	cyanophoric glucosids in, (35) 819.
microorganisms in, (31) 205. notes, (27) 757.	enzyms of, (28) 502, 503; (31) 610. Linamarin—
preparation, (26) 539; (28) 841; (40) 801.	as affected by enzymas, (28) 503.
preparation and use, (27) 39, 242; (28) 247, 639; (31) 541, 740; (32) 338; (33) 242; (37)	of Java beans, notes. (28) 502.
143, 544; (38) 844.	Linase, activity of, (28) 502, 503. Lincoln Institute, Missouri, notes, (30) 797.
properties, (28) 639.	Linden-
self-boiled, fungicidal value, (34) 146. sludge, analyses, (32) 520.	American, as a medicinal plant, (30) 145. borer, notes, (30) 655; (35) 54.
sludge, analyses, (32) 520. substitute for, (37) 251.	borer, notes, (30) 655; (35) 54. forcing experiments (28) 435.
tests, (27) 439, 440; (28) 48; (35) 549. use against apple scab, (28) 448; (31) 346.	leaf spot, notes, (35) 251. moth, snow white, notes, (26) 147.
against citrus insects, (31) 549.	seeds, germination, (33) 343.
against gooseberry mildew, (29) 249. against larch moth, (33) 859.	Lindera spp. oils of, (37) 109.
in seed treatment, (40) 346.	Lineshofts, laying out and putting up. (38) 893. Linguatula tomioides, treatment, (29) 676. Linguatulid, new, from Ecundor, (37) 357. Linguatulida from crocodiles, (37) 357.
in seed treatment, (40) 346. of flour paste in, (29) 459.	Linguatulid, new, from Ecuador, (37) 357.
with lead arsenate, (31) 108; (38) 258; (39) 251.	Linimentum camphorae, notes, (31) 676.
with nicotin, (40) 162.	Linkage—
with oil emulsions, (40) 453, 454. v. Bordeaux mixture for apple diseases,	in corn, (39) 331. intensities, calculation, (36) 729.
(26) 48.	Linnaemyia fulvicauda n. sp., description, (31) 456.
v. Bordeaux for potatoes, (35) 831.	Linoleic acid as tetrabromid in cottonseed oil, (32)
valuation, (33) 252. value and use, (39) 348.	313. Linospora sacchari, notes, (37) 553.
Limettin, notes, (30) 116.	Linseed—
Limewater— addition to milk, (36) 559.	cake acidity, (32) 259: (35) 770.
effect on seed germination, (26) 131.	adulteration, detection, (28) 873.
neutralizing cream with, (38) 281, Limex agrestis, notes, (29) 158.	aggiutinating properties, (31) 774.
Liming—see also Lime.	acidity, (32) 259; (35) 770. adulteration, detection, (28) 873. aggiutinating properties, (31) 774. analyses, (20) 165, 266, 267, 363, 809; (27) 469, 570, 670, 775, 872; (28) 464; (30) 169, 268, 467; (31) 168, 864; (36) 571. determination of purity, (26) 714.
Dacteriological effects, (26) 428; (27) 422.	467; (31) 168, 864; (36) 571.
cranberry soils, (40) 214. effect on—	determination of purity, (26) 714. effect on composition of milk fat. (20) 170.
bacteria in peat soils, (38) 420.	for steers. (29) 272.
barren soils, (31) 819. composition of turnips, (29) 418.	formation of hydrocyanic acid in, (28) 377, 378.
crop production, (28) 624.	nutritive value, (28) 673. palatability and nutritive value, (38) 66.
erop production, (28) 624, nitrification, (38) 119.	palatability and nutritive value, (38) 66.
nitrogen content of soil, (38) 213. nitrogen content of soy beans, (34) 632.	residual manurial value, (39) 530. meal-
yield of cotton, (29) 430.	acidity and rancidity. (36) 666.
effects in cylinder experiments, (40) 321,	ammonification in solls, (33) 808.

studies, (33) 157. sp., relation to leprosy, (31) 851.	life history and treatment, (35) 182; (37) 179. notes, (35) 878.
spp., hibernation, (38) 262.	of sheep and deer, relationship, (30) 284.

SUBJECT INDEX

Lungworms—Continued	Lupines-Continued.
studies, (34) 879.	yellow and blue, seed varieties of, (30) 38.
thread, in goats, (34) 274	yellow, fertilizing value, (26) 323.
tre itment, (35) 488.	Lupinosis in norses, (31) 583.
Luperisinus californicus, notes, (38) 157. Luperodes varicornis, notes, (34) 555.	Lupinus—
Luperos rufipes, notes, (31) 848.	albus, phosphatids in, (27) 203.
Lupino—	albus, tropisms of in alkali solutions, (31) 325.
anthracnose, notes, (28) 648.	angustifolius, analyses, (33) 466. haiwegii, culture in Hawaii, (32) 730.
chlorosis, treatment, (32) 842.	luteus, behavior on lime soils, (31) 425.
disease, new, (39) 53.	luteus, enzymatic splitting of arginin in, (39)
flakes, analyses, (28) 873.	733.
flakes, analyses and feeding value, (33) 170.	sericeus, description, (39) 386.
flakes for sheep, (29) 572.	spp, notes, (32) 778.
flakes, preparation and use, (36) 367. forage, effect on milk and butter, (34) 570.	Lupulin in hops, (33) 530.
radicles as affected by metallic salts, (32) 128.	Lupus viruses, investigations, (26) 884. Lutear cells and hen-feathering, (40) 665.
seed as affected by disinfectants, (26) 820.	Lattein in egg volk (26) 67 562: (27) 611
seed, composition, (33) 665.	Lutein in egg volk, (26) 67, 563; (27) 611. Luteins, constitution of, (30) 501.
seed, germination as affected by green manures, (33) 331.	Luyaluya, notes, (26) 362; (30) 230.
(33) 331.	Lycaena—
seed, germination tests, (29) 740.	bactica, notes, (27) 155.
seed phasin, agglutinating properties, (31) 774. shoots, etiolated, absorption of nitrogen by, (35)	spp., behavior of ants toward larvae, (27) 258.
435.	Lycenid, reared in Acacia galls by ants, (31) 352. Lychnis—
straw as a ground covering for fir, (30) 446.	dioica—
Lupines-	chemistry and anatomy of, (34) 522.
absorption—	chlorophyll factors in, (35) 227.
and excretion of electrolytes by, (32) 824.	hermaphroditism in, (30) 842.
and secretion of salts by, (34) 224. of salt mixtures by, (36) 128.	primary color factors, (27) 733,
on Sait Mixtures Dy, (30) 128.	inheritance in, (36) 331.
and mustard, continuous culture, (29) 431. as affected by—	inhibiting factors in breeding, (26) 827.
distilled water, (30) 825.	Lycium barbarum. localization of betain in, (27)
ether, (26) 127.	Lycoperdon spp., effect on vegetation, (38) 222.
lime, (35) 441.	Lycopersicin, formation in tomatoes, (32) 203.
manganese sulphate, (26) 226.	Lycopin—
smoke, (31) 521.	and its relation to chlorophyll, (32) 824.
as coffee substitutes, (40) 864.	development in tomatoes, (29) 132.
cover crop for orchards, (37) 833. green manure, (35) 629; (40) 229.	Lyctus—
poisonous plants. (36) 276.	beetles, remedies, (36) 758.
poisonous plants, (36) 270. sand binder, (29) 427.	planicollis, egg and manner of oviposition, (35)
assimilation of nitrogen by, (31) 523. bacteria as affected by acidity, (39) 722.	Lyda stellata—
bacteria as affected by acidity, (39) 722.	egg parasite of, (26) 557.
behavior of organic substances in, (39) 526.	notes, (30) 249.
behavior toward ammonium salts, (36) 632. blue, germination as affected by fertilizers, (29)	Lygaeonematus—
327.	erichsonii, see Nematus erichsonii. moestus, notes, (29) 861; (30) 53.
blue, toxicity, (39) 184.	Lygeum spartum, culture and use, (33) 131.
composition and digestibility, (27) 669.	Lygidea mendax—
culture experiments, (40) 238. culture in Rhodesia, (27) 32, 637. culture on moorland, (30) 229.	food plants of, (36) 356.
culture in Knodesia, (21) 52, 651.	notes, (26) 147; (28) 752; (30) 359, 852; (32) 550, 651; (33) 58, 252; (34) 158, 752; (35) 54; (36)
culture under dry farming, (30) 435.	856.
culture under dry farming, (30) 435. description, (32) 474.	oviposition, (34) 255.
	remedies, (35) 456; (39) 760.
drying, (27) 669.	scars on apples, (39) 257.
lertilizer experiments, (26) 428, 631; (27) 235;	studies, (34) 754.
(29) 031; (30) 229; (33) 531.	Lygum spartum, roots of, (26) 535.
drying, (27) 609. fertilizer experiments, (26) 428, 631; (27) 235; (29) 631; (30) 229; (33) 531. fertilizing value, (32) 216. fungus disease of, (26) 747. germination as a ffected by Roentgon rays (28)	Lygus—
germination as affected by Roentgen rays, (28)	communis—see also Apple bug, green. n.sp., description, (36) 550.
128.	novascotionsis n.var., description, (36) 550.
germination tests, (30) 837.	invitue matae (26) 550
growth as affected by—	invitus, oviposition, (34) 255.
fertilizer salts, (29) 329. phytin, (28) 128.	invitus, studies, (30) 358; (36) 457.
radioactivity, (28) 731.	U.Jorius, descriptions, (40) 353.
growth in distilled water, (34) 827.	invitus, oviposition, (34) 255. invitus, studies, (30) 358; (36) 457. n.forms, descriptions, (40) 353. pratensis, see Tarnished plant-bug, revision and biology, (38) 461. spinolno, notes, (38) 57. studies, (40) 353.
growth in heated soils, (26) 815.	spinolae, notes, (38) 57.
growth on volcanic ash, (40) 812.	studies, (40) 353.
hybridization experiments, (26) 834.	113 114 114 114 114 114 114 114 114 114
inoculation experiments, (30) 735; (31) 131, 524; (32) 433; (35) 322; (40) 822.	Lymexylonidae, structure and biology, (28) 858. Lymph and blood, amino nitrogen and glucose in,
irrigation experiments, (29) 631.	Lymph and blood, amino nitrogen and glucose in,
lime intolerance, (27) 722.	(39) 670.
liming experiments, (33) 133.	Lymph antibodies, origin, (35) 73, 279. Lymphadenitis—
nitrification, (28) 124.	caseous, in sheep, (35) 574.
nodule bacteria of, (32) 33.	in man, (33) 450.
relation of tops to roots, (31) 733. removing bitter flavor, (36) 635.	Lymphadenoma, transmission by bedbugs, (31) 550.
removing Ditter Havor, (30) 685.	Lymphangitis—
sensitiveness to calcium, (34) 724; (35) 430, stock poisoning by, (39) 184, 787.	epizootic, (39) 190, 283, 291, 389, 679, 789; (40) 85, 289, 586, 885.
stored, variations in weight of, (31) 235.	epizootio—
stored, variations in weight of, (31) 235. toxicity, (39) 184.	causative organism, (37) 377.
transformation of nitrogen by, (29) 133.	diagnosis, (38) 886,
utilization of phosphates by, (31) 733. varieties, (26) 631.	immunizatlon, (38) 785. in France, (37) 692.
white, root system, (32) 634.	in Hawaii, (39) 679.

	Machinery and place a great travel machinery
Lymphangids -Continued	Machinery—see also Agricultural machinery. for vine cultivation, tests, (26) 893.
epizootic—continued.	Macrobasis unicolor, see Blister beetles, ash-gray.

Western Hemisphere, (37) 565. equine, in Barbados, (37) 483. fever, metabolism in, (40) 868. handbook, (29) 759. in birds, studies, (39) 389. in cattle in relation to antirinderpest vaccinations, (39) 81. in Philippines, (33) 859. losses to rural industries from, (33) 749.	action of, (33) 773. curstive action in secretion of the nose, (30) 579. diagonostic value, (26) 177, 578, 676; (31) 879. effect on blood of horses, (20) 284. effect on diagnosis in glanders, (30) 686, 881. eye dropper, description, (32) 580. precipitant for, (26) 483. reaction on sound horses, (33) 479. test, intradernal, notes, (33) 479. test, intradernal, notes, (31) 177. test, notes, (27) 782; (28) 587. toleration in horses, (27) 883. use, (32) 180. Malleitization, historical survey, (39) 590. Mallophaga— affecting domestic animals in Australia, (29) 757. affecting fowls, (33) 353. distribution and species forming among, (29) 53. new, from North American birds, (38) 761. notes, (36) 552. of North American mammals, (36) 253. systematic nomenclature, (37) 461. Mallow— caterpillar, life history, (38) 562. Jews', culture in Egypt, (34) 232. rust, blology, (32) 54. rust, development, (30) 453. rust, hereditary transmission, (31) 646. wild, coloring matter, of, (34) 710. Malnutrition—see also Underfeeding, and disease, correlation, (32) 358. and toxicity in plants, discussion, (33) 725. effect on energy metabolism, (33) 664. tissue alteration in, (36) 763.
Malacons capitats in Der, tests, (31) 520. Malacosoma—see also Tent caterpillar. americana, see Apple tent caterpillar. disstris, see Forest tent caterpillar. erosa, notes, (32) 551. fragilis in California, (32) 152. neustria, egg paresite of. (26) 557. spp., notes, (27) 857; (29) 558; (32) 448. spp., remedies, (32) 347. Malargas— culture and analyses, (38) 340. culture experiments, (30) 229. culture in Cuba, (31) 41. Malarjasee also Anopheles and Mosquitoes. and mosquitoes in eastern North Carolina, (32) 61. bibliography, (33) 560. cause and prevention, (33) 656. control— by land drainage, (33) 486. in arkansas, (38) 862. California, (28) 560. Cuba and Panama, (39) 158. rice districts, (40) 857, 888. Western Hemisphere, (37) 565. equine, in Barbados, (37) 483. fever, metabolism in, (40) 868. handbook, (29) 759. in birds, studies, (39) 389. in cattle in relation to antirinderpest vaccinations, (39) 81. in Philippines, (33) 859.	action of, (33) 773. curative action in secretion of the nose, (30) 679. diagonostic value, (26) 177, 578, 676; (31) 879. effect on blood of horses, (20) 284. effect on diagnosis in glanders, (30) 686, 881. evo dropper, description, (32) 580. precipitant for, (26) 483. reaction, intrapalpebral, (38) 886. reaction on sound horses, (33) 479. test, notes, (27) 782; (28) 587. toleration in horses, (27) 883. use, (32) 180. Malleinization, historical survey, (39) 890. Mallophaga— affecting domestic animals in Australia, (29) 757. affecting fowls, (33) 383. distribution and species forming among, (29) 53. new, from North American birds, (38) 761. notes, (36) 552. of North American mammals, (36) 253. systematic nomenclature, (37) 461. Mallow— caterpillar, life history, (38) 662. Jews', culture in Egypt, (34) 232. rust, biology, (32) 54. rust, development, (30) 453. rust, hereditary transmission, (31) 646. wild, coloring matter, of, (34) 710. Malnurition—see also Underfeeding. and disease, correlation, (32) 385. and toxicity in plants, discussion, (33) 725. effect on enersy metabolism, (32) 664.

SUBJECT INDEX

Malophagus evinus in South Australia, (31) 853. Malt—	Maltose—Continued in acid hydrolyzed starch products, (28) 312.
and lase, action of bromid on, (37) 614. and lase, action on soluble starch, (37) 613.	in malt sprouts, (26) 24. resorption in small intestine, (29) 268.
amylase, studies, (40) 504. culms in ration, effect on bulk of manure, (40)	solutions, turbidity, (30) 808. Malukang butter, detection, (29) 613.
126.	Malvaceae, oils and fiber of, (36) 803.
diastase as affected by chlorids, (29) 528. diastase, saccharification, (31) 806.	Malvin, studies, (34) 710. Maniestra—
dust as feeding stuff, (30) 556. dust, ground, analyses, (33) 870.	biassicae, egg parasite of, (26) 557. picta, see Zebra caterpillar.
extract— amylases of, (31) 410.	tutolii, see Clover cutworm.
commercial products from, (32) 854.	Manuac— inheritance in Duroc Jersey swine, (29) 470.
effect on autolysis of coagulable proteins, (28) 504.	inheritance in pigs, (28) 570, 574.
effect on growth of rats, (34) 258. evamination, (31) 67.	Secretion as factor in onset of labor, (27) 1%
homemade, for nursing mothers, (29) 162. prevention of polyneuritis by, (31) 762.	chromosomes, fixation, (40) 662. hybrids, fertility of, (28) 667
germ, analyses, (26) 165, 363; (27) 570. grains, analyses, (24) 665.	tissue, growth in vitro, (33) 267.
grains, dried, analyses, (35) 562. methods of analysis, (32) 314.	Mammals—see also Animals and specific animals. artificial impregnation of, (29) 66.
phosphatases in, (34) 502.	blood parcsites of, (33) 152. British, history, (27) 51; (31) 248.
preparations, examination, (30) 669. root disease, new, description, (26) 647.	Canadian, 11 yp. nosomes of, (27) 81. coat pattern in, (32) 466.
saccharification by its own diastase, (29) 505. screenings, analyses, (33) 371.	color inheritance in, (37) 866; (38) 776.
soup extract in infant feeding, (36) 264.	correlation between number of mammae and size of litter, (31) 764.
sprouts— analyses, (26) 72, 165, 267, 665; (27) 68, 170,	domestic, suprarenal capsules of, (28) 778. fur-bearing, of North America, (29) 70.
(29) 270, 307, 471, 570, 666, 769; (30) 67, 68,	game, protection, (32) 447. germ-free, raising, (33) 310.
868; (31) 73, 168, 366, 467, 663, 766; (32) 169. 259, 568, 667; (33) 71, 371, 568, 870; (34) 72,	hair and hair coat system. (27) 369.
263, 371, 467, 665; (35) 562, 867; (36) 167, 268, 667; (37) 268, 471; (38) 67, 369, 665;	inheritance of color, (40) 869. inheritance of fertility, (40) 662.
(39) 167, 270, 370; (40) 665.	injurious to cacao, (27) 53. injurious to coconuts, (27) 857.
sprouts— spr	larger North American, (36) 354. macrophages of, (34) 382.
feeding value, (26) 72.	
methods of analysis, (20) 311. starch-forming enzym of, (33) 312.	male, necessory reproductive giands, (27) 303. male, production of feminine characteristics in, (28) 173. morphology and function of epithelium of uter-
tropon, effect on fat content of goat's milk, (31) 673.	ine coruna, (28) 875.
valuation, (34) 318. vinegar, standards, (27) 808.	natural diets and alimentary canal of, (28) 571. nematode parasites of, (36) 753.
Malta fever—	new, from Arizona and Colorado, (39) 654. new, of Mevico and Arizona, (34) 850.
cause, (27) 379. control in Malta, (26) 782.	new, of Mexico and Arizona, (34) 850. new, of North and Middle America, (37) 757. normal pulse rate of, (29) 66. of America, treatise, (38) 652. eastern Massachusetts, handbook, (33) 152.
diagnosis, (27) 379, 380; (30) 578, 781; (31) 878; (32) 276.	of America, treatise, (38) 652.
immunization, (26) 183; (39) 81. in Arizona, (27) 884; (30) 281.	Great Britain, (36) 852.
in goats, investigations, (29) 780. in Louisiana, (30) 281.	Great Britain, (36) 852. Great Britain, history, (35) 252, 656. Great Britain, treatise, (34) 57.
notes, (29) 285.	lower Colorado Valley, (34) 547.
organism, studios, (39) 289. prevalence in France, (26) 377.	North America, treatise, (37) 658. North Dakota, (32) 549. West Indies, list, (26) 652.
prevalence in the Gard, (26) 84. sero-diagnosis, (26) 782.	West Indies, list, (26) 652. western Europe, catalogue, (30) 850.
treatise, (36) 382. Maltase—	western Montana, relation to agriculture and
as affected by antiseptics, (28) 503. distribution and function in plants, (35) 413, 414.	spotted fever, (27) 52. purasites of, (26) 882.
formation and regulation by mold fungi, (31)	pattern developemni in, (32) 766. small, of North America, (39) 759.
730. in alfalfa, (32) 411. in cereals, (31) 204.	studies on number of pipples in. (38) 65.
in resting potato tubers, (35) 634.	ungulate, in British Museum, (30) 767. weight of heart, (28) 778. weight of lungs, (29) 476.
retention in blood serum of hungry and fed ani- mals, (30) 670.	wild, domestication and accumatization, (20)
Malted milk, microanalysis, (40) 509. Malting operations, barley substitute in, (40) 808.	668. wild, of Canada, (37) 757.
Malting power of barley, (39) 232. Maltose—	Mammary— botryomycosis in mares, (31) 184.
absorption in the intestines, (28) 763.	gland—
acetylated derivatives, optical rotatory powers, (36) 202.	enzyms in, (32) 411. extract, effect on milk production, (37) 173.
and glucose, comparison, (31) 762. determination, (28) 709; (34) 611.	lactase of, (30) 204. secretion as affected by animal extracts,
determination in plants, (35) 206. determination in presence of other sugars, (32)	(26) 370. secretion as factor of safety for the suckling,
112. effect on action of alcohol on plant cells, (34) 333.	(40) 661.
effect on ammonification, (28) 718.	secretion in, (27) 375. secretion physiology, (39) 678, 679. studies, (40) 467. synthetic capacity, (40) 72.
heat of combustion, (26) 160. hydrolysis by hydrochloric acid, (33) 803.	synthetic capacity, (40) 72.

Mammitis—	Mangarese-Continued
bovine, (35) (81, 682, (33) 84, 893	as plant food, (34) 30%.
hovine—	carbonate, fertilizing value, (28) 735; (33) 326; (34) 331.
immunization, (30) 581. leucocyte test for, (31) 200.	carbonate, oxidation by microles, (32 514
of human origin, (al) 182.	chlorid as treatment for night soil, (26) 425.
leucocyte test for, (31) 209. of human origin, (61) 582, therapeuties of, (29) 500, treatise, (39) 800	chlorid, effect on plant growth, (35) 131.
effect on enzym content of milk, (27) 287.	effect on growth of sugar heets, (31) 126.
effect on enzym content of milk, (27) 287. effect on milk, (32) 478.	effect on nitrification, (34) 623.
following foot and mouth disease, (33) 150. gangrenous, in sheep and goats, immunization,	fortilizing value, (27) 327.
gaingtonous, in succe and golds, indiamination,	solubility in soils, (37) 18. toxicity toward plants, (33) 327.
milk, detection, (28) 680; (39) 111.	concentration in surface soils, (31) 720.
milk, hemolytic action, (27) 782. necrotica, unusual complication of, (26) 284.	determination, (26) 109, 311; (38) 204.
notes, (31) 676.	determination in— drinking water, (31) 806.
streptococcie, prevention, (26) 683.	minerals and rocks, (31) 16.
studies, (40) 87. treatment, (32) 184, 479; (37) 277; (38) 286; (40)	plants, (29) 797.
778.	rocks, slags, etc., (30) 505. soils, (28) 111, 201; (31) 206.
tuberculous, in cows, (38) 183.	water, (26) 21.
Mamon as stock for cherimoga and atomoga, (32) 143.	dioxid, effect on germination of seeds, (29) 528.
Man—	dioxid, fertilizing value, (36) 220.
albinism in, monograph, (31) 467. animal parasites of, (36) 354.	effect on— Aspergillus spp., (27) 129, 228; (29) 30.
animal parasites of, (36) 354. as a machine, treatise, (31) 662.	formation of chlorophyll, (29) 323.
as affected by muscular work, (28) 168.	hemp, (33) 432. legume bacteria, (29) 733.
basal energy requirements, (35) 371. calorimetric observations on, (27) 307, (30)	metabolism of Aspergillus niger, (30) 630.
262; (32) 257; (33) 756.	nitrogen fixation by plants. (38) 122.
color inheritance in, (40) 870.	nitrogen fixation by plants, (38) 122. nodule bacteria of legumes, (33) 820; (34) 31.
dietary studies. (27) 666.	pineapples, (27) 842; (36) 538, 546. plant cells, (27) 826.
digestion experiments, (28) 564; (29) 865; (31) 65, 161; (34) 167, 659. double formations or composite monsters of,	plant growth, (27) 129; (28) 328; (30) 823,
double formations or composite monsters of,	plant growth, (27) 129; (28) 328; (30) 823, 824; (32) 129; (36) 520.
(97) 576	plants, (36) 432.
embryonic deformities in, (27) 274.	potatoes, (35) 634. seed germination, (20) 131.
food requirements, (28) 260.	seed germination, (20) 131. soils and plants, (40) 820. sugar beets, (34) 88. vegetation, (33) 80.
fungus parasites of, (32) 271.	sugar beets, (34) 38.
growth of the body, (40) 872.	fertilizers, notes, (31) 220.
embryonic deformities in, (27) 274. fasting experiments, (28) 260. food requirements, (28) 290. fungus parasites of, (32) 271. growth of the body, (40) 872. hog erystpolas affecting, (29) 780. idosyneracies toward dict, (27) 460. immunization, acquiret the propulses, (29) 881	fertilizers, notes, (31) 220. fertilizing action, (26) 727; (27) 628, 629. fertilizing value, (27) 128, 500; (28) 34, 125, 820;
imminimation against tablecatosis, (25) 104.	fertilizing Value, (27) 128, 500; (28) 34, 125, 820;
infection with avian tuberculosis, (26) 583.	(39) 749. in acid soils, (39) 627; (40) 728.
insects affecting, (27) 53, 453, 552; (28) 248, 554;	animal organs, (30) 562.
inheritance in, (28) 876; (29) 769. insects affecting, (27) 53, 453, 552; (28) 248, 554; (29) 252; (30) 53; (32) 448; (33) 746; (34) 651; (35) 853; (37) 560; (38) 459.	animals, (27) 500, 670. insect flowers and flower stems, (38) 206.
insects affecting, treatise, (33) 856; (37) 156, 760.	Kentucky soils, (31) 720.
lime requirements, (30) 367.	laxative drug plants, (38) 506. leaves, (29) 628.
malta fever affecting, (26) 84. measurement of surface area, (34) 68; (35) 369;	leaves, (29) 628.
	natural waters, (35) 424.
mechanical efficiency, (32) 258. Mendelian characters in, (28) 370, 531. metabolism during rest, (32) 165. metabolism experiments, (26) 161, 764, 865; (27) 366, 606; (28) 808; (29) 62, 164, 165; (31) 362, 465; (33) 754; (34) 68; (37) 266. parasitic amebae of, (26) 375.	leguminous plants, (37) 28. natural waters, (35) 424. pineapple soils, (29) 210. plants, (27) 830; (29) 28; (30) 30, 31; (38) 409.
Mendelian characters in, (28) 370, 531.	plants, (27) 830; (29) 28; (30) 30, 31; (38) 109.
metabolism experiments. (26) 161, 764, 865;	plants and animals, (31) 220. nw linseed oil, (23) 714. South Australia colle (31) 720
(27) 366, 666; (28) 868; (29) 62, 164, 165; (31)	
362, 465; (33) 754; (34) 68; (37) 266.	the blood, (30) 562, vogetable food products, (32) 628, woeds, (28) 432, wheat, (31) 339.
plague-like disease of brown squirrels affecting,	woeds, (26) 432.
(2.1) OFF	wheat, (31) 339.
(34) 365. power, measuring, (27) 666. puriu metabolism in, (29) 63; (33) 263. respiration experiments, (28) 509; (34) 260. sex determination in, (26) 773. skull measurements, (27) 69. stomach movements in, (28) 567. temperatura fluctuations in, (27) 768; (32) 564.	occurrence and rôle in plants, (37) 130.
respiration experiments, (28) 509: (34) 260.	oxid as fertilizer, (27) 726. oxid, effect on nitrogenous compounds, (27) 726.
sex determination in, (28) 773.	phosphate, fertilizing value, (31) 823.
skull measurements, (27) 69.	relation to enforosis, (33) 522.
temperature fluctuations in, (27) 768; (32) 564.	relation to protein formation in plants, (33) 725. removal from ground water, (27) 511
tick paralysis in, (30) 182.	rôle in growth of Aspergillus niger, (29) 210.
urine and other exerctions of, treatise, (20) 750 working power as affected by breakfast and	salts, effect on-
GIUGIII, (39) 00,	ammonification and nitrification, (36) 326;
Manatee-	(37) 126. catalase, (28) 504.
grass, analyses, (49) 862. use as food, (40) 862.	ferments, (26) 309. growth of sugar beets, (35) 217.
Mandarin—	growth of sugar beets, (35) 217.
black spot, notes, (31) 843.	nitric-nitrogen accumulation, (40) 722.
black spot, treatment, (32) 445. brown spot, notes, (34) 644.	solubility of phosphates, (37) 323. sugar beets, (31) 233. wheat, (31) 218.
brown spot, treatment, (37) 352; (38) 455.	wheat, (31) 218.
Mandelic nitrile, effect on plant growth, (37) 632.	salts, fertilizing value, (3J) 627, 824; (32) 725. salts, toxicity in soil, (36) 515.
Manganeso—	siag, iertilizing value, (38) 728,
agrogeologic studies, (27) 500; (28) 30, 626. and iron, antagonistic action on wheat, (36) 731.	soil concretions due to, (32) 215. solubility in soils, (28) 813.
as fertilizer, (28) 523.	solubility in soils, (28) 813. sulphate, action in wine fermentation, (33) 507.
as fertilizer for sugar beets, (27) 643; (35) 736.	ambresod mornit in 11th formandital (11) age a

fly, studies, (33) 562; (37) 566; (39) 155.	Menyanthes trifoliata, new glucosid from, (26) 24.
fungus disease, notes, (28) 244.	Menzicsia glabella, toxicity, (31) 376. Meracantha contracta, life history, (35) 261.
fungus disease, notes, (26) 244. industry in Valencia, (27) 39.	Meracantha contracta, life history, (35) 261.
pear, tests, (27) 741. Melons—	Meraporus crassicornis n.sp., description, (30) 661.
analyses and uso, (30) 363.	Mercurialis annua— analyses and feeding value, (33) 70.
breeding for disease resistance, (30) 331.	inheritance of sex-ratios in, (36) 522.
cassaba, culture experiments, (33) 43.	Mercurie chlorid—
culture in southern France, (36) 138.	and mercurophen as antiseptics, (39) 586.
culture under irrigation, (28) 839.	antiseptic value, (40) 182.
cassaba, culture experiments, (33) 43. culture in southern France, (36) 138. culture under irrigation, (28) 839. insects affecting, (27) 53, 453; (31) 248; (37) 760;	detection in wood, (26) 242.
(88) (88)	ellect on catalytic power of sous, (28) 118.
localization of acids and sugars in, (36) 110.	effect on complement and antibody produc-
Mendelism in, (32) 140.	tion, (40) 287.
Monketoon, as a cattle food, (29) 569. notes, (29) 338.	effect on germination of seeds, (26) 820. insectical value, (39) 762.
oil and press cake from seeds, (40) 803.	use in seed treatment, (39) 851.
parthenogenesis in, (29) 837.	Mercurophen-
sampling device for, (37) 711.	as germicide, (38) 481.
stock, culture, (34) 630.	toxicity, (39) 586.
stock, varieties, (30) 435.	Mercury—
varieties at Wisley, (33) 536.	as growth stimulant for hemp, (33) 432.
Melophagus ovinus, see Sheep tick.	chlorophenol as a fungicide, (33) 846.
Melospiza melodia, destruction of grain aphids by, (29) 453.	detection in urine, (39) 715. detection in water, (34) 410. determination, (40) 712.
Melusina (Simulium) dinellii, notes, (27) 560.	determination, (40) 712.
Membracidae-	oxid, effect on germination of seeds, (29) 528.
bird enemies, (39) 860.	preparations, fungicidal value, (37) 247.
of Cayuga Lake basin, (38) 462.	purification, apparatus for, (37) 503.
of Kansas, (31) 59.	suspended in gas, evaporation, (38) 210.
of Philippines, (36) 755.	toxic effect on plants, (38) 629.
parasitic castration in, (26) 148.	vapor lamp, photochemical effects from, (29) 218.

SUBJECT INDEX

Mercury—Continued.	Metabolism—Continued.
vapor light, effect on germination— and early growth of plants, (33) 826.	as affected by—continued. saccharin, (26) 257.
of seeds (30) 827.	sterilization of air, food, and surroundings,
Meria laricis, notes, (29) 156. Merisus—	(28) 569. sugar, (27) 871.
destructor, studies, (35) 466.	sulphur compounds, (26) 69.
subapterus, see Micromelus subapterus. Mermis sp., notes, (27) 456; (30) 362.	underfeeding and subsequent abundant feeding, (31) 464.
	undernutrition, (30) 365.
Merodon equestris— life history, (32) 350. notes, (27) 53, 356, 359, 457; (30) 56, 458, 757; (31) 757.	basal—
(31) 757.	and body surface, (33) 567. during growth period, (32) 697.
Meromyza americana—	factors affecting, (33) 264.
notes, (29) 252; (37) 160. parasites of, (31) 355.	of normal men and women, (33) 264. relation to creatinin elimination, (32) 359.
Merula migratoria, coccidiosis in, (26) 187.	cage for goats, description, (27) 71.
Merulius— as affected by fluorin, (32) 308.	cage for goats, description, (27) 71. cage for rats, (28) 272. cage for swine, (31) 269; (33) 380.
dry rot on wattle, (33) 545.	calcium and magnesium, (39) 5/5, 5/6,
lacrymans—	earbohydrate, see Carbohydrate metabolism. chemistry, (28) 201; (32) 399. chemistry of, treatise, (35) 765. creatin-creatmin, (39) 571, 873.
effect on greenheart, (34) 56. germination studies, (32) 150. growth as affected by tannic and gallic	chemistry of, treatise, (35) 765.
growth as affected by tannic and gallie	creatin-creatinin, (39) 571, 873.
	during experimental marches, (30) 169. during fasting, (32) 166.
injurious to telegraph poles, (33) 745. notes, (26) 551, 752; (31) 248, 547; (35) 252; (37) 253; (39) 553.	during fasting, (32) 166. during mental work, (27) 273; (29) 768; (31) 363. during pregnancy and loctation period, (31) 663.
(37) 253; (39) 553. pigment formation by, (28) 751.	endogenous, in pigs, (30) 268.
protection of timber from, (28) 246.	energy—
resistance of oak wood to, (32) 150.	and protein, relation, (32) 563. as affected by overfeeding, (28) 264.
treatment, (33) 151.	during muscular work, (32) 765.
resistance of oak wood to, (32) 150. studies, (29) 157, 852; (30) 850; (40) 350. treatment, (33) 151. sclerotiorum, description, (29) 554. spp., studies, (32) 845. studies, (32) 845. studies (34) 547.	of fowls, (33) 472. of hospital children, (33) 756.
spp., studies, (26) 751. studies. (32) 845.	experiments-
	analytical error in, (36) 164. at Carnegie Institution, (32) 565.
Mesembrianthemum— junceum, ash analyses, (36) 429.	at Carnegie Histoticity, (32) 303. automatic balance for, (33) 167.
mahoni roots as a yeast substitute, (29) 460.	comparison of methods, (35) 271.
rupicola, analyses and digestibility, (32) 167. Mesembryanthemum—	mineral, with swine, (30) 99. review of, (30) 364.
gas interchange, (40) 29.	under decreased partial pressure of oxygen,
rate and course of growth, (40) 30. Meshel grass, analyses, (28) 768.	(32) 860. with animals, (29) 62.
Mesidia gillettei n.sp., description, (31) 458.	ethletes and nonathletes, (33) 263.
Mesochorus—	calves, (26) 768. cattle, (28) 68; (32) 98. cows, (27) 775.
luteipes, notes, (30) 59. n.spp., descriptions, (26) 352.	cows, (27) 775.
nigrisignis, notes, (28) 160.	cows, technique, (39) 676.
plusiaephilus n.sp., description, (30) 256. sp., notes, (28) 558.	cows, technique, (39) 676. dogs, (26) 263, 468; (28) 67, 568, 866, 867, 868; (29) 165; (31) 464; (33) 754, 755, 869
Mesogramma polita, life history, (34) 358.	011CKS, (29) 171,
Mesoleius— tenthredinis, notes, (30) 362; (38) 62.	Eskimos, (31) 260. frogs, (30) 563.
transfuga, notes, (30) 362.	infants, (30) 562; (34) 68, 462.
Mesoleuca truncata, notes, (32) 556. Mesostenus pomonellae n.sp., description, (28) 162.	infants, (30) 562; (34) 68, 462. lambs, (33) 761. man, (26) 764, 865; (27) 386, 666; (28) 868; (29) 62, 164, 165; (31) 465; (34) 86; (35) 369, 866; (36) 763; (37) 266.
Mesquite-	868; (29) 62, 164, 165; (31) 465; (34)
aerial galls of, (30) 751. analyses, (28) 464.	HIRTES. (20) 200.
beans for pigs, (38) 675. blight, description, (30) 248. commercial possibilities, (37) 747.	won and mamon of rest (32) inc.
commercial possibilities, (37) 747.	pigs, (28) 469; (30) 570, 888; (31) 268; (32) 170; (33) 375, 465. sheep, (26) 164, 469; (27) 569; (28) 362.
curly, as a lorage crop, (31) 829.	sheep, (26) 164, 469; (27) 569; (28) 362. vegetarians and nonvegetarians, (33)
notes (28) 643	263.
seeding on ranges, (30) 35.	fats and carbohydrates in, (29) 269. following food ingestion, (40) 270, 868.
seeding on ranges, (30) 35. trunk diseases of, (31) 751. Mess management, military hospital, (40) 866. Messer barbarus, injurious to tobacco, (30) 759. Messer barbarus, injurious to description, (26) 182	gaseous—
Messer barbarus, injurious to tobacco, (30) 759.	as affected by food intake, (26) 160.
Mestocharis williamsoni n.sp., description, (26) 152.	as affected by humidity, (27) 869. as affected by muscular work, (29) 167.
Mestocharis williamsoni n.sp., description, (26) 152. Mesua ferrea, oil content, (31) 234. Metabolic water, production and rôle, (27) 201.	in cold-blooded animals, (30) 563.
Metabolism—	in gymnasts, (34) 261. in infants, (32) 461.
abnormal, in infants, (36) 865. abnormalities in, (32) 78.	in a case of leukemia during radium treatment
and energy of men, treatise, (32) 663.	(40) 566.
and nervous system, relationship, (28) 765. and vitality, digest of data, (31) 265.	animals as affected by temperature, (32) 765 Aspergillus niger, (30) 727.
se affected by-	Aspergillus niger, (30) 727.
air breathed, (32) 663. disease, (32) 563. food, (30) 365; (33) 753.	boys, (40) 868. chicory seedlings, (28) 821.
food, (30) 365; (33) 753.	chicory seedlings, (28) 831. guines pigs, (38) 672. infants, (27) 767; (33) 464; (39) 876. infants, mineral salts in, (29) 366. insects, (39) 761. malarial fever, (40) 868.
fruit juices, (28) 66, light, (29) 567.	infants, mineral salts in, (29) 366.
maintrition, (32) 664. meteorological conditions, (31) 362.	insects, (39) 761.
meteorological conditions, (31) 362. muscular work, (32) 67.	maiariai fever, (40) 863. men, women, and children, (39) 568.
reduced diet, (39) 567.	nitrogen hunger, (26) 764.

Station, report of director, (29) 793. New Jersey—	abnormalities in, (29) 321; (30) 826; (40) 226. abscission in, (39) 226. blossom color inheritance, (40) 442.
College, notes, (26) 300; (27) 99, 799; (28) 195;	breeding experiments, (27) 741.
College, notes, (26) 300; (27) 99, 799; (28) 195; (29) 498; (30) 397; (31) 398; (32) 600, 707; (33) 900; (34) 67, 295, 496, 708; (35) 668; (36) 569, 698, 797; (37) 98, 197, 498; (38) 97; (30) 599, 698, 707; (67) 207	breeding experiments, (27) 741. controlled pollination in, (40) 131. factors affecting flower size in, (34) 225.
695, 797; (37) 98, 197, 498; (38) 97; (39) 599, 697; (40) 297, 697.	fecundating stimuli and mutation in, (33) 533, hereditary reaction systems, (36) 521.

Nicotiana—Continued. hybridization experiments, (30) 329, 330. hybrids—	Nigredo— caryophyllina, internal uredinia of, (35) 635. fallens, aecial stage on red clover, (37) 752.
inheritance in, (28) 530; (37) 433. inheritance of flower size in, (29) 216. sterility in, (37) 225. studies, (29) 320.	Nile—flood of 1912, (33) 510. river delta, fertility map of, (31) 119.
inheritance in, (36) 629. inheritance of size in, (35) 819.	silt, (40) 620. water, iertilizing value, (25) 514. Nili maize, fertilizer experiments, (38) 233.
parthenogenesis— and parthenogarpy in. (33) 435.	Ninebark borer, notes, (28) 155. Ninhydrin reaction, relation to age and habits of
in, (30) 221. purthencarpy, and phenosphermy in, (34)	individuals, (33) 876. Nipa palm—
rustica, immunity to gummosīs, (28) 446. self-sterility in, (38) 823.	alcohol from, (29) 414. fiber, tests, (31) 526.
spp, hybridization experiments, (27) 428. spp, hybrids, studies, (27) 230.	sap, studies, (30) 16. Nippon river fever, see Tsutsugamushi. Nipponorthezia, new genus, description, (37) 358.
studies, (28) 530. tabacum, correlation and inheritance in, (27)	Nishiyana n.g. and n sp., description, (38) 857. Nisotra uniformis on cotton, (40) 256.
535. tabacum, cytokinesis of pollen mother cells, (40) 518.	Niter— cake, effect on barley, (40) 515. cake in superphosphate manufacture, (40) 221.
tabacum, inheritance of characters in, (30) 29. variation of flower size in, (33) 435.	soils, reclamation, (38) 323. spots in cultivated soils, (32) 29
viscosum, mosaic disease of, (36) 451.	spots in soils, origin, (33) 121; (34) 811. 812; (35) 724.
as by-product of tobacco culture, (32) 137. content of tobacco plants, (29) 503.	spots in western soils, origin, (36) 123. Nitocris— princeps, notes, (31) 61; (32) 547.
detection on sprayed plants, (38) 56. determination, (27) 14; (29) 810; (31) 613, 714. determination in—	usambleus, notes, (20) 253. Nitragin—
insecticides, (32) 296. presence of pyridin bases, (26) 316.	notes, (26) 723; (27) 322. tests, (26) 123, 322, 521; (27) 322; (28) 426; (29) 733.
tobucco, (26) 412; (28) 412; (37) 14. tobucco extracts, (26) 412, 413, 510, 511.	ρ-Nitranilin, insecticidal value, (34) 359. Nitrate—
distribution in tobacco plant, (26) 333. effect on larvae of eudemis moth, (26) 860. effect on plant growth, (37) 632.	content of— arable soils, fluctuation in, (30) 716.
emulsion for, (37) 760. extraction from tobacco, (29) 118.	dried soils (32) 817. soils as affected by fallowing, (20) 421. soils as affected by tallage methods, (40) 719.
extracts, preparation on the farm, (32) 158. in tobacco compounds, analyses, (26) 714. insecticidal value, (30) 737; (36) 152.	soils, relation to wheat yield, (40) 719. deposits—
oleate, preparation and insecticidal value, (39) 462.	descriptions and origin, (28) 522. in California, (28) 424.
oxalate, use on tobacco, (26) 638. paraffin emulsion, use, (39) 763.	Chile, (27) 519; (28) 522; (29) 517. Idaho and Cregon, (34) 220. United States, (27) 22; (28) 522.
preparations, analyses, (27) 441. preparations, combining with spray mixtures,	origin, (31) 724. diphosphate, fertilizing value, (31) 327.
(34) 158. solutions, aqueous, concentration and optical rotatory power, (37) 14.	exports from Chile, (30) 626. ferment, studies, (32) 523; (33) 726. industry in—
sprays, use with soap, (40) 752. sulphate—	Chile, (26) 425; (27) 21, 519, 723, 727; (31) 724; (33) 326; (37) 217.
as codding moth ovicide, (38) 860. insecticidal value, (37) 550, 660.	Germany, history, (28) 625. Norway, (29) 126.
sprays, tests, (40) 161, 162. sprays, wetting power and efficiency, (36) 455.	of ammonia, see Ammonium nitrate. lime, see Calcium nitrate. potash, see Potassium nitrate.
use with Bordeaux, (34) 61. variation in tobacco plant, (27) 830.	soda, see Sodium nitrate. phosphate, fertilizing value, (28) 520.
Nicotina, analyses, (20) 65. Nicotinic acid — in rice bran. (29) 263; (31) 714.	salts, industry in India, (37) 722. shales, analyses, (29) 318.
in rice polishings, (33) 167. Nidorella auriculata, analyses and digestibility,	supply in United States, (38) 817. Nitrates— absorption by corn and lupine seedlings, (35)
(27) 871; (32) 167. Nigella, floral anomalies in, (29) 629.	absorption by legumes, (36) 329.
Niger—cake, analyses, (30) 176. cake, digestibility, (28) 464.	accumulation as affected by green manuring, (33) 721.
cake, feeding value, (26) 267, 673; (30) 176. seed cake, analyses, (27) 670.	accumulation in soils, (38) 211; (39) 323. analyses, (34) 222. and nitrites, determination, (40) 309.
seed cake, effect on milk and butter, (34) 570. seed plant, culture for seed, (37) 230.	artificial, production and use, (29) 517. assimilation, (30) 824; (32) 223.
Night soil— analyses, (30) 26; (38) 23, 723.	assimilation by— mold fungi, (31) 223. plants, (27) 332; (28) 526; (30) 219.
fertilizing value, (26) 631; (27) 337; (35) 323; (38) 624; (39) 817. microorganisms, effect on soil productivity, (27)	soil microorganisms, (26) 517. Streptothrix, (27) 521.
722. preservation. (29) 731.	atmospheric, accumulation and utilization in soils, (30) 325.
freatment with manganese chlorid, (26) 425. Night temperature—	bacterial destruction of, (31) 819. behavior in cultivated soils, (27) 626; (28) 521, 723; (29) 515.
increase with height, (40) 314. relation to humidity, (40) 715. studies in Roswell fruit district, (40) 117.	723; (29) 315. circulation in soils, (28) 720; (30) 623. detection, (27) 8; (33) 804.
Night wells, formation, (30) 511.	detection in milk, (31) 508.

Nitrates-Continued.	Nitrie acid—
detection in very 200, (32) 115.	action on aluminum, (35) 802.
detection in water, (26) 311. determination, (26) 108, 204; (27) 111, 497; (33)	assimilation by plants, (30) 30, 31. destruction of stumps by, (28) 485; (31) 92.
determination, (26) 108, 204; (27) 111, 451, (66)	detection in presence of nitrous acid, (28) 19.
determination in—	detection in watered Hull Hices, (27) 111.
alkalı soils, (31) 206	determination, (27) 609; (32) 115 determination in foods, (29) 800
	determination in presence of nitrous acid, (31)
soils, (28) 610, (29) 610, 797; (31) 516; (34) 112, 811; (37) 111	503
water, (26) 110; (28) 19, 509; (37) 506.	effect on—
effect on—	action of maltase, (28) 501
apules, (29) 438.	bread fermentation, (27) 268
composition of sugar peets, (26) 196; (31) 435.	plants, (37) 224. in rain water, (31) 812; (33) 617
decomposition of sewage, (26) 725.	industry, status, (27) 128, 519. manufacture, (28) 424; (30) 427; (31) 822. manufacture, (28) 424; (30) 427; (30) 517; (20) 721
development of root tubercles, (35) 634. nitrogen-assimilating hieteria, (33) 724.	manufacture, (28) 424; (30) 427; (31) 822.
nodule production, (32) 727; (33) 134; (37)	maninacture from anunoma, (20) oir, (60) r21.
nodule production, (32) 727; (33) 134; (37) 133; (39) 335.	manufacture from the air, (21) 625, (26) 221,
0ar securings, (31) 231, 326.	physical and chemical data, (40) 607.
minuty of singar Deels, (28) 45.	production from synthetic ammonia, (38) 710.
extraction from soils, (26) 524. fertilizing value, (30) 320; (39) 726.	synthetic, manufacture and use, (35) 128.
flocculating power on clay, (27) 620.	synthetic, manufacture and use, (35) 128. toxicity, (28) 662.
formation—	use on aikali solis, (26) ol4.
from must nitrogen (20) 674	compounds, inorganic, behavior in sunlight,
in acid soils, (36) 22.	(30) 824.
formet coula (20) 624.	nitrogen
moor soils, (30) 325.	determination, (36) 504. in country rock, (22) 28; (36) 423; (37) 518.
in acid soils, (36) 22. cultivated soils, (26) 310. forest soils, (30) 624. moor soils, (30) 325. presence of carbohydrates, (34) 127. soild soils (31) 127	in country rock, (22) 28; (30) 423; (37) 518. in soil, influence of salts on, (40) 722.
puddled soils, (31) 127 soil in relation to weeds, (38) 814.	Nitrids industry, status, (27) 128, 519.
soil in relation to weeds, (35) 514.	Nitrification—
soils, (27) 721; (29) 818. soils after freezing, (30) 23.	and soil toxins, studies, (38) 322.
Virginia colle (30) 506.	as affected by—
in acid soil, studies, (40) 620.	alfalfa and timothy, (29) 317. alkali salts, (38) 322.
chernozem soils, (34) 618.	calcium carbonate, (40) 723
in acid soil, studies, (40) 620. chernozem soils, (34) 618. Colorado soils, (29) 819; (31) 619. orchard soils, (38) 724.	carbon, (27) 322.
rein and snow. (40) 19.	carbon, (27) 322. carbon dloxid gas, (39) 618.
rain and snow, (40) 19. soil, determination, (40) 506.	carbon disulphid and toluci, (30) 717; (40)
entle (28) 723! (27) 419.	513. copper salts, (29) 529.
solis as anected by soil moisture and manufe,	crops and fertilizers, (35) 321.
(36) 816. leaching from pervious soils, (37) 23.	ether, (27) 131.
leaching in soils in winter, (36) 119.	ground limestone, (27) 422.
localization in plants, (30) 30. loss from soil, (29) 315.	gypsum, (26) 527. humus-forming materials, (35) 216.
loss from soil, (29) 315.	irrigation and crop production, (31) 119.
loss from soil as affected by plant residues, (40)	lime-magnesia ratio, (32) 720.
loss from soil as affected by sugars, (40) 122.	liming. (26) 428.
loss in drainage water, (20) 421.	manganese, (34) 023; (37) 120.
manufacture, (28) 424.	manganose, (34) 623; (37) 126. metallic salts, (31) 120. organic substances, (31) 223.
	partial sterilization, (28) 121.
from peut, (31) 321. from the air, (27) 420; (28) 818; (33) 25. inefficiency in, (32) 322. movement in soils, (28) 813; (30) 118.	radioactivity, (30) 30. soil moisture, (28) 720; (36) 513; (40) 719.
inefficiency in, (32) 322.	Soil moisture, (28) 720; (30) 513; (40) 719.
movement in soils, (28) 813; (36) 118.	spray mixtures, (30) 423, 424. straw, (40) 719.
HILITO RETURNS TO THE ENTER OUT DECENSES IN	sulphur. (31) 125.
sunlight, (40) 425. origin and distribution in soils, (20) 621.	sulphur, (31) 125. effect on soil fertility, (35) 21; (37) 519.
production by Azotobacter, (31) 421.	effect on solubility of triculcium prosputate,
production in Chile, (32) 517.	(30) 23.
roduction	factors affecting, (36) 321. in acid humus soils, (30) 424.
hy bacteria, (31) 324. Streptothrix, (27) 621. yeasts and molds, (33) 726.	acid or nonbasic soils, (30) 517.
veasts and molds, (33) 726.	acid soils, (32) 121; (35) 514; (40) 620.
in cultivated soils, (40) 319.	arid soils, (29) 21, 211.
Nebraska soils, (29) 734. plant cells, (28) 428.	Colorado soils, (29) 621. cultivated soils, (31) 722.
sterilized soils, (31) 121.	Dunkirk Clay Loam, (26) 434.
of. (26) 507.	fallow soils, (28) 417; (31) 722.
without anacrobic conditions, (31) 127.	Hawaii soils, (32) 719.
relation to cultural practices and plant growth,	Indian alluvium as affected by potsherds, (40) 24.
(37) 813.	moor soils (40) 811
relation to sodium carbonate formation in soils, (28) 719.	natural soils, (40) 418. pasture soils, (30) 399; (31) 516. Philippine soils, (34) 718.
rôle in plant nutrition, (26) 625.	pasture soils, (30) 399; (31) 516.
rôle in plant nutrition, (26) 625. Schloesing, fertilizing value, (33) 25.	rilippine solis, (34) 718.
synthetic, manufacture by electricity, (30) 122.	plants, (34) 627. plants as affected by naphthalin, (33) 523.
titration with ferrous sulphate, (34) 203. transformation by soil microorganisms, (38) 723.	sandy loam soils, (36) 321.
use in Europe and Egypt. (27) 727.	semiarid soils, (36) 422.
use in United States, (27) 727. utilization by pea seedlings, (27) 730.	plants as affected by haphthatia, (35) 422. sandy loam soils, (36) 321. semiarid soils, (36) 422. soils, (26) 721, 722, 723, 816; (31) 318, 420, 818; (34) 127, 423, 619; (35) 626; (36) 724; (37) 318; (38) 211.
utilization by pea seedlings, (27) 730.	(37) 318: (38) 211
utilization by plants, (35) 28. Nitribacillus—	in soils—
oligotrophus, notes, (32) 523.	and solutions, (30) 218.
nolytrophus, notes, (32) 523.	nature, (36) 513.

Nitrification—Continued.	Nitrogen—Continued.
in soils—continued.	ammonia
statistical study, (39) 815. studies, (27) 517; (28) 814; (29) 21; (33) 421,	behavior in limed and unlimed soil, (26) 320. determination, (31) 109; (38) 311.
620. in solutions, (31) 420.	determination in urine, (34) 613. determination in water, (29) 617.
tilled and untilled fallow, (30) 216.	fixation by permutite and clay soils, (29)
Virginia soils, (29) 621. inhibition by alkali salts, (27) 124.	127, 517. utilization by corn plantlets, (27) 634.
of green manures, (28) 124; (33) 514.	utilization in protein metabolism, (29) 62.
of organic compounds in soils, (38) 119. of organic manures, (31) 723.	analysis, apparatus for, (40) 111. and carbon, equilibrium in soils, (38) 421.
rate of, (32) 123. relation to—	apparatus, all-glass, (40) 609, 806. as source of muscular energy, (26) 763.
crop production, (35) 424	assimilating bacteria, studies, (39) 722
cultural practices and plant growth, (37)	assimilation— as affected by humus, (31) 120.
soil fertility, (32) 96.	by Azolla, (29) 133. corn, (28) 225; (37) 223.
review of investigations, (30) 11. rôle of Streptothrix in, (27) 621.	1ungi, (29) 824.
seasonal variation, (32) 514. studies, (28) 217; (32) 320; (33) 124, 422; (39) 324.	legumes, (29) 326; (30) 435; (31) 523 living organisms, (30) 323.
Nitrifying organisms—	nold fungi, (28) 803. plant roots, (27) 634. plants, (26) 617; (27) 226; (32) 121. rice, (26) 41; (38) 340.
as affected by cyanamid and dicyanodiamid,	plants, (26) 617; (27) 226; (32) 121.
(40) 724. media for, (35) 226.	rice, (26) 41; (38) 340. royal palms, (27) 847.
studies, (39) 619. Nitrite-forming organism, new, studies, (35) 334	Streptothrix, (27) 620.
Nitrites—	from nitrates, ammonium salts, and aspara- gin, (27) 331.
accumulation in soils, (37) 19.	in meadows, (26) 422. plant cells, (28) 428.
assimilation, (32) 223. assimilation by mold fungi, (29) 29.	presence of nitrates, (31) 121.
assimilation by plants, (22) 526; (30) 219, 824. detection, (20) 108, 506; (33) 804. detection in drinking water, (32) 311.	atmospheric, abnormal fixation, (29) 819. atmospheric, assimilation by—
detection in drinking water, (32) 311.	alfalfa. (39) 738.
detection in drinking water, (32) 311. detection in sewage, (32) 115. detection in water, (26) 511. determination, (26) 311; (27) 111; (33) 204; (36) 203; (40) 309, 610.	mycorrhiza, (30) 826. plant hairs, (82) 327; (33) 30. plants, (31) 223; (35) 435.
determination, (26) 311; (27) 111; (33) 204; (36) 203; (40) 309, 610.	piants, (81) 223; (35) 435. soil organisms, (32) 29.
determination in—	yeasis and funct, (30) 629; (32) 728.
potable waters, (27) 503. presence of nitrous acid, (31) 503.	atmospheric, fixation, (28) 222, 522; (29) 517, 730; (39) 428.
sewage, (26) 407. soils, (29) 797.	atmospheric, fixation— as affected by plant tissues, (39) 26.
water, (28) 19.	by aluminum nitrid, (27) 325, 624,
effect on determination of oxygen in water, (31) 411.	Azotobacter, (29) 227. bacteria, (26) 123, 824.
formation in aqueous solution by sunlight, (40)	boron compounds (20) 829- (32) 125
425. from nitrates by sunlight, (38) 811.	electricity, (26) 425, 818; (27) 420; (31) 622, 822; (32) 125, 722; (33) 125, 219, 326, 517; (35) 219; (36) 122; (38) 122, 311, 325, 423, 625; (39) 817. feldspar, (29) 518.
in calcium eyanamid, (32) 217. in diseased plants, (37) 549.	326, 517; (35) 219; (36) 122; (38) 122, 311, 325, 423, 625; (39) 817.
in plants, (33) 627.	feldspar, (29) 518.

as affected by ultraviolet rays, (26) 430.	rotation system, (39) 639. soil acidity, (40) 134, 324.

Oats-Continued.	Oats-Continued.
as affected by—continued.	culture—continued. in New Mexico, (40) 18. North Carolina, (27) 531. North Dakota, (40) 736. Rhodesia, (27) 32, 637.
132.	North Carolina, (27) 531.
sulphur, (38) 221. uranium and lead, (28) 731.	North Dakota, (40) 736.
water level, (26) 620.	
weather conditions, (27) 641.	western Nebruska, (35) 438. Wyonung, (38) 527; (40) 630. on moor soils, (30) 229; (38) 132; (39) 437;
food for man, (27) 663. forage crop, (38) 827.	Wyoning, (38) 527; (40) 630.
green manure, (38) 27, (39) 423.	(40) 230, 322.
hay and silage crop, (39) 737.	on Wisconsin drift soil, (36) 623.
meadow cover crop, (40) 137. nurse crop, (31) 521; (40) 329.	relation to rainfall, (33) 715. under dry farming, (26) 828; (36) 528, 529;
pasture and haveron (28) 231.	(37) 329; (39) 131.
pasture crop, (39) 470, (39) 880. silage crop, (39) 134. sole ration for animals, (39) 72.	under in gation, (34) 528.
sole ration for animals, (39) 72.	decomposition in soil, (40) 214. depth of sowing tests, (27) 535
sole ration for guinea pigs and raddits, (35)	depths of plowing tests, (40) 624.
781. wheat flour substitute, (39) 871.	description and classification, (26) 41. descriptions, (31) 230
ash analyses, (29) 861.	dietary properties, (37) 261.
assimilation of— nitrogen by (26) 319	digestibility, (37) 678.
nitrogen by, (26) 319. phosphorites by, (27) 340. soil constituents by, (31) 632.	distance experiments, (30) 732. distribution of nitrogen in, (36) 269.
soil constituents by, (31) 632.	drawings of, (29) 141.
awning, studies, (39) 234	drilling v. broadcasting, (33) 33. dwarfness in, (40) 827.
biennial cropping, (32) 226; (38) 430.	dynamiting and subsoiling experiments, (32)
awn development in, (31) 332. awning, studies, (39) 234 biennial cropping, (32) 226; (38) 430. black, eradication, (27) 435. bleached with sulphur, notes, (27) 566. bleached with sulphur, notes, (27) 566.	528.
breaching with surpitur dioxid, (40) 33.	effect on— Azotobacter, (40) 618.
breeding, (26) 434; (40) 523.	carbon dioxid content of soil air. (39) 516.
breeding experiments, (26) 831; (27) 734; (29)	companion from of wheat, (32) 432. flavor of milk, (30) 573.
breeding and improvement in Sweden, (39) 833, breeding evperiments, (26) 831; (27) 734; (29) 138, 532; (33) 331; (35) 831; (36) 336, 834; (37) 738, 827; (39) 126, 234, 334; (40) 233, 524.	following crop, (40) 623.
bushel weights, (37) 889.	milk and butter, (31) 570.
calcium cyanamid for, (31) 524. catalytic fertilizers for, (30) 627.	nitrate content of soils, (29) 818, soil bacteria, (37) 421.
change in weight during storage, (30) 639.	soil moisture, (34) 17.
classification, (30) 528.	succeeding crops, (32) 224. electroculture experiments, (37) 336; (38) 525,
classification of varieties (27) 138. color and other characters, relations, (40) 239.	526: (39) 230: (40) 428.
common and bearded, origin and early habitat,	ergot affecting, (27) 149, factors affecting composition, (27) 139,
(40) 629.	fall-sown, in Maryland and vicinity, (36) 736.
competition in, (27) 430. composition as affected by—	feeding value, (34) 867.
companion crop, (26) 617.	feeding value, (34) 867. fertilizer experiments, (26) 31, 33, 324, 330, 331, 422, 424, 428, 522, 323, 527, 534, 535, 622, 623, 630, 632, 725, 817, 818, 835; (27) 82, 137, 321, 324, 337, 520, 530, 629, 627, 628, 638, 725, 726, 832, 837; (28) 124, 221, 222, 231, 431, 533, 623, 723, 724, 734, 735, 815, 816, 819, 820; (29) 23, 126, 127, 211, 213, 228, 318, 518, 621, 727, 728, 735, 821, 831; (30) 28, 125, 220, 229, 235, 326, 327, 335, 325, 336, 328, 822, (21) 31, 37, 123, 129, 217, 430, 528, 520, 821, (21) 31, 37, 123, 129, 217, 430, 528, 520, 821, 822, 528, 829; (32) 431; (33) 219, 320, 430, 632, 729, 831; (34) 22, 24, 128, 121, 244, 327, 330, 423, 517, 518, 622, 630, 723, 726, 820; (35) 31, 32, 212, 212, 21, 212, 212, 212, 21
companion crop, (26) 617. degree of maturity, (27) 340. fertilization and soil preparation, (34) 230.	630, 632, 725, 817, 818, 833; (27) 32, 137, 321, 324,
irrigation, (28) 332.	337, 520, 530, 626, 627, 628, 638, 725, 726, 832,
composition at different stages, (39) 836.	721, 734, 735, 815, 816, 819, 820; (29) 23, 126, 127,
correlation in, (31) 434; (32) 736, 737. cost of production, (29) 690; (32) 530, 594, 688; (33) 293, 831; (35) 691; (37) 191; (40) 292.	211, 213, 228, 318, 518, 621, 727, 728, 735, 821, 831;

cost of production in Great Plains area, (33) 232. critical period of growing season, (39) 811.	820, 821, 822, 828, 829; (32) 431; (33) 219, 326,
crushed, analyses, (27) 170; (28) 265; (31) 73,	430, 632, 729, 831; (34) 22, 21, 128, 131, 294, 327, 330, 493, 517, 518, 599, 630, 793, 798, 890, 785
366; (36) 765. crushed v. whole, for work horses, (36) 866.	30, 33, 126, 218, 220, 325, 326, 425, 426, 427, 428,
cultivated, origin, (27) 237; (30) 338, 527; (32)	518, 519, 520, 620; 736, 23, 134, 212, 217, 424, 629, 620; (37) 29, 30, 34, 134, 216, 229, 436, 636, 823; (38) 230, 517, 620, 726, 728, 820, 825, 820; (39) 22, 127, 137, 327, 331, 335, 127, 436, 436, 624, 639, 728, 729; (10) 135, 218, 229, 239, 734, 825.
1.51.	(38) 230, 517, 620, 726, 728, 820, 825, 829; (39)
culture, (27) 32, 139, 337; (29) 830; (30) 434; (31) 35, 265; (32) 132, 220, 598; (33) 731; (34) 138, 691; (30) 530; (38) 340, 636; (39) 834.	22, 127, 137, 327, 331, 335, 127, 435, 436, 624,
138, 691; (36) 530; (38) 340, 636; (39) 834.	fertilizing value, (31) 220.
continuous, (37) 137.	Fielitel Mountain, breeding, (30) 38.
experiments, (26) 38, 233, 329, 422, 737; (27)	floral anomalies in, (20) 629. for cows, (30) 176.
Continuous, (37) 137. experiments, (26) 38, 233, 329, 422, 737; (27) 232, 233, 336, 430, 530, 638; (28) 321, 633; (29) 36, 225, 425, 426, 427, 630, 632, 735, 831; (30) 33, 133, 527, 632; (31) 44;	for cut-over land pasture, (39) 231.
735, 831; (30) 33, 133, 527, 632; (31) 44;	for summer silage, (29) 173.
735, 831; (30) 33, 133, 527, 632; (31) 44; (32) 36, 132, 430, 431, 526, 528, 529, 530; (33) 31, 332, 633, 729, 830; (34) 137, 228, 631; (35) 228, 229; (36) 32, 33, 132, 436, 830; (37) 226, 322, 436, 529, 534, 731, 823; (38) 132, 234, 336, 631, 632, 634, 735, 825, 830; (30) 124, 125, 196, 197, 297, 335, 438	forcing by electricity, (26) 136, geotropism and phototropism in absence of oxy-
631; (35) 228, 229; (36) 32, 33, 132, 436,	gen, (39) 826.
830; (37) 226, 323, 436, 529, 534, 731, 823;	germinating power as affected by age, (27) 740. germination as affected by—
(38) 132, 234, 336, 631, 632, 634, 735, 825, 830; (39) 124, 125, 126, 127, 227, 335, 436, 437, 834, 835; (40) 228, 731, 735, 825.	depth of planting, (36) 437,
437, 834, 835; (40) 228, 731, 735, 825.	electrolytes, (35) 332. fertilizers, (29) 327.
for chicken feed, (38) 827. for hay, (37) 436.	lungicines, (29) 346.
for silage. (26) 574.	Orwood, (28) 536.
in Argentina, (35) 136. Chile, (39) 231.	stimulants, (26) 131.
cotton belt, (32) 533.	at different dates after threshing, (40) 443.
cotton belt, (32) 533. Indiana, (40) 735. Iowa, (39) 136.	energy of, (29) 538.
10wa, (39) 13%. Mexico, (32) 131.	in acid, base, and salt solutions, (30) 228. in mercury vapor light, (30) 827. tests, (20) 223, 740; (30) 837; (31) 136, 733; (37) 239.
Michigan, (39) 320.	tests, (29) 223, 740; (30) 837; (31) 136, 733;
Mississippi, (33) 431. Nebraska, (29) 534; (38) 740.	tests in hydrogen peroxid, (27) 201.

Oats—Continued.	Oats—Continued
germinative ability and vegetative force, (29) 740. germ-ripening experiments, (26) 131.	planting and harvesting dates, (26) 533. planting experiments, (27) 139. plat tests, technique, (40) 227, 623.
Gottinger, characteristics, (28) 738.	pollination, (36) 527.
grades, (32) 138. green, analyses, (27) 170; (29) 407.	potash fertilizers for, (26) 526. precipitin test for, (31) 733.
green in maining experiments, (32) 721; (10) 21, ground, analyses, (26) 72, 408, 665; (27) 570, 774; (28) 266, 66; (29) 666, 79; (30) 67; (31) 663, 863; (32) 259; (41) 467; (35) 371, (37) 767; (39) 369,	prices and shrinkage, (34) 337. primary, secondary, and double kernels for
(28) 265, 461; (29) 660, 7(9; (30) 67; (31) 663, 863; (32) 259; (31) 467; (35) 374; (37) 767; (38) 369.	seed, (40) 731.
000; (49) 241.	Argentina, (27) 193.
ground seaweed for, (10) 724. growing—	1911, (26) 595, 792.
in Colomis and, (39) 323 with corn, (40) 822.	Russia, (26) 294. Spain, (28) 736.
with legumes, (39) 815; (40, 822. with sov beans, (39, 741.	Argentina, (27) 193. Bohemia, (32) 827. 1911, (26) 595, 792. Russia, (26) 294. Spain, (28) 736. United Kingdom, (26) 793. protein content, following black fallow, (34)
without potash, (39) 334. growth as injected by—	radioactive fertilizer for (31) 129
alkali silts, (34) 125; (36) 118. electricity, (28) 827.	ratio of straw to grain, (32) 40; (36) 218. red roots of, (28) 442.
fertilizer salts, (29) 329. meteorology, (29) 510.	relation between size of sieu and yield, (20) 454.
meteorology, (29) 510. spacing, (31) 328.	relation of tops to roots, (31) 733. relative yielding capacity, (40) 625. residual manurial value, (33) 530.
growth — in heated soils, (26) 815; (27) 620.	residual manurial value, (39) 530. right- and left-handedness in, (30) 335.
in vertical illumination, (32) 129.	rock phosphate for, (29) 418. rod-row tests, technique, (38) 429.
on sterilized soils, (31) 336, on volcanic ash, (29) 726; (32) 36, studies, methods, (38) 526.	rolled—
hardiness, relation to sap density, (39) 430.	amino acid in, (33) 665. anaylses, (30) 68; (32) 667.
hay and silage from, (33) 632. heredity of albinism in, (31) 329.	as flour substitute, (37) 895. root pruning experiments, (33) 731.
hardiness, relation to sap density, (39) 430. bay and slique from, (33) 632. heredity of albinism in, (31) 329. history, (31) 131, 230. bull content, determination, (36) 231.	root system. (32) 634.
hulled, investigations, (29) 141. hulled, seed value, (36) 439. hull-less, analyses, (33) 759.	root system and yield, relationship, (30) 38, rotation experiments, (33) 429, 828, 829; (36) 829; (38) 129; (40) 229, 331, 431, 733, 829.
hull-less, analyses, (33) 759.	rust-resistant variety, description, (31) 332.
humin nitrogen content, (40) 510. husk percentage in, (37) 537. hybridization investigations, (26) 831.	rye stalk disease affecting, (26) 546. secondary rootlets, (40) 32.
hybridization investigations, (26) 831. hybridization v. selection in, (29) 635.	seed— bed preparation, (33) 232; (37) 29.
imports from Canada, (31) 95. improvement, (28) 431, 828; (29) 532, 535; (32)	cleaning, (40) 40. examination, (33) 734.
630. improvement in Canada, (37) 831.	home-grown v. linported. (40) 630.
inheritance in, (37) 332.	longsvity, (32) 634. selection, (31) 226. tests (30) 127
inheritance of— early and late ripening, (40) 528.	tests, (39) 137. treatment, (39) 238.
glume characters in, (36) 834. hull-lessness, (40) 438.	viability as affected by age, (31) 624.
tight and loose paleae, (40) 629. inoculation experiments, (35) 32.	depths, (40) 227. experiments, (26) 231, 331; (27) 335, 638, 639;
inosite phosphoric acids of, (39) 14. introduced and acclimated, (40) 429.	experiments, (26) 231, 331; (27) 335, 638, 639; (29) 36, 223, 224, 225, 425, 426, 429; (30) 338; (31) 328, 631; (32) 528, 630, 531; (33) 33, 431, 729; (35) 34, 335; (36) 33, 44, 134; (37) 30, 134, 220, 537, 635, 731; (38) 630, 740; (39) 137, 228, 336; (40) 228, 731.
irrigation. (31) 328.	431, 729; (35) 34, 335; (36) 33, 34, 134; (37)
irrigation experiments, (27) 531; (28) 130, 132, 134, 230, 827; (29) 32, 138, 226, 632; (30) 35; (31) 36; (32) 37, 225; (33) 286, 631, 731, 827, 884; (37)	(39) 137, 228, 336; (40) 228, 731.
640, 822.	tests under irrigation, (39) 133.
kernel-percentage determinations, (40) 35. large v. small seeds, (26) 636.	time, (40) 728. selection experiments, (35) 334, 826; (37) 32,
liming experiments, (29) 223; (32) 31, 132, 812; (34) 132, 133; (36) 27; (39) 221, 720; (40) 322.	selection experiments, (35) 334, 826; (37) 32, 226; (38) 740; (40) 233, 429, 528. selection of varieties, (28) 633.
lodging, (39) 430.	selection of varietics, (28) 633. selection within pure lines, (33) 38. shrinkage tests, (38) 840.
noiging, control, (30) 827. loose smut, description and treatment, (20) 341, maltase content, (31) 204, manurial value, (40) 127. manuring experiments, (40) 331, 431, 630. market grades, (27) 139. measurements, (30) 235. molasses sludge as a fertilizer for. (33) 818.	size and sprout value in relation to yield, (38)
manurial value, (40) 127.	soll moisture removal by, (40) 430.
manuring experiments, (40) 331, 431, 630. market grades, (27) 139.	spontaneous omission of color factors in, (28) 531.
measurements, (30) 235. molasses sludge as a fertilizer for, (33) 818.	spring v. fall sown (39) 836. sprouted—
nematode infection of, (36) 150. nematodes affecting, (28) 149; (29) 151; (30) 649;	amino acid in, (33) 665.
(32) 641, 750.	amino acid in, (33) 665. composition, (39) 74. for fowls, (29) 699; (30) 373; (36) 75. statistical notes, (40) 626.
new, moisture content, (34) 92. new strain, (40) 329.	stooling, (27) 735.
northern grown seed, (36) 634. notes, (26) 362.	statistical notes, (40) 026. stooling, (27) 735. subsoiling experiments, (31) 41, 131; (37) 732. sugar as fertilizer for, (27) 722. sulphur bleached germination tests, (27) 142. sulphur in, (31) 817. susceptibility to powdery mildews, (38) 645. Swiss types, (27) 338.
of Algeria, (34) 36. omission of color factor in, (29) 739. on inoculated soil, (39) 519.	sulphur bleached germination tests, (27) 142. sulphur in, (31) 817.
Dasturing, (3b) 827.	susceptibility to powdery mildews, (38) 645. Swiss types, (27) 338.
pasturing experiments, (33) 830. pedigreed, in Wisconsin, (37) 438; (40) 624.	Swiss types, (27) 338. threshing in variety tests, (36) 534. thrips affecting, (27) 452; (28) 452; (31) 351. transpiration, (34) 522; (39) 517. use in broad making, (40) 360, 863. utilization of different phosphates by. (31) 733.
peptic digestibility, (29) 164. phosphoric acid exchange in, (28) 818.	transpiration, (34) 522; (39) 517.
phosphoric scid exchange in, (28) 818.	use in press insking, (40) 300, 303.

Oats-Continued.	Oberea tripunctata—
v. bran for mulk production, (30) 576. v. corn for mules, (30) 772.	life history, (33) 861.
v. corn for pigs, (31) 868. v. corn for work horses, (37) 195.	notes, (28) 156. Obrussa sp., notes, (37) 564.
v. coin for work horses, (37) 195.	Ocean spindrift and blown spray, effect on chlorin content of inland waters, (31) 813.
v. spring wheat, (40) 443. valuation, (26) 267.	Ocean temperatures on California Cost, (28) 716.
value in the diet (29) 660.	Oceanic circulation and temperatures, (34) 615.
variations in, (31) 832; (32) 736, 737 varieties, (26) 39, 232, 233, 331, 629, 632, 733, 828,	Oceanodroma leucorhoa subspp., notes (38) 556.
835; (27) 32, 137, 138, 234, 334, 337, 530, 531, 532,	Oceanographical research, new instruments for,
637, 638, 735, 736, 834; (28) 431, 532, 531, 636, 735,	(37) 513, 807.
827; (29) 31, 36, 137, 138, 222, 225, 223, 425, 428, 530, 735, 736, 738, 831; (30) 33, 131, 135, 229, 235,	Ocellaria vanillae, description, (27) 450. Ochoco irrigation p. oject, (35) 385.
434, 435, 527, 829; (31) 226, 430, 434, 435, 527,	Othre as priming for paint, (33) 90.

effect on germination of seeds. (23) 536.	summary and digest of data, (36) 161.
fungicidal value, (28) 544,	Osteomyelitis in cattle and horses, (27) 4"8,
Oryctes— monoceros, notes, (37) 54.	Osteoporosis in horses, (36) 780. Ostertagia—
nasicornis, investigations, (38) 163.	bullosa, notes, (29) 555.
rhinocoros-see also Coconnit beetle.	circumcincta, notes, (40) 83.

Ostertagia—Continued.	Oven-
spp., notes, (28) 481. trifurcata in abomasum of sheep, (35) 78.	electrical, description, (29) 567. temperatures for cooking, standardization, (31)
Ostitis, infectious, in cattle and horses, (27) 478.	359.
Ostrich—	Overfeeding, effect on energy metabolism, (28) 264.
chick fever, (33) 384. chicks, diseases and parasites of, (26) 487.	Oviducal glands, albumin secreted by, (37) 773. Oviduct—
farming in Australia, (29) 575.	effects of ligation, section, or removal, (32) 670;
feather industry in South Africa, (35) 774. feathers, analyses, (26) 469.	(33) 96. of domestic fowls, secretory activity, (26) 196.
wireworm, life history, (33) 384.	of hen, abnormality, (33) 471.
Ostriches—	of hen, histology, (28) 575.
breeding and care, (34) 873. breeding and feeding. (27) 876.	physiology, (26) 670. Ovis tragelaphus, relation to sheep pox, (28) 183.
breeding and feeding, (27) 876. breeding for plumes, (26) 473. breeding in Germany, (32) 173. breeding, treatise, (26) 772.	Ovochromin, notes, (28) 607. Ovomucoid of birds' eggs, investigations, (28) 65.
breeding in Germany, (32) 173.	Ovomucoid of birds' eggs, investigations, (28) 65.
feather development in, (30) 874. feather irregularities, (28) 270, 271.	Ovoserums, use, (30) 112. Ovularia palmicola n.sp., description, (31) 746.
feather irregularities, (28) 270, 271.	Ovulation—
feathers of, (27) 472. from Sudan, (27) 674. laying records and weight of eggs, (39) 781.	and ovarian cyst formation, (40) 467. as affected by corpus luteum, (33) 96.
laying records and weight of eggs, (39) 781.	as affected by corpus luteum, (33) 96. in fowls as affected by corpus luteum, (32) 671.
leucocytozoon affecting, (28) 683; (29) 476. notes, (29) 172.	in swine, (40) 663. period in rats and mice, (40) 663.
quilling experiments, (27) 472.	Ovules, abortiveness in relation to pod position,
raising in Morocco, (38) 174.	(34) 134.
studies, (35) 569. treatise, (30) 472, 874.	Owl, burrowing, destruction of locusts by, (28) 351. Owl, little, economic importance, (29) 651.
Osyris—	Owls, notes, (27) 355.
abyssinica, analyses and digestibility, (32) 167. alba, description, (27) 547.	Owls of France, treatise, (26) 452. Ox—
Otacariasis in mountain sheep, description, (33)	hemoglobin, hydrolysis, (26) 22; (28) 607.
680.	muscle, autolysis in, (36) 109.
Otiocerus coquebertii, notes, (26) 147. Otiorhynchus—	muscle, lysin content, (31) 559. saliva, diastase in, (36) 82; (37) 276.
(Cryphiphorus) ligustici, studies, (33) 657.	serum, coagulation by ultraviolet light, (30)
ovatus—	110. serum proteins, refractive indexes, (28) 501.
life history and remedies, (30) 58. notes, (28) 156; (32) 448, 556; (37) 54.	small diluvial primitive, (26) 768.
notes, (28) 156; (32) 448, 556; (37) 54. remedles, (38) 864.	warble fly-see also Hypoderma spp. and Bots.
studies, (36) 156. rotundatus, habits of, (29) 657.	control, (32) 153, 680. control in Denmark, (26) 485.
sensitivus (planatus), life history and bionomics,	control in Germany, (32) 581. genitalia and larva of, (31) 254.
(26) 861.	genitalia and larva of, (31) 254. in Netherlands, (38) 563.
spp., colored plate, (40) 170. spp., notes, (28) 456.	in South Africa, (31) 780.
spp., parthenogenesis in, (32) 250.	in United States, (35) 76.
sulcatus, notes, (30) 654; (32) 156, 556; (34) 65; (36) 859.	larvae extract, effect on cattle, (36) 478. larvae extract, effect on cattle and sheep,
sulcatus, studies, (39) 363.	(37) 379.
tauricus, notes, (33) 652. Otobius (Ornithodoros) megnini, notes, (28) 357.	larvae, migration, (39) 157.
Otocoris alpestris actia, destruction of locusts by,	larvae, penetration from alimentary tract, (26) 657.
(28) 351.	life history, (27) 457; (32) 60, 153, 680; (33) 656; (37) 691.
Otthia— amica, notes, (33) 545.	ood, (37) 691. mature larva in back of horse, (33) 554. notes, (26) 286, 781; (27) 356; (28) 81, 181; (29) 357, 761; (30) 83, 254, 552; (31) 98; (32) 448, 753, 796; (33) 554, 878; (36) 456; (37) 156, 464; (40) 259. relation to weather conditions, (26) 657.
sp. on sugar cune, (37) 553. Otus asio, notes, (27) 355.	notes, (26) 286, 781; (27) 356; (28) 81, 181;
Otus asio, notes, (27) 355.	(29) 357, 761; (30) 83, 254, 552; (31) 98; (32)
Ougeinia dalhergioides, notes, (29) 443. Outdoor work, treatise, (26) 298.	156, 464; (40) 259.
Ova	relation to weather conditions, (26) 657.
intrauterine absorption, (40) 663, mainmalian, segmentation, (27) 770.	review of literature, (29) 856. studies, (27) 289; (31) 85; (35) 282; (36) 482. warble juice, offect of injection, (39) 585.
mammalian, segmentation, (27) 770. parasitic, viability, (26) 588.	warble juice, effect of injection, (39) 585.
production of sperm isongglutinins by, (29) 167. white and yellow yolk of, studies, (26) 164.	Oxalates, toxic action, (40) 465. Oxalic acid—
Ovalbumin, preparation and refractive index, (39)	assimilation by plants, (31) 426.
609.	detection in wine, (37) 207. determination in pine needles, (28) 713.
Ovarian— extract feeding, effect on growth and sexual	determination in Sesame cake, (28) 713.
extract feeding, effect on growth and sexual development, (34) 766.	effect on-
infection in fowls, studies, (31) 484. transplantation experiments, (28) 173.	bacterial flora of soils, (28) 815. bread fermentation, (27) 268.
transplantation in chicks, (34) 870.	carbon assimilation by plants, (27) 525.
transplantation in ducks, (40) 367.	isolation from soils, (28) 418.
transplantation in guinea pigs, (30) 472. transplantation, notes, (26) 163.	larvicidal value, (34) 359. production from wood, (28) 50.
Ovaries—	salts, toxicity, (27) 229. secretion by Cicer arietinum, (34) 525.
as affected by Roentgen rays, (32) 466.	secretion by Cicer arietinum, (34) 525. solutions, keeping qualities, (38) 412.
development in fowls, (29) 874. isolated, effect on growth, (40) 662.	Oxalic compounds, effect on vegetation, (29) 49.
 of pigs, enzyms of, (27) 670. 	Oxalis-
Ovariotomy, effect on sheep, (27) 70. Ovariotomy in fowls, (40) 871.	esculenta as affected by copper fungicides, (28) 247.
Ovaritis in cattle, (38) 179, 787.	genetical studies, (34) 823.
Ovary—	spp. on corn in Barbados, (33) 445.
extract, effect on milk production, (37) 173. of the fowl, corpus luteum, (40) 664.	violacea, notes, (31) 235. Oxamid—
resting, in hen, effect of pituitary extract on,	assimilation by plants, (26) 32.
(33) 472.	availability of nitrogen in, (35) 427

abnormal digits, (27) 369.	determination in—
cost of raising, (2) 467.	sewage, (26) 407.
degeneration in teeth of, (33) 279.	water, (31) 411; (35) 415.
digestion experiments, (28) 463. European wild, old pictures of, (28) 365.	water and effluents, (34) 410. water in presence of nitrite, (33) 413.
feeding experiments, (26) 468, (32) 166, 363, 770.	disappearance in canned food containers, (28)
from Roman military station, skulls of, (28) 165.	361.
limb tendons of, (29) 570 maintenance ration, (33) 870	dissolved, determination in water, (32) 612; (33) 711.
pasturing experiments, (31) 470.	dissolved, in rainwater, (37) 620.
reproductive organs, (27) 369.	dissolved, in water, factors affecting, (26) 418.
serum proteins of, (28) 876.	effect on—
sinus hairs, (27) 373. skin temperature and fattening capacity, rela-	alcoholic fermentation in peas, (26) 731. denitrification, (27) 424.
tion, (31) 866.	germination of aged seeds, (36) 29. elimination as affected by light, (28) 801.
v. horses for field work in Russia, (26) 269.	elimination as affected by light, (28) 801.
working, dipping, (33) 384. Oxhydridase, antitoxic rôle, (40) 580.	pressure effect on seed germination, (26) 131, 531. relation to ammonia formation in plants, (28)
Oxidase—	328.
action, mechanism, (35) 713; (36) 609; (37) 726. activity in etherized bulbs and tubers, (30) 728. activity in plants, (37) 9, 326, 429, 430. apparatus, description, (32) 508.	relation to growth of algae, (28) 821. requirements of roots of higher plants, (38) 628.
activity in cinerized builds and tubers, (30) 725.	rôle in germination of Gramineno. (38) 24.
apparatus, description, (32) 508.	rôle in germination of Gramineue, (38) 24. rôle in germination of seed, (80) 629. storage by bacteria and fungi, (28) 329. Oxygenase, activity in diseased potatocs, (26) 548.
content of plant juries, measurement, (27) 9. content of sugar boets, (28) 314. effect on anthocyanin, (38) 128. enzyms, notes, (34) 711. of fruits, notes, (26) 310. of Rhus diversilobe, (37) 411. rection for distaction of raped fats, (40) 412.	storage by bacteria and fungi, (28) 329.
effect on anthogyanin (38) 128	p-Oxyphenylethylamin in normal cheese, (32) 503.
enzyms, notes, (34) 711.	Oxypleurites n.spp., descriptions, (30) 362.
of fruits, notes, (26) 310.	Oxypicurites n.spp., descriptions, (30) 362. Oxyproteic acids, chemistry of, (33) 409. Oxyptilus periscelldactylus, see Grape plume moth.
reaction for detection of rancid fats, (40) 412.	Oxyrhachys tarundus, notes, (31) 59.
reactions, studies, (36) 503.	Oxyspirura mansoni, treatment, (29) 784.
reagents, color changes in, (36) 221.	Oxysternus maximus, notes. (29) 858.
relation to catalase in plant tissue, (36) 610. Oxidases—	Oxythrips, synopsis, (36) 550. Oxythyrea cinctella, notes, (27) 453.
detection, (23) 204.	Oxytropis—
distribution and rôle in plants. (27) 632.	lamberti, occurrence of barium in, (26) 432.
distribution in plants, (31) 626; (31) 32; (35) 130.	spp., descriptions, (39) 386. Oxyurlas, variation in, (33) 459.
corn silks, (30) 709.	Oxyuriasis, equine, treatment, (40) 586.
in chicken fat, (28) 63, corn silks, (30) 709. potatoes, (31) 748.	Oxyuris vermicularis—
tobacco plant, (31) 204. of acid tissues, (31) 826.	dissemination by files, (30) 659. physiological investigations, (31) 679.
Cytisus adami, (27) 733.	relation to appendicitis, (26) 678.
resting and sprouted potatoes, (20) 547.	Oxygrosis in the horse, (39) 686.
sugar cane, (40) 426. plant, nature and function, (30) 203.	Oyster— beds, inspection in New Jersey, (28) 862.
plant, review of literature, (33) 426.	culture, studies, (39) 782.
role in— deterioration of cut flowers (28) 129	floating laboratory, description, (27) 774. grounds, inspection in United States, (26) 761.
deterioration of cut flowers, (28) 129. formation of essential oils, (28) 129.	industry, sanitary regulations, (27) 269.
formation of pigments, (29) 219. plant respiration, (34) 523, 524; (36) 329.	larvae, collecting, (20) 473.
sugar heet curly top, (29) 48, 550.	laws in Washington, (27) 254. mud, analyses, (32) 421.
studies, (27) 503; (33) 409; (36) 224.	propagation, (40) 177.
Oxidation—	shell scale— as affected by low temperature, (34) 357.
as affected by food ingestion, (40) 361, 365, 766. by catalysts. (33) 329.	control, (39) 162.
by entalysis, (33) 320. effect on soil phosphorus, (27) 122. in animul body, (28) 607; (34) 663. potential, meusurement, (36) 224.	life history and remedies, (29) 558.
n animal body, (28) 607; (31) 663.	mite enemies, (27) 861. notes, (27) 658; (28) 156, 353, 752; (29) 251; (31) 60; (34) 158; (35) 253, 256, 756.
Oxidizers, enect on arminonia production and use in	(31) 60; (34) 158; (35) 253, 256, 756.
killed plants, (28) 327. Oxido-reduction, biochemical phenomena, (38) 802.	notes and remedies, (29) 758.
Oxids, metallic, iertilizing value, (31) 821.	parasites of, (26) 149. remedies, (33) 59; (36) 857. studies, (33) 558.
Oxidus	studies, (33) 558.
gracilis, studies, (37) 667. new genus, description, (26) 353.	shells— analyses, (36) 821.
Oxydenzoic acid, heronic termentation, (au) 28.	analyses and use, (28) 726.
Oxycarenus—	
hyalinipennis, notes, (32) 847; (40) 256, 854. laetus, notes, (28) 654. spp., injurious to cotton, (27) 454.	fertilizing value, (39) 626. ground, analyses, (28) 626; (31) 421; (33) 820. ground, diffusion in soils, (29) 128.
spp., injurious to cotton, (27) 454.	ground, diffusion in soils, (29) 128.
Oxycholesterol, color reaction for, (36) 112. Oxyechus vociferus—	ground, mixing with acid phosphate, (30)
destruction of locusts by, (28) 351.	325. Oysters—
Hotes, (27) 355.	analyses, (28) 459.
Oxygen— absorption by oils, (29) 613.	bacterial content, seasonal variation, (26) 761. bacterial purification, (27) 63.
absorption by respiratory chromogens of plants,	bacteriological analyses, (38) 265.
(29) 324.	bacteriological examination, (37) 468.
absorption by sewage effluents, (20) 400. analysis, apparatus for, (40) 111.	Canadian, development, (26) 473.
and carbon dioxid, effect on nitrogen trans-	Canadian, development, (26) 473. canned, industry in United States, (31) 67. creatin and creatinin content, (31) 760.
formation in soils, (36) 724.	culture, (27) 472, 774. culture in Germany, (30) 271.
atmospheric, effect on plant proteins, (27) 428. concentration, relation to methylene blue reduc-	destruction by crabs. (36) 271.
tion by milk, (40) 613.	destruction by crabs, (36) 853. examination, (26) 868; (28) 196; (31) 64; (32) 854; (35) 287, 859; (36) 159. floating, (27) 762; (30) 375.
density, (34) 414.	(95) 987 850- (96) 150
determination, (31) 109.	flooting (27) 789: (20) 275

SUBJECT INDEX

Oysters—Continued.	Paint-Continued.
floating or swelling, (36) 861.	testing, (33) 90.
green color of, (35) 265.	testing, (33) 90. use on the farm, (26) 386.
green, copper content, (36) 861. handling and marketing, (31) 63.	Paints-
handling and marketing, (31) 63.	analyses, (28) 715; (29) 866.
packing, shipping, and sale, (34) 761. polluted, purification, (35) 763. propagation, (28) 774; (30) 374; (32) 573; (34) 180;	branding, tests, (34) 668. dry, inserticidal value, (29) 758.
polluted, purification, (35) 763.	dry, insecticidal value, (29) 758.
propagation, (28) 774; (30) 374; (32) 573; (34) 180;	examination, (28) 565. for highway bridges, tests, (36) 587.
(36) 371.	for highway bildges, tests, (36) 587.
recipes, (29) 361.	for roofs, (35) 189. for steel bridges, (36) 384.
relation to typhoid fever, (31) 460; (35) 162.	ior steel bridges, (36) 384.
removal from polluted to unpolluted waters,	inspection in Iowa, (36) 762.
(26) 67. sewage-polluted, danger from, (27) 866.	inspection in Wisconsin, (35) 471. sheep branding, tests, (27) 874.
shell, determination of sanitary quality, (30)	tests and analyses, (30) 691.
163.	use of soy bean oil in, (28) 114.
shucked, cold-storage changes, (37) 311.	Palaeochenoides mioceanus, relationships, (38) 556.
sold in Baltimore, bacterial content. (31) 759.	Palaeococcus fuscipennis, notes, (30) 249.
solidity of, (36) 861.	Palaeopus n.spp., descriptions, (39) 565. Palate of civilized man, relation to agriculture, (40)
studies, (40) 459.	Palate of civilized man, relation to agriculture, (40)
transmission of diseases by, (30) 368.	656.
water content, (32) 252.	Paleacrita vernata, see Cankerworm, spring.
Ozamia lucidalis, notes, (28) 451. Ozone—	Paleobotany, bibliography, (29) 626. Palindia, notes, (34) 855.
absorption bands in spectra of sun and stars,	Palm—
(38) 511	bud rot, notes, (30) 845; (38) 547.
determination in atmosphere, (39) 210.	
effect on beech wood, (30) 711.	cabbages of Madagascar, (27) 766.
formation in upper atmosphere. (33) 19.	cabbages of Madagascar, (27) 766. cake, analyses, (26) 266; (27) 570; (29) 367. disease in Belgian Kongo, (35) 550. diseases in India, (33) 846. diseases, notes, (27) 747; (28) 241; (39) 52, 147, 752;
nascent, as food preservative, (29) 566.	disease in Belgian Kongo, (35) 550.
purification of water by, (32) 87.	diseases in India, (33) 846.
nascent, as food preservative, (29) 566. purification of water by, (32) 87. therapeutic value, (38) 585.	diseases, notes, (27) 747; (28) 241; (39) 52, 147, 752;
use in stermization of mark, (21) 75.	(40) 48, 845. fruits and seed from Brazil in Missouri Botanical
water purifiers, description, (30) 789.	Garden, (31) 742.
Ozonium omnivorum, notes, (30) 538; (31) 746; (38) 334.	
Pachnacus litus, notes, (28) 855. Pachnacus opalus, notes, (31) 751. Pachyprachys, North American, revision, (34) 261. Pachypruchus verticalis n.sp., description, (32) 658. Pachycris torridus. notes, (30) 657 pt.	Kernel—
Pachnaeus opalus, notes, (25) 555.	cake, analyses, (31) 467, 864; (34) 263. cake, digostibility, (36) 764. cake for cattle, (34) 566; (38) 167. meal, analyses, (31) 864; (38) 771. meal, feeding value, (38) 167, 771; (39) 576.
Pachybrachys, North American, revision, (34) 361.	cake for cattle. (34) 566: (38) 167.
Pachybruchus verticalis n.sp., description, (32) 658.	meal, analyses, (31) 864; (38) 771.
Pachycoris torridus, notes, (30) 657.	meal, feeding value, (38) 167, 771; (39) 576
Pachycoris torridus, notes, (30) 657. Pachycrepoideus dubius, notes, (40) 459.	
Pachyna neus, notes, (30) 454.	meal for steers, (37) 789. oil and coconut oil, differentiation, (38) 413 oil, detection, (28) 208; (29) 613. oil, physical constants, (35) 312.
Pachymerus—	oil and coconut oil, differentiation, (38) 413
chinensis, remedies, (31) 553. chinensis, studies, (28) 256.	oil, detection, (28) 208; (29) 613.
gonagra in Hawaiian Islands, (40) 266.	oll, physical constants, (35) 312.

Paratetranychus citri, sec Citrus red spider. Paratettix, breeding experiments, (40) 367.	poison, toxicity, (29) 111. root knot, notes, (39) 52.
Parathyroid-	seed, production, (33) 226.
gland, effect on nitrogenous metabolism in sheep, (32) 562. gland of domestic animals, (29) 377.	soft rot, notes, (31) 641. webworm, see Depressaria heracliana.
gland of domestic animals, (29) 377.	Parsnips—
tetany in eats and dogs, (27) 787. Paratimia conicola n.g. and n.sp., description, (34)	culture experiments, (35) 341. fertilizer experiments, (26) 819; (30) 435.
254. Paratoxin, use against tuberculosis, (27) 682.	food value, (36) 863. mulching v. clean culture, (33) 534.
Paratrioza cockerelli—	winter storage, (38) 442.
noids, (35) 658. remedies, (40) 162.	Parthenium argentatum— constituents of. (27) 244.
remedics, (40) 162. studies, (37) 849. Paratuberculosis in bovines, notes, (28) 181.	culture experiments, (29) 443.
Paratyphoid—	rubber and resin content as affected by rainfall, (30) 744.
B bacillus detection in meat, (26) 480. B bacillus in healthy calves, (26) 381.	studies, (39) 216. Parthenocarpy—
B, studies, (40) 83. bacilli—	and seed formation in bananas, (31) 535.
equine, agglutination test, (40) 289. from hog-cholera cases, (40) 480.	In fruits, (34) 226. in Nicotiana, (34) 136.
from hog-cholera cases, (40) 480. relation to abortion in mares, (33) 183.	notes, (36) 331. Parthenogenesis—
vaccination with, (40) 289.	among fruit blossoms, (26) 540.
bacteria as causative agents of disease in birds, (40) 685.	heredity in, (32) 448. in higher plants, (38) 331.
bacteria in swine, (40) 783. diagnosis, (31) 878.	in higher plants, (38) 331. Nicotiana, (30) 224; (34) 136. plants, (30) 329; (34) 727.
enteritidis group, differentiation, (30) 188, 587.	tomatoes, (34) 233. various plants, (29) 837.
enteritidis group, studies, (40) 478, 780. fevers, evolution of, (39) 285.	various plants, (29) 837. relation to sex, (38) 261.
infection— detection (20) 881	rudimentary, in pheasants, (31) 765. Partridge—
in man and animals, relationship, (30) 181. notes, (28) 164.	berry, notes, (33) 143.
	peas as cover crop for orchards, (37) 833. Partridges—
investigations, (27) 378. Para-urazin assimilation by plants, (26) 32.	European or gray, propagation, (28) 752. handbook, (27) 774.
Parcel nosi	Hungarian, feeding habits, (30) 454.
for shipping eggs, (31) 370; (32) 572; (38) 72.	Hungarlan, in Missouri, (27) 550. Parturient apoplexy, paralysis or paresis, see Milli
business methods, (38) 805. for shipping eggs, (31) 370; (32, 572; (38) 72. marketing apples by, (36) 712. marketing by (31) 789; (34) 392, 690, 792; (36) 91. marketing experiments, (30) 593. Parchasting experiments, (30) 593.	fover.
marketing experiments, (30) 593.	Parturition, physiology of, (26) 277. Paspalum—
Parchment paper, examination, (30) 179. Pardianlomella ibseni, notes, (36) 155.	delmint hosporium n.sp. on (39) 218.
Parenchyma wood, formation after winter injury, (36) 431.	notes, (30) 220. dilatatum—
Parepyris sylvanidis n.sp., description, (31) 355. Paresis, parturient, see Milk fever.	as forage crop. (37) 132.
Parexorista—	as pasture grass, (30) 435; (35) 562; (40) 327. culture experiments, (28) 136; (35) 829; (37)
caridel n.sp., description, (40) 855.	730: (38) 827.
lucorum, parasitic on gipsy moth, (31) 652. Parhelia 90° from sun, (38) 210.	culture in Guam, (32) 731. culture in Porto Rico, (29) 631. culture in Rhodesia, (27) 32.
Parhelic circle at Fargo, N. Dak., (37) 115. Paria canellus, see Strawberry root worm.	culture in Rhodesia, (27) 32.
Paris green— analyses, (26) 65, 324, 715; (27) 441; (28) 493, 626;	fertilizer experiments, (27) 32. in New Zealand, (40) 239. poisoning cattle, (39) 801.
(30) 697; (31) 49, 142; (32) 169; (33) 47; (34) 436, 639; (37) 243; (39) 240.	root disease of, (29) 152.
639; (37) 243; (39) 240. combined arsenious oxid in, (26) 658.	root disease of, (29) 152. root system. (36) 438. varieties. (27) 32.
effect on sugar cane roots, (38) 238.	varietics, (27) 32. marginatum, notes, (30) 229.
insecticidal value, (32) 158. methods of analysis, (32) 296; (36) 715.	poisoning in cattle, (34) 676.
preparation, (40) 801.	scrobiculatum, analyses, (30) 565. spp., analyses, (31) 431, 863.
preparation and properties, (28) 308. scald of tobacco plants by, (34) 351.	SDD., culture experiments, (27) 234.
use, (32) 632. use on tobacco, (26) 638.	SDD., culture in Hawaii, (32) 729.
Park system for Chattanooga, (26) 338. Parkinsonia—	spp., of Java, (30) 525; (35) 440. spp., notes, (26) 362. stoloniferum, distribution of stomata in, (32)
africana, analyses and bibliography, (32) 187.	221,
microphylla, transpiration in, (34) 728.	varieties, (30) 434.

SUBJECT INDEX

Passalora heven n.sp., notes, (30) 453; (34) 442; (38)	Pastures—Continued.
356.	carrying-capacity tests, (39) 879.
Passer domesticus—	composition of herbage, (37) 230. coyote-proof, for sheep, (26) 73.
destruction of locusts by, (28) 351. feeding habits, (28) 450.	culture experiments. (30) 133.
Passerculus sandwichensis savanna, destruction of	dry land, notes, (30) 435.
grain aphids by, (29, 452.	
Passerherbulus and its allies, (38) 556.	fertilizer experiments, (26) 40, 533, 534, 629; (27) 234, 638, 834; (29) 517, 632, 728; (30) 73, 83; (31) 470, 821, 829; (32) 368; (38) 227, 527, (36) 31; (36) 425, 735, 740, 829; (38) 432; (39) 22,
Passeriformes, new pycnonotine family, (38) 856. Passeromyia heterochaeta, notes, (36) 359.	(31) 470, 821, 829; (32) 368; (33) 227, 527; (35)
Passiflora—	31; (36) 425, 735, 740, 829; (38) 432; (39) 22,
caerulea, formation of mechanical tissue in, (27)	
631.	for cows, (37) 271; (40) 575. irrigated lands, (32) 628.
edulis as trap for fruit flies, (29) 657. laurifolia, cold storage of, (32) 439.	pigs, (31) 470.
teratological variations in, (32) 35.	pigs in the South, (39) 479. the cotton belt, (32) 534.
Passion—	the cotton belt, (32) 534.
fruit brown spot, notes, (34) 644.	work horses, (39) 479. importance in dairying, (32) 870. improvement, (26) 533; (37) 230.
fruit weevil, notes, (26) 657. vine beetle, notes, (40) 654.	improvement, (26) 533; (37) 230.
Pasta Callaro, tests, (28) 245.	in Manitoda and Saskatchewan, (36) 437.
Paste and pastry, methods of analysis, (32) 505.	National Forests, (35) 167. New England, (33) 526.
Pastes, Italian, analyses, (28) 450. Pasteurella—	southeastern England, nutritive value and
equine, relation to equine influenza, (26) 587.	fertility, (32) 121.
studies, (31) 381.	southeastern Unio, (36) 34.
Pasteurellosis— in reindeer, studies, (31) 381.	Wyoming, (39) 135. insects affecting, (37) 847.
in sheep, (29) 17)	irrigated—
Doctouriestion-see also Crosm. Milk. etc.	clipping experiments, (38) 30.
colon test of efficiency, (32) 775.	establishing, (38) 130; (39) 834, grasses for, (36) 132; (38) 337; (39) 434; (40)
colon test of efficiency, (32) 775. effect on mold spores, (35) 276. effect on streptococt, (31) 574. for butter making, (27) 179. of ere um, studies, (33) 473. milk, (28) 275, 282, 283; (27) 178, 281.	432.
for butter making, (27) 179.	management, (35) 734; (37) 640.
of cre im, studies, (33) 473.	notes, (40) 374. tests, (38) 175.
milk, (26) 275, 282, 283; (27) 178, 281.	3701110 (36) 173
milk and cream, (31) 188. milk, efficiency, (27) 178.	lowland moor, management, (37) 333.
resistance of factic acid dacteria to, (33) 673.	lowland moor, management, (37) 333. management, (31) 37; (33) 527. management in Kansas, (39) 439; (40) 330.
résumé, (31) 674. Pasteurizer, home, construction, (31) 771.	management in Kansas, (39) 439; (40) 330.
Pasteurizer, nome, construction, (31) 771.	management in Sweden, (39) 633. moorland, treatise, (31) 830.
Pastry— and hygiene, paper on, (32) 760.	of central France, improvement, (30) 733.
and hygiene, paper on, (32) 760. as source of infection, (20) 552.	of German East Africa, (28) 364.
detection of milk in, (40) 512.	on peat soils, (38) 134. peaty, fortilizer experiments, (37) 134.
Pasture— crops—	permanent, (38) 796.
for cut-over lands, (39) 230.	permanent, (38) 796. permanent, formation, (37) 826.
for growing pigs and broad sows, (30) 100.	phosphates for, (31) 174. planting and care, (30) 829.
handbook, (29) 530. trials, (39) 130, 434.	preparation and care. (30) 230.
utilization, (39) 880.	preparation and care, (30) 230. seeding, (31) 830; (33) 33.
experiments, (40) 32.	sneep-carrying capacity, (30) 770.
Ses—	stump-land, tests, (38) 176. top dressing, (27) 599.
analyses, (33) 227. composition as affected by fertilizers, (27)	watering devices for, (33) 188.
125.	Pasturing experiments on irrigated fields, (40) 371.
culture in New York, (39) 532.	Pataleta, notes, (30) 783. Patellina—
for Texas (37) 827.	fragarine n.sp., description, (36) 452.
fall sowing, (33) 98. for Texas, (37) 827. in Guam, (40) 327.	sp. on strawberries, (33) 744.
mixtures for, (31) 37; (32) 566; (33) 430. mixtures for New Zealand conditions, (39)	Patent medicines—

as affected by	field
disinfectants, (26) 820 ether, (26) 127.	depth of sowing tests, (27) 835.
niter cake superphosphate, (40) 515.	feeding value, (40) 771.
pod position, (34) 134.	effect of position in pod, (40) 521. feeding value, (40) 771. fertilizer experiments, (40) 735. forage production, (39) 838.
poisons, (39) 224. as green manure, (26) 534.	forage production, (39) 838.
green manure under dry-land conditions,	grazing off, (39) 229. growing with grain, (40) 822.
(39) 131.	neredity of violet color in (31) 333.
hay and silage crop, (39) 737. hog pasture, (39) 375.	hogging-off, (37) 66, 68. irrigation experiments, (37) 640.
orchard cover crop, (34) 437.	liming experiments, (39) 221; (40) 126.
assimilation of nitrogen by, (26) 32. assimilation of organic phosphates by, (29) 423.	notes, (35) 340. pedigreed, in Wisconsin, (40) 624.
bacteria as affected by acidity, (39) 722.	rate of seeding test, (34) 734.
bacterial stem plight of, (35) 847.	relation between size of seed and yield, (26) 434.
betains in, (27) 203. breeding, (28) 435.	seeding experiments, (37) 30; (39) 333; (40)
breeding and improvement in Sweden, (39) 833. breeding experiments, (28) 331; (29) 433; (33) 331.	227.
bushel weights, (37) 889.	selection experiments, (37) 32. tests in Montserrat, (40) 228.
Canada—	tests in Montserrat, (40) 228, utilization of sugar by, (36) 125. varieties, (27, 32, 334, 736; (28) 532, 827; (29) 32, 426; (32) 37, 730, 731; (33) 34; (34) 228, 735; (35) 829; (36) 36; (37) 20, 30, 32, 33, 135, 228, 337 530, 640; (38) 131, 431, 634. varieties for moor soil, (39) 438. variety tests, (39) 128, 227, 229, 333, 334, 435, 738, 838; (40) 730, 731, 732, 735. water requirements, (29) 826; (32) 127. yields, (27) 734; (39) 336; (40) 731. forcing by electricity, (26) 138. gametic reduplication in, (30) 433. garden—
and outs for forage, (33) 225.	varieties, (27) 32, 334, 736; (28) 532, 827; (29) 32, 426; (32) 37, 730, 731, (33) 34, (34) 298
and oats, for silage, (28) 734. culture, (27) 32.	735; (35) 829; (36) 36; (37) 29, 30, 32, 33, 135,
field, culture, (31) 265.	228, 337 530, 640; (38) 131, 431, 634.
field, culture experiments, (28) 735. field, fertilizer experiments, (30) 820.	variety tests, (39) 128, 227, 229, 333, 334, 435,
field, varieties, (33) 830.	738, 838; (40) 730, 731, 732, 735.
canned, analyses, (31) 461.	yields. (27) 734: (39) 336: (40) 731.
canned, ash content, (33) 260. cannery refuse, feeding value, (36) 167.	forcing by electricity, (26) 136.
canning, (39) 165.	gametic reduplication in, (30) 433.
canning, improvement in Wisconsin, (34) 341. composition as affected by companion crop, (26)	and field, origin, (32) 327.
617.	new bacterial disease of, (29) 245.
cost of production, (29) 690. culture, (26) 539: (34) 630.	nodule bacteria of, (32) 33. protein utilization, (26) 564.
culture—	selection experiments, (38) 635.
experiments, (27) 31, 335; (28) 633; (30) 133; (32) 529, 530; (33) 830; (35) 141, 341; (36)	variations in, (30) 739. varieties, (30) 640; (31) 336; (34) 833.
32; (37) 30, 529, 825; (38) 132, 133; (39) 334.	variety tests, (33) 430. germinating, starch digestion in, (28) 127.
32; (37) 30, 529, 825; (38) 132, 133; (39) 334. in Antigua, (36) 735.	germinating, starch digestion in, (28) 127. germination as affected by—
Philippines, (39) 444. Rhodesia, (27) 32, 637.	depth of planting, (36) 437. fertilizers, (29) 327.
Washington, (37) 98.	mineral matter, (39) 526.
on moor soils, (39) 438. under dry farming, (30) 435; (36) 528, 529.	germination—
under irrigation, (34) 528.	in mercury vapor light, (30) 827.
description and agricultural value, (36) 635.	of, (35) 431. tests, (29) 223; (30) 236.
device for sorting, (36) 635. dietary properties, (40) 762.	tests in hydrogen peroxid, (27) 201.
dried, arsenie in, (27) 269	grass, culture experiments, (27) 735. grass, varieties, (27) 32.
drying, (37) 509. effect on companion crop of barley, (32) 515.	grass, varieties, (27) 32. green, analyses, (27) 170.
offerd on coil maietares (21) 17	green, as meat substitute, (35) 166. ground, analyses, (35) 562.
fertilizer experiments, (26) 527, 622, 681, 818,	ground, analyses, (35) 562. ground, digostibility, (28) 461.
835; (27) 32, 628; (28) 734, 816; (29) 22; (30) 220;	growth as affected by— alkali salts. (34) 125.
electroculture experiments, (30) 788; (40) 428. fertilizer experiments, (26) 527, (22, 681, 818, 835; (27) 32, (28); (28) 734, 816; (29) 22; (30) 220; (31) 328, 820; (32) 630; (31) 24, 518, 822; (35) 426; (38) 820.	alkali sults, (34) 125. fertilizer salts, (20) 329. glycerin, (31) 522. radioactivity, (22) 731. stimulants, (35) 434. graph in relyible to forward up (35) 432
fertilizing value, (32) 216.	glycerin, (31) 522.
field-	stimulants, (35) 434.
and outs, seeding experiments, (31) 36. as cover crop, (32) 332.	growth in relation to temperature, (35) 432. harvesting and storage, (38) 41.
forage crop, (34) 140; (38) 827.	home drying, (38) 41.
green manure, (28) 339; (32) 539; (35) 438; (39) 31.	hybridization experiments, (29) 433; (30) 329
hog pusture, (38) 470; (39) 479; (10) 75. silage crop, (39) 134.	330; (5.2) 326. improvement, (28) 331.
silage crop, (39) 134.	improvement, (28) 331. improvement in Canada, (27) 831.
winter green manure, (39) 434. Bacillus radicicola of, (33) 329.	and variation in, (38) 822.
chemical study of varieties, (39) 838.	correlation, and variation in, (28) 331.
composition at different stages, (39) 836. critical period of growing season, (39) 811.	from different parts, (36) 27.
culture, (26) 830; (35) (33); (37) 337.	in, (27) 740; (30) 331. of flowering time in, (28) 531; (35) 329.
field, culture—	inoculation experiments, (28) 233; (28) 420.
at high altitudes, (39) 810. experiments, (28) 532; (29) 226, 735; (32) 132, 526, 528, 529; (35) 827; (37) 30, 227; (38) 333, 634; (39) 124, 227, 735; (40) 735.	insects affecting, (26) 857. irrigation experiments, (28) 230.
526, 528, 529; (35) 827; (37) 30, 227; (38) 333,	Jerusalem, varietics, (30) 525.
654; (39) 124, 227, 735; (40) 735. for hav and seed. (37) 436.	legumins in, (40) 607. liming experiments, (36) 27.
for hay and seed, (37) 436. for winter forage, (38) 735.	limitation studies, (36) 839; (39) 747.
in eastern Oregon, (32) 730. New Mexico, (40) 18.	mulching v. clean culture, (33) 534. nitrogen metabolism, (37) 24.
SOULDATH TEXAS, (32) 332.	nodule bacteria, (39) 338,
western Nebraska, (32) 224. under dry farming, (31) 429; (34) 734.	of Burma, names and descriptions, (33) 229. oil content, (27) 716.
manage and assessmently (as) and (as) ease	

Peas-Continued.	Peat—Continued.
partridge, as green manure, (32) 423.	litter, absorptive power, (33) 722, 817, 818.
partridge field, analyses, (29) 463.	litter as manure absorbent, (34) 517. litter machines, descriptions and tests, (27) 727.
phosphoric acid content, (10) 508. plant nutrients removed by, (29) 837.	litter, treatise, (34) 624.
precipitin test for, (31) 733.	machinery, tests, (34) 589.
preparation and use, (32) 253. preservation, (29) 312.	moistening, (33) 322. molasses, digestibility, (30) 568.
preservation by pressure, (32) 416.	moors and water powers, economic importance
preservation by pressure, (32) 416. production in Spain, (28) 736. ratio of tops to roots, (31) 628, 733.	(32) 820. moss as feeding stuff, (32) 259.
relation to climate, (28) 27.	moss litter manure, notes, (26) 527. moss, use as litter, (31) 30, 272.
respiration as affected by electricity, (31) 33.	moss, use as litter, (31) 30, 272. mull, methods of analysis, (31) 806.
root development with other crops, (26) 129.	nitrogen as affected by heat, (39) 617.
root growth at various temperatures, (36) 28.	nitrogen, formation of nitrates from (29) 624.

root cuttings, chimeras, and sports, (37) 434. root systems of, (31) 514, 733, 830; (33) 526. rye stalk disease affecting, (26) 546.	insects affecting, (32) 340. periodicity in, (28) 39. rusts affecting, (28) 646. treatise, (33) 221. tumors in, (36) 46. twining of, (35) 431. types of segregation in, (39) 123
rve stalk disease affecting. (26) 546.	types of segregation in. (39) 123.
sait water, heredity in, (36) 27.	types of segregation in, (39) 123. urease in, (27) 633.
	useiui, textbook, (33) 96.
sap extraction from by pressure, (39) 224: seashore, as affected by water supply, (37) 27. seed, of Vermont, (33) 330. seedling, tin cans v. pots for, (29) 236. self-protection against Ouscuta, (35) 460.	utilization of— fertilizers and soil nutrients by, (32) 747.
seed, of Vermont, (33) 330.	insoluble phosphates by, (26) 321; (28) 526.
seedling, tin cans v. pots for, (29) 236.	nitrates by, (35) 28.
self-sterile, behavior in intercrosses, (37) 820.	solar energy by. (31) 221.
self-sterile, self-fertility in, (38) 226.	sulphur by, (34) 331.
self-sterile, behavior in intercrosses, (37) 820. self-sterile, self-fertility in, (38) 226. self-sterility in, (38) 426, 823. senile changes in, (35) 222.	insoluble phosphates by, (26) 321; (28) 526. nitrates by, (35) 28. phosphates by, (31) 823. solar energy by, (31) 221. sulphur by, (34) 331. variegated, anatomy of, (33) 724. varieties, grouping, (28) 639. velocity of transmission of excitation in, (34) 29. water-
	velocity of transmission of excitation in. (34) 29
sex cycle, (38) 525.	water-
sox development in relation to national, (34)	absorbing power, (39) 731.
824. sex evolution in, treatise, (32) 725.	absorption and evaporation, (40) 27.
sex reproduction in, (34) 526.	culture experiments, (36) 731. culture, new method, (33) 628.
shipping to America, (32) 833.	gas exchange in, (35) 431. nitrogen fixation by, (38) 419. relations, (30) 223; (32) 429. relations, blocolloid exhibiting, (40) 28.
shortening vegetative period of, (30) 725. smoke injured, microscopic analysis, (26) 532.	nitrogen nxation by, (38) 419, relations (30) 223 (32) 429
smoke injury to, (34) 744; (37) 130.	relations, biocolloid exhibiting, (40) 28.
sodium requirements, (28) 730.	relations, representation, (28) 37.
solution culture experiments, technique, (40) 817.	requirements, (29) 825; (31) 327, 729; (32)
spore-bearing, hybridization in, (31) 823.	transfer in, (36) 29.
starch formation and plastids in, (28) 524. starch formation in, (34) 627.	transpiration in, (27) 223; (32) 426.
Starch formation in, (34) 527.	watering experiments, (37) 325. wild economic, of South Kamerun, (30) 239.
starch-yielding, (40) 339. statolith apparatus in, (36) 729.	wild, in cookery, (35) 859.
statolith apparatus in, (36) 729. stem constrictions of, (31) 343.	wild, in cookery, (35) 859. wild, use as food, (33) 461. wild, use as food by Indians, (35) 470.
sterile, producing viable seed from, (28) 837. sterility and inconceptibility, (39) 632.	wild, use as food by Indians, (35) 470. wilting, (34) 728; (36) 320; (40) 427.
sterilization, (29) 408.	wilting
stimulation—	and incipient drying, (38) 522. coefficients, (26) 628; (27) 223; (28) 823.
by electricity, (28) 326, 529. by poisonous substances, (27) 131.	coefficients, (26) 628; (27) 223; (28) 825. drying, and returgescence, (34) 825.
in, (36) 525.	points. (35) 21.
treatise, (27) 331.	studies, (27) 515; (29) 523; (31) 522, 725.
with nonessential elements, (39) 730.	winter botany, (39) 628.
stomatal movement in, (26) 627. structure terminology, (29) 665.	winter characters, (39) 628. woodland, emergence of aerial organs, (37) 525.
submerged land, photosynthesis in, (32) 329.	woody-
succulent—	anatomy, (37) 821.
as affected by light, (26) 430. automatic movements in, (35) 27.	annual growth of, (35) 841. bibliography, (26) 240; (34) 435; (39) 245
behavior under desiccation, (36) 327.	cambial activity, (37) 127.

Plants—Continued.	Platygasterinae, life history and key, (38) 565.
woody—continued.	Platymesopus erausquini n.sp., description, (31)
food reserve in, (40) 425. forcing, (28) 837; (30) 642; (36) 431. of German East Africa, (29) 643.	355.
forcing, (28) 837; (30) 642; (36) 431.	Platymetopius spp., notes, (27) 859.
of German East Africa, (29) 643.	Platynota rostrana, notes, (27) 150; (28) 451.
Kentucky, (29) 41.	Platyomus lividigaster—
Kentucky, (29) 41. Oahu lowlands, (34) 315. Pikes peak region, (26) 140.	life history, (29) 253.
Switzerland, (35) 842	notes, (27) 656.
Switzerland, (35) 812. periodicity in, (29) 142. phloem and burk diseases of, (34) 442.	Platypedia arcolata on olive, (38) 157.
phloem and bark diseases of. (34) 442.	Platypeza of Virginia, (34) 857.
pocket guide, (37) 746.	Platybouldne, key, (39) 65.
recovery from hail wounds, (29) 131.	Platypsylla castoris, parasitism, (31) 60.
reserve fat in, (35) 225.	Platypsylla castoris, massitism, (31) 60. Platypus sp., notes, (32) 552. Playgrounds, development and care, (30) 615.
rest period in, (32) 437; (33) 223.	Playgrounds, development and care, (30) 615.
root growth of cuttings, (39) 826. wound parasitism and predisposition in, (35)	Plectodiscella—
347.	piri n.g. and n.sp., description, (33) 649. piri, notes, (33) 350.
wounded, heat evolution by, (27) 830.	veneta, life history and treatment, (38) 853.
wounded, infection, (30) 243.	veneta n.sp., description, (38) 252.
zymaso formation in, (39) 733.	veneta, treatment, (39) 457.
Plasma—	Plectrodera scalator, see Cottonwood borer.
membrane as affected by anesthetics, (26) 823. membrane in plants, (38) 523.	Pleetrothrips n.sp., from Jamaica, (36) 550.
Plasmas—	Pleiosperimum n.g. and n.spp., descriptions, (36) 433.
collocation within the cell, (39) 574.	Plenodomus -
living, coalescence of, (30) 224.	destruens-
Plasmodia, photomicrographs of, (29) 478.	distribution and prevalence, (33) 743.
Plasmodiophora brassicae, see Cabbage clubroot.	n.sp., description, (30) 351.
Plasmodiophoraceae, studics, (27) 46; (31) 145. Plasmodium spp., cultivation in vitro, (28) 179.	studies, (39) 851; (40) 317.
Plasmolysis—	fuseomaculans— growth and pyenidium formation, (34) 647.
false, in cel grass, (20) 134.	n.comb., notes, (38) 453.
false, in young cells, (30) 130.	studies, (35) 653; (36) 746.
false, in young cells, (30) 130. in plant cells, (29) 627.	sp. on apples, (34) 744.
Studies, (27) 829.	Pleosphaerulina on alfulfa, (33) 848; (36) 450.
Plasmopara— cubensis, notes, (29) 243; (33) 146.	Pleospora—
nivea, notes, (30) 210, 746.	batumensis n.sp., description, (27) 546. disrupta, notes, (31) 539.
viticola—	eriobotryae n.sp., description, (31) 746.
development and treatment, (26) 550.	herbarum, notes, (29) 245.
germination of winter spores, (29) 350; (37)	lespedezae n.sp., description, (31) 242.
252.	lespedozae n.sp., description, (34) 242. n.sp., notes, (28) 52. sp., affecting Lolium, (20) 545.
infection of grape leaves by. (26) 550.	sp., injurious to figs., (26) 449.
incubation period, (29) 350. infection of grape leaves by, (26) 550. notes, (27, 750; (36) 347; (37) 550; (38) 651; (39) 56, 356, 357; (40) 53. relation to temperature, (27) 49. spore germination and infection with, (28) 749.	trichostoma, treatment, (32) 145, 341.
(39) 56, 356, 357; (40) 53.	Plesiocoris rugicollis—
relation to temperature, (27) 49.	notes, (32) 849.
740.	notes, (32) 849. remedies, (38) 58. studies, (40) 60.
studies. (26) 450, 851; (28) 54, 55, 244, 448;	Studies, (40) 60.
studies, (26) 450, 851; (28) 54, 55, 244, 448; (29) 155, 249; (30) 452; (31) 346; (33) 55, 248, 545; (34) 246, 352, 544; (35) 646.	Plesiothrips, crection, (34) 356. Plesispa reichei, notes, (40) 260.

Potatoes—Continued.	Potatoes-Continued.
growth—continued.	production—continued.
in artificial light, (28) 735. relation to temperature and moisture,	in United States, (26) 293.
(40) 19.	1918 program, (38) 834. propagation by cutting, (36) 636.
shade, (29) 130. of basal and terminal buds, (39) 536, 629.	protection against frost, (27) 421.
on acid soil, (40) 324.	purin content, (40) 205. quality as affected by weather, (26) 415.
hail injury to, (35) 734.	quarantine regulations, (31) 149.
handling and marketing, (36) 136. handling and storing, (39) 149.	radioactive fertilizers for, (31) 129; (35) 628. raising, illustrated lecture, (39) 498.
harvesting and storing, (30) 197; (36) 336.	rate of seeding tests, (27) 335.
narvesting experiments, (26) 836.	raw, antiscorbutic value, (40) 565.
hereditary characters in, (28) 632. home-mulched v. northern seed, (32) 631; (33)	rejuvenescence, (30) 730; (40) 732. relation between size of seed and yield, (26) 434.
330,	relation of nitrogen to protein content. (28) 636.
hypertrophy-structure in, (27) 151. identification of varieties, (33) 297.	relation of tops to roots, (31) 733. relation to climate, (28) 27.
immature, for seed, (37) 337.	relative yielding capacity, (40) 625.
importance of clean seed, (37) 96.	removal of blossoms, (40) 138.
improvement, (26) 437, 636; (28) 43; (32) 830; (38) 827.	respiration and decay, (29) 565; (32) 111. respiration investigations, (34) 523.
improvement by seed selection, (32) 230, 630.	rest period in, (30) \$25; (32) 129; (36) 223; (40) 224, root systems of, (31) 515.
improvement, tuber-unit method, (28) 835. in the dietary, (33) 695.	rotation experiments, (33) 429, 829; (36) 528, 829;
ingrowing sprouts of (26) \$28. (28) 734	(38) 129; (40) 229, 331, 430, 734. score card for, (28) 43.
inheritance of high starch content, (27) 500.	score card for, (28) 43. second crop, (39) 341.
240, 753; (31) 232; (33) 352; (36) 550; (37) 157;	seed-
inheritance of high starch content, (27) 500. insects affecting, (26) 553, 631; (29) 259, 336; (30) 240, 753; (31) 232; (33) 352; (36) 550; (37) 157; (38) 555; (39) 358, 461, 466, 861; (40) 753. internal spotting, (27) 349.	certification, (33) 336; (38) 535; (40) 846.
irrigated, manuring experiments, (40) 421	certification in Germany, (34) 444. cold storage v. cellar storage, (29) 336.
irrigation, (28) 484; (29) 736; (31) 328; (39) 442.	
interial spotting (27) 549. irrigated, manuring experiments, (40) 421. irrigation, (28) 484; (29) 786; (31) 328; (39) 442. irrigation experiments, (27) 531; (28) 130, 133, 135, 230, 588, 827; (29) 32, 138, 182, 226, 425, 426; (32) 37, 186, 225, 531; (33) 286, 827, 884; (34) 229, 721; (35) 636; (36) 35; (37) 30, 37, 84, 740, 822; (38) 320, 633; (39) 132; (40) 331. judging, (36) 97. lady beetles affecting, (30) 255	disinfection, (32) 528.
(32) 37, 186, 225, 531; (33) 286, 827, 884; (34) 229.	for Ontario, tests, (39) 838.
721; (35) 636; (36) 35; (37) 30, 37, 84, 740, 822;	formaldehyde disinfection, (30) 539, 540.
(38) 320, 633; (39) 132; (40) 331.	from sprayed plants. (40) 732.
and bottom antounds, (ou) noor	Government farm in India, (40) 625.
lessons on, (28) 598. liability to disease, (40) 157.	growing in Nova Scotia, (38) 646.
lightning injury, (33) 345; (40) 645.	improvement, (29) 230; (37) 823.
lime for, (28) 223.	cutting and sprouting, (40) 135. disinfection, (32) 528. for fall planting, (38) 535. for Ontario, tests, (39) 538. formaldebyde disinfection, (30) 539, 540. from light soils for heavier soils, (33) 531. from sprayed plants, (40) 732. Government farm in India, (40) 625. growing in Nova Scotis, (38) 646. handling and storing, (28) 638. improvement, (29) 230; (37) 232. inspection and certification, (31) 345. inspection in Wisconsin, (31) 736.
liming experiments, (29) 223; (37) 733. lining and loading cars, (40) 138.	judging. (28) 243.
loss in boiling, (34) 660.	local v. imported, (29) 331; (40) 434. peelings and cuttings for, (40) 138.
manurial value of tops, (39) 836.	peelings and cuttings for, (40) 130.
market types, (38) 535. marketing, (31) 893; (33) 40, 693; (34) 288; (38)	plat method of improvement, (39) 740. preparation, (39) 536, 740; (40) 135, 630. production, (37) 753, 800; (39) 841.
535, 834.	production, (37) 753, 800; (39) 841. production and handling, (29) 141.
marketing cooperatively, (29) 392; (33) 491; (34) 288.	propagation, (39) 534.
methods of analysis, (28) 510.	propagation, (39) 534. selection, (28) 535, 738; (29) 37; (30) 197, 228,
methods of variety testing, (26) 436. microscopic tests, (27) 341.	637; (34) 338, 494; (35) 396, 696; (36) 638, selection and preparation, (32) 739.
mulching experiments, (33) 526,	selection and preparation, (32) 739. selection and treatment, (31) 333.
mutation in, (31) 137. nomatodes affecting, (26) 748.	sprouted v. unsprouted, (28) 535; (30) 333, 832.
new nematode infesting, (38) 147.	sprouting before planting, (32) 35; (33) 331;
notes, (29) 338.	(34) 530. storage, (38) 437.
on Caribou loam, (39) 335. origin, (26) 529; (31) 137, 833.	tests, (39) 131, 334, 337, 535, 740.
origin and early culture, (38) 332, 535.	treatment, (39) 337, 740, 755; (40) 51, 450, 734,
origin of cultivated varieties, (28) 530.	746, 847. seeding experiments, (29) 224, 226, 425; (30) 134;
osmotic pressure in, (30) 228. oxidases in, (26) 547; (31) 748. Pearl, bastard type, (31) 833. phloem necrosis in, (33) 52.	(33) 227; (38) 132, 534; (39) 127, 337, 536; (40)
Pearl, bastard type, (31) 833.	732, 734. seeding experiments with skins, (39) 537.
phosphorus content, (27) 461.	seedling, culture, (31) 643.
physiological abnormalities of, (30) 747.	selection, (38) 197; (39) 541. selection experiments, (33) 233, 526, 698; (37) 32.
planting—	228, 240; (38) 433; (39) 740; (40) 429, 523.
dates, (37) 317, 732; (40) 31, 431. dates and distances, (40) 630.	selection of edible types, (30) 39.
experiments, (26) 833; (31) 132; (37) 538; (38)	sensitivity to poison, (35) 457. small v. large tubers for planting, (33) 834.
634.	Solonum commerconii resembling, (28) 130.
whole v. cut tubers, (38) 534. potash fertilizers for, (26) 526.	spraying, (20) 194; (37) 538; (38) 135; (39) 345, 541; (40) 747, 748.
potash hunger, (37) 800.	spraying-
preparation for exhibition, (28) 738. preservation, (39) 316.	experiments, (27) 237, 738; (28) 346, 433; (29) 845; (30) 49, 449, 847; (31) 137; (32) 158, 229,
preservation by pressure, (32) 410.	431, 444, 547; (33) 40, 336; (35) 527, 831; (36)
preservation with factic acid starter, (31) 467.	431, 444, 547; (33) 40, 336; (35) 527, 831; (36) 49, 847; (37) 228; (38) 235; (39) 337, 755, 853.
production— and consumption, (39) 838.	v. dusting, (32) 551; (33) 338, 636; (34) 158. with Bordeaux mixture, (26) 548.
in 1911, (26) 595.	with lime arsenate, (40) 164.
in United Kingdom, (26) 793.	sprouted, food poisoning by, (40) 557.

Potatoes—Continued.	Potatoes—Continued.
sprouting— as affected by chemicals, (32) 829.	winter storage, (35) 495. wound stimulation and closure in, (26) 826.
in relation to soil moisture, (35) 527.	yield as affected by—
tests, (26) 330. starch content. (35) 108.	color of seed, (33) 433. hilling, (29) 431.
starch content, (35) 108. steamed and dried, for pigs, (30) 470.	removal of tops, (37) 138.
steamed, composition and digestibility, (31) 467. steaming and ensiling, (31) 467.	hilling, (29) 431. removal of tops, (37) 138. size of soed, (28) 232; (36) 231. source of seed, (29) 730; (31) 833.
storage, (29) 090; (38) 59; (39) 110.	WILLE-DIGLES, (20) 40.
storage— and marketing, (36) 195.	yield— in relation to rainfall, (34) 319.
	in relation to weather, (33) 716; (35) 618;
experiments, (29) 425; (38) 835; (39) 639.	(38) 317. on alfalfa stubble, (33) 828.
collars, (19) 191. collars, description, (38) 391. experiments, (29) 425; (38) 835; (39) 639. house, plans, (38) 137. in sand, (31) 736. stored, chemistry of, (32) 111.	yields, (20) 228; (10) 735.
stored, chemistry of, (32) 111.	Potentilla fruiticosa, notes, (29) 741. Poterium canadense, analyses, (27) 371.
	Potomac River -
studies for schools, (27) 196. subsoiling experiments, (37) 732.	pollution of, (35) 286. sediments, analyses, (30) 223.
sugar in, (33) 223, 310.	Potsherds, effect on nitrification, (40) 21.
surplus, utilization, (31) 149.	Poudrette, fertilizing value, (27) 337; (29) 129; (35) 135, 323.
subsolling experiments, (37) 732. sugar in, (33) 223, 310. sulphur as fertilizer for, (30) 139. surplus, utilization, (31) 149. susceptibility to diseases, (28) 535. susceptibility to Irish blight, (26) 636. swamp, description and culture, (36) 637.	Poudro, analyses and fertilizing value, (30) 26.
swamp, description and culture, (36) 637.	Poultry—see also Chickens, Ducks, Fowls, Hens etc.
Symplosis and tuberization in, (30) 130.	accounts, (37) 690.
testing disease-resistant qualities, (28) 53. thinning and spacing experiments, (33) 526.	animal food for, (33) 572. appliances, construction, (27) 773.
thinning experiments, (34) 736.	appliances, construction, (27) 773. appliances, description, (33) 783; (34) 377.
translocation of mineral constituents, (34) 427. transpiration as affected by sprays, (31) 825.	artificial insemination, (31) 474. artificial light for, (40) 280. as a food stuff, (28) 459.
transportation regulations, (30) 346. treatise, (28) 738; (33) 531; (37) 533, 543, 645.	as a food stuff, (28) 459.
treatment with—	as affected by— rations from single plant sources, (33) 368.
corrosive sublimate, (29) 242.	restricted rations, (36) 866.
formaldehyde, (27) 650. liquid air, (38) 128.	as commercial enterprise, (39) 480. associations, county, notes, (28) 795.
liquid air, (38) 128. tuber color in, (36) 147. tuber color in, (36) 147.	ussociations, county, notes, (28) 795. associations, notes, (27) 400.
tuber formation in, (27) 224; (30) 332. tuberous growth at expense of roots, (35) 330.	barred breeds, history, (27) 72. bibliography, (26) 669; (28) 599; (33) 575. breeders in Montana, (36) 473.
use as food, (33) 364. use in bread making, (33) 162, 865; (40) 556, 863,	breeders in Montana, (36) 473. breeding, (31) 509.
864.	breeding—

use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studies, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of fertilizers, (26) 224; (27) 520.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prafrie dogs, (38) 80.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 119, 129. insecticidal action, (26) 758. insecticidal action, (26) 758. unsecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (34) 128.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prafrie dogs, (38) 80.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 119, 129. insecticidal action, (26) 758. insecticidal action, (26) 758. unsecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (34) 128.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hreditary transmission, (36) 383.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenelate theory of indicators, (36) 711; (37)	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hreditary transmission, (36) 383.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenelate theory of indicators, (36) 711; (37)	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prafrie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hcreditary transmission, (36) 383. immunization, (26) 579, 552, 676, 782; (30) 281, 282; (31) 880, (32) 180; (33) 387; (37) 480, 690;
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. R&b, substitutes for, (32) 722.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 676; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prafrie dogs, (38) 80. epizootic. in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (20) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (33) 580. infectivity of saliva during presymptomatic
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studies, (38) 119, 129. insecticidal and latvicidal value, (34) 359. Quinone— effect on— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 327. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Ráb, substitutes for, (32) 722. Ráb, use in preparing rice seed beds, (35)[138.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880, hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studies, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, substitutes for, (32) 722. Råb, use in preparing rice seed beds, (35)[138.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880, hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studies, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (34) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, substitutes for, (32) 722. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock polsoning by, (39) 787.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rables— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 676; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. diseamination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (36) 75; (36) 79; (40) 86. organism, cultivation, (30) 79.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 119, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, substitutes for, (32) 722. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 676; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prafrie dogs, (38) 80. epizootic. in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (20) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (33) 580. infectivity of saliva during presymptomatic stago, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 79. outbreak, (39) 582.
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studies, (38) 119, 129. insecticidal and latvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 327. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Ráb, substitutes for, (32) 722. Ráb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 magrophages, fixation of tetanus antitoxin by,	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 290. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 580. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prafrie dogs, (38) 80. epizootic. in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 552, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 70. outbreak, (39) 582. outbreak in sheep, (28) 586.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Réb, substitutes for, (32) 722. Réb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macrophages, fixation of tetanus antitoxin by, (26) 177.	typhoid-like disease in, (29) 288. vifality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 70. outbreak, (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271.
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macrophages, fixation of tetanus antitoxin by, (26) 177. mest, organic bases in, (26) 563. serum, anabylyatoxin produced in, (37) 579.	typhoid-like disease in, (29) 288. vifality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 670; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (38) 80, 880. disease resembling, in dogs, (26) 280. diseamination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic. in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 70. outbreak, (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271. paralysis in, (28) 881. prevalence in Germany, (28) 583.
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macrophages, fixation of tetanus antitoxin by, (26) 177. mest, organic bases in, (26) 563. serum, anabylyatoxin produced in, (37) 579.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (20) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 70. outbreak, (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271. paralysis in, (28) 881. prevalence in Germany, (28) 583. prevalence in Germany, (28) 583. prevalence in Germany, (28) 583.
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studies, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 128. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Ráb, substitutes for, (32) 722. Ráb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macrophages, fixation of tetanus antitoxin by, (26) 177. mett, organic bases in, (26) 563. serum, anaphylatoxin produced in, (37) 579. serum, proteins of, (28) 875. skin clippings, fertilizing value, (29) 129.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 676; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. diseamination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Réb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macroplages, fixation of tetanus antitoxin by, (26) 177. meat, organic bases in, (28) 563. serum, anaphylatoxin produced in, (37) 579. serum, proteins of, (28) 875. skin clippings, fertilizing value, (29) 129. ticks, parasite of, (26) 863. Rabbits— agouti-lanck color in, (29) 466. Angora, rearing for wool, (39) 279. as a pest in Alaska, (32) 54. as affected by killed tubercle bacilli, (28) 377. Bacterium tularense in, (33) 451. breeding, (30) 874.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic. in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 70. outbreak; (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271. paralysis in, (28) 881. prevalence in Germany, (28) 583. prevalence in Frussia, (27) 181. quiet, in bovines, (26) 485. relation to fly larvac, (27) 560. review of literature, (30) 79. studies, (40) 183. treatise, (29) 679, 883; (31) 480; (33) 580, 774; (35) 575; virus—
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 128. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, substitutes for, (32) 722. Råb, use in preparing rice seed beds, (35) 138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macrophages, fixation of tetanus antitoxin by, (26) 177. meat, organic bases in, (26) 663. serum, proteins of, (28) 875. skin clippings, fertilizing value, (29) 129. ticks, parasite of, (26) 863. Rabbits— agouti-lanck color in, (29) 466. Angora, rearing for wool, (39) 279. as a pest in Alaska, (32) 64. as aflected by killed tubercle bacilli, (28) 377. Bacterium tularense in, (33) 451. breeding, (30) 874. breeding, economic significance, (26) 669.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (38) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 79. outbreak, (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271. paralysis in, (28) 881. prevalence in Pinlippines, (26) 89. prevalence in Prussia, (27) 181. quiet, in bovines, (20) 485. relation to fly larvae, (27) 580. review of literature, (30) 79. studies, (40) 183. treatise, (29) 679. treatment, (29) 679, 883; (31) 480; (33) 530, 774; (35) 575. virus— action of ether on, (39) 588. as affected by phenols, (26) 88.
use against rabies, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. In soils, studies, (38) 119, 129. insecticidal action, (26) 758. Insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (34) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macroplages, fixation of tetanus antitoxin by, (26) 177. ment, organic bases in, (26) 563. serum, anaphylatoxin produced in, (37) 579. serum, proteins of, (28) 875. skin clippings, fertilizing value, (29) 129. ticks, parasite of, (26) 863. Rabbits— agouti-liack color in, (29) 466. Angora, rearing for wool, (39) 279. as a pest in Alaska, (32) 54. as affected by killed tubercle bacilli, (28) 377. Bacterium tularense in, (33) 451. breeding, (30) 874. breeding, (30) 874. breeding in Germany, (32) 173.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophaga saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 679; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (36) 80, 880. disease resembling, in dogs, (26) 280. dissemination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (20) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 79. outbreak, (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271. paralysis in, (22) 881. prevalence in Germany, (28) 583. prevalence in Fusia, (27) 181. quiet, in bovines, (20) 485. relation to fly larvae, (27) 560. review of literature, (30) 79. studies, (40) 183. treatise, (29) 679, 883; (31) 480; (33) 590, 774; (35) 575. virus— action of ether on, (39) 588. as affected by phenols, (26) 88. culture experiments, (31) 379.
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studievi, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of iertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macrophages, fixation of tetanus antitoxin by, (28) 177. meat, organic bases in, (26) 563. serum, anaphylatoxin produced in, (37) 579. serum, proteins of, (28) 875. skin clippings, fertilizing value, (29) 129. ticks, parasite of, (26) 863. Rabbits— agouti-lack color in, (29) 466. Angora, rearing for wool, (39) 279. as a pest in Alaska, (32) 54. as affected by killed tubercle bacilli, (28) 377. Bacterium tularense in, (33) 451. breeding, (30) 874. breeding, (30) 874. breeding in Germany, (32) 173. breeds and breeding, (38) 577. care and feeding, (28) 173.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 670; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (38) 80, 880. disease resembling, in dogs, (26) 280. diseamination by bats, (27) 285. dissemination by prairie dogs, (38) 80. epizootic, in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 582, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. Negri bodies in, (29) 379; (36) 179. notes, (26) 373; (27) 77, 884; (35) 75; (36) 79; (40) 86. organism, cultivation, (30) 70. outbreak, (39) 582. outbreak in sheep, (28) 586. papers on, (32) 271. paralysis in, (28) 881. prevalence in Philippines, (26) 89. review of literature, (30) 79. studies, (40) 183. treatise, (29) 679. treatment, (29) 679, 883; (31) 480; (33) 590, 774; (35) 575. virus— action of ether on, (30) 588. as affected by phenols, (26) 88. culture experiments, (31) 379. filtrate, studies, (31) 550.
use against rables, (29) 883; (31) 480; (33) 580, 774. Quinolin— as a wood preservative, (27) 314. bases in dye making, (40) 710. disappearance in soils, (36) 432, 725. effect on plant growth, (36) 212. in soils, studiev, (38) 118, 129. insecticidal action, (26) 758. insecticidal and larvicidal value, (34) 359. Quinone— effect on— action of lertilizers, (26) 224; (27) 520. plant growth, (31) 126. soil microorganisms, (31) 27. wheat, (28) 140; (34) 325. phenolate theory of indicators, (36) 711; (37) 409; (40) 202. Quittor, Bayer's operation, (27) 576. Råb, use in preparing rice seed beds, (35)[138. Rabbit— brush, stock poisoning by, (39) 787. ear mange, notes, (35) 80. injuries to apple trees, prevention, (34) 250 macroplages, fixation of tetanus antitoxin by, (20) 177. meat, organic bases in, (28) 563. serum, anaphylatoxin produced in, (37) 579. serum, proteins of, (28) 863. Rabbits— agouti-lanck color in, (29) 466. Angora, rearing for wool, (39) 279. as a pest in Alaska, (32) 54. as affected by killed tubercle bacilli, (28) 377. Bacterium tularense in, (38) 451. breeding, (30) 874. breeding, (30) 874. breeding, (60) 674. breeding, (60) 874. breeding, (60) 877. care and feeding, (28) 173. care and deeding, (28) 173. care and management, (37) 775.	typhoid-like disease in, (29) 288. vitality as affected by lead, (32) 861. Rabdophagn saliciperda,notes and remedies, (29) 558. Rabies— a typical case of, (26) 280. control, (36) 880; (37) 274, 577. diagnosis, (26) 676; (27) 475, 479; (28) 881; (31) 283, 580; (33) 180; (38) 80, 880. disease resembling, in dogs, (26) 280. disease resembling, in dogs, (26) 280. diseamination by prairie dogs, (38) 80. epizootic. in Brazil, (27) 285. disemination by prairie dogs, (38) 80. epizootic. in Brazil, (27) 285. etiology, (31) 880. hereditary transmission, (36) 383. immunization, (26) 579, 552, 676, 782; (30) 281, 282; (31) 880; (32) 180; (33) 387; (37) 480, 690; (38) 580. infectivity of saliva during presymptomatic stage, (30) 682. deposit from atmosphere, (34) 615. earth, fertilizing value, (33) 123. emanations of soils, (31) 20.	winter storage, (38) 442.
earth, fertilizing value, (33) 123.	Radium—
emanations of soils, (31) 20.	as fertilizer, (32) 821; (35) 133. effect on blood, (40) 767.
emanations, relation to weather, (10) 314.	effect off blood, (40) 707.
fertilizer, effect on growth of oat's, (35) 218. fertilizer, tests, (32) 519. minerals, effect on wheat, (27) 826. ores, fertilizing value, (27) 128; (34) 821, 822; (35)	effect on germination of seeds, (34) 626, 730, effect on plants, (34) 223; (36) 526.
minerals offeet on wheat (27) 896	emanation and weather at Manula, (33) 717.
ores, fertilizing value, (27) 128: (34) 821, 822: (35)	emanation from water, (38) 510.
628; (39) 116.	emanations-
products in the atmosphere, (30) 619.	effect on plant growth, (31) 821.
rays, researches with, (30) 202.	in soils. (27) 418.
substances as fertilizers, (32) 324.	of the atmosphere, (31) 20, 511; (33) 211.
Radioactivity—	of the atmosphere, (31) 20, 511; (33) 211. fertilizing value, (33) 625; (34) 31, 331.
determination, (36) 414.	forcing plants with, (29) 151.
determination in water, (35) 187.	illumination, effect on plants, (27) 134.
effect on— derelapment of plants (28) 520 731	in honey, (37) 570. in soils of United States, (31) 418.
development of plants, (28) 529, 731. germination, (29) 326; (30) 131.	in water from Gulf of Mexico, (34) 118.
plant growth, (30) 29, 224, 524, 825; (31) 129;	manufacture waste, fertilizing value, (30) 821.
(32) 34; (35) 523.	manufacture waste, fertilizing value, (30) 821. nature and use, (26) 580.
soil organisms, (33) 23.	rays, effect on seedlings (27) 630.
in Minnesota Solis. (33) 417.	therapy, effect on metabolism in lymphatic
of soil gas, (33) 211.	therapy, effect on metabolism in lymphatic leukemia, (37) 267. treatment of leukemia, effect on metabolism,
of soil gas, (33) 211. soils and water, treatise, (33) 809. soils of United States, (31) 418.	treatment of feutemia, effect on metabolism,
solls of United States, (31) 418.	(40) 566.
spring water, (31) 332. progress in 1911, (27) 616; (40) 801.	use in forcing plants, (27) 437; (28) 228, 825. Raffla, production, (40) 241.
relation to metabolism in plants (32) 320	
relation to metabolism in plants, (32) 329. relation to plant life, (28) 228.	Raffinose—
Radiographic examinations, preparations for, (32)	bromination as affected by catalyzers, (40) 613.
678.	characteristics, (26) 116. determination, (26) 709; (34) 313; (40) 313.
Radiotransmission and weather, (31) 615.	determination in—
Radish—	plants, (35) 206.
and charlock, hybridization, (36) 130.	presence of sucrose, (36) 806.
cabbage hybrid, description, (31) 236.	raw sugars, (26) 115, 116. sugar beets, (30) 812.
maggot— notes, (29) 158.	sugar beets, (30) 812.
remudies (30) 355	effect on polarization of beet molasses, (38) 113.
screening, (37) 261.	isolation from beet sugar products, (26) 313. occurrence in jute seed, (37) 710.
remedies, (30) 355. screening, (37) 261. studies, (30) 362.	occurrence in row sugars (26) 115, 116.
seed, large v. small, (31) 634.	occurrence in raw sugars, (26) 115, 116. physiological behavior, (37) 571; (40) 171.
seed, viability, studies, (38) 127.	preparation, (32) 711.
skin extract as an indicator, (26) 108.	relation to inclasses formation. (26) 116.
weevil, notes, (32) 651.	Rag refuse, analyses, (28) 523. Rag waste, fertilizing value, (33) 125. Ragi, culture experiments, (32) 227; (38) 135, 433.
Radishes—	Rag waste, fertilizing value, (33) 125.
as affected by copper fungicides, (28) 247. assimilation of mineral salts by, (31) 135.	Ragi, culture experiments, (32) 227; (38) 135, 433.
hreeding experiments (36) 838	Ragi millet, notes, (26) 361.
breeding experiments, (36) 838. carbon nutrition of, (31) 426.	Ragweod—
Chinese, distribution of starch in, (34) 41.	analyses, (32) 169.
Chinese, distribution of starch in, (34) 41. culture, (26) 393, 539.	eradication, (27) 733.
culture—	gails, nows, (33) not.
experiments, (37) 742. in presence of sugar, (35) 633.	great, analyses, (34) 39. leaf variation in, (27) 741.
in presence of sugar, (55) 655.	occurrence of barium in. (26) 432.
under shade, (27) 741. development as affected by urea products, (26)	occurrence of barlum in, (26) 432. pollen, composition, (37) 612; (39) 803.
229.	pollen, protein extract, (40) 607.
effect on following corn crop, (38) 135.	western, water requirement, (32) 127.
elongation of hypocotyl, (28) 39, 739.	Ragwort—
enemies of. (29) 556.	life history and eradication, (36) 535.
fertilizer experiments, (27) 629; (28) 34, 815; (30)	poisoning cattle in England, (38) 82.
821; (34) 520, 532, 821; (36) 427; (37) 742.	Rahar, culture experiments, (37) 826.
food value, (36) 863.	Railroad—
greenhouse, carbon dioxid for, (39) 38.	rates, relation to cost of living, (29) 594.
growth— as affected by sulphur, (32) 724.	sanitation, notes, (30) 862. ties—
in partially sterilized soils, (26) 815.	antiseptic treatment, (27) 542.
in shade, (29) 130.	durability, (27) 348.
on calcareous soils, (31) 627, 816.	exploitation in New Mexico (31) 342
on calcareous soils, (31) 627, 816. historical study, (34) 532. insects affecting, (32) 753.	industry in Canada, (26) 242; (28) 645; (30) 744; (32) 238. preservation, (26) 241, 242; (27) 148; (28) 240, 442, 645; (29) 240, 344; (32) 47; (34) 240. seasoned v. unseasoned, treating, (26) 644. year Canada (20) 44.
insects affecting, (32) 753.	744; (32) 238.
Japanese, culture, (34) 41.	preservation, (26) 241, 242; (27) 148; (28) 240,
morphology and blology, (33) 638.	442, 645; (29) 240, 344; (32) 47; (34) 240.
preservation by pressure /20/ 418	seasoned v. unseasoned, treating, (26) 644.
purin content. (40) 205	use in Canada, (29) 843. Railroads—
radioactive fertilizers for. (35) 628.	and agriculture, relative productivity, (28) 687.
insects affecting, (32) 763. Japanese, culture, (34) 41. morphology and biology, (33) 638. mulching v. clean culture, (33) 534. preservation by pressure, (32) 416. purin content, (40) 205. radioactive fertilizers for, (35) 628. resistance to club root, (33) 52. response to carbon dioxid, (40) 830.	in Spain, agricultural extension work of, (31)
	400.
root disease affecting, (27) 651.	relation to agriculture. (27) 591: (28) 92.

Rails, North American, distribution and migration, (32) 55. Raimondia, notes, (31) 339. Rain- as drinking water supply in British Guiana, (29) 16. chemistry, (27) 317. chlorin content, (30) 418, 620, 815; (32) 121. composition, (31) 21, 416; (34) 15. dissernination of plant diseases by, (38) 47. dissolved oxygen in, (37) 620. effect on couclas, (27) 15. effect on composition of hay, (26) 235. excessive, in California, (28) 415. fertilizing value, (27) 317; (29) 209; (32) 419; (33) 716; (36) 19; (38) 619. forests, mountain, in Jamaica, (32) 748. gage, eight-day recording, (33) 118. gage exposure, effect, (34) 117. gage, "Scathwaite" pattern, (30) 118. gages, accuracy, (30) 17. nitric and nitrous acids in, (34) 118.	Rainfall—Continued. effect on—continued. crop yields, (34) 319. distribution of soil particles, (32) 511. electric energy consumption by irrigation plants, (36) 184. fruit crop in Norway, (40) 810. growth of trees, (31) 716. protein content of wheat, (28) 537; (30) 836. redwood, (38) 522. rubber and resin content of guayule, (30) 744. tree growth, (38) 415. water level in soils, (35) 813. water level in wells, (34) 319. yield and quality of wheat, (30) 662. yield of corn, (39) 418. yield of omilk, (28) 716. European, as affected by American temperatures, (31) 410. excessive, in London, (38) 511.
nitrogen, chlotin, and sulphates in, (34) 615; (38) 416. nitrogen content, (30) 211, 515; (31) 812; (32) 120, 121, 615, 616; (33) 617, (35) 620; (38) 509; (40) 724, 809. notes, (28) 897. of South Polar region, ammonia content, (26) 615. papers on, (27) 816. penetration of soil surfaces by, (29) 426. problem of denudation by, (40) 118. relation to grape downy mildew, (28) 448. relation to sunspots, (27) 718. smoke acids in, (32) 422. spotting of morning-gloies by, (29) 752. substances dissolved in, (40) 19. sulphuric and content, (40) 314. summer, of North Germany, (27) 510. transition to blue sky, (31) 213. tropical, (35) 619; (38) 415. water, hardness of, (39) 122. water of Leeds, analyses, (27) 122. Rainbows— ground, (36) 419. Liborizontal, on Lake Mendeta, (35) 115. papers on, (37) 115, 513. Rainfall—see also Precipitation. after battile, (32) 614. and evaporation in eastern Pennsylvania, (32) 34. gunfire, (38) 115, 511. raininess, (39) 718. run-off in Oalun, Hawail, (37) 513. run-off in Oalun, Hawail, (37) 513. run-off in Porto Rico, (32) 187. synoptic winds, relation, (35) 115. annual, of Scotland, (28) 213. annual, of Scotland, (28) 215. forests, (29) 85. Berkeley, California, (29) 510, 511; (35) 116. Georgetown, Demerana, (35) 420. Mazatlan, Markico, (28) 716. Montovideo, (34) 15. North Platte, (29) 225. Temple, (38) 334. compulme run-off from, (33) 775. conservation, (30) 17. distribution in France, (39) 18. discussion, (30) 17. distribution of tomatoes, (34) 636, composition of tomatoes, (34) 636,	greatest, (2b) 614. greatest at Washington, D. C., (38) 511. heaviest in British Isles, (38) 511. heaviest in British Isles, (38) 511. heaviest in British Isles, (38) 511. heaviest at Kansas City, (32) 614. at Montell, Texas, (29) 721. effect on soils, (33) 514. in Arkansas, (29) 510. in Louislana, (30) 417. in Alberta and Saskatchewan, (29) 85. Australia, (33) 616, 807; (34) 118; (40) 716. British Isles, (32) 25; (33) 20; (39) 210; (40) 314. California, (30) 713; (32) 120; (33) 716. Canada, (36) 617. China, (35) 618. Rainfall—Continued.	Ramularia-Continued.
May and June, (37) 315. measurement, (30) 17, 713; (40) 715.	trachystemonis n.sp., description, (35) 454.
measurement, (30) 17, 713; (40) 715.	violae, notes, (37) 550. Rana pipiens—
minimum, determination, (37) 315. "monsoon," (33) 118.	feeding habits, (31) 349.
onservations, long-period, value, (34) 319.	upper limit of temperature for, (35) 851.
observers, instructions to, (34) 509. on cold days, (36) 419.	Range—see also Grazing. carrying capacity tests with sheep, (39) 171.
records, use by waterworks engineers, (40) 715.	caterpillar, poisonous spines, (39) 561.
records, value, (33) 212.	caterpillar, studies, (36) 55. conditions in western United States, (29) 666.
regions of United States, (33) 318. relation to—	conditions on Mica Mountain, (30) 568.
battles, (34) 509.	cows, maintenance on yucca and sotol, (40)[277.
chestnut blight, (37) 557. corn and wheat production, (38) 317.	finder, description, (31) 341. grasses in North Dakota, (40) 299.
corn yield, (35) 618.	lands, public, management, (36) 791.
cranberry fruit rots, (38) 454. crop production, (26) 415; (28) 716.	lands, reseeding, (37) 437. management in New Mexico, (33) 268.
crop yields, (35) 14; (38) 509.	plants of Guam, (31) 467.
forests, (38) 510.	plants of Wallowa National Forest, (37) 818.
grape downy mildew, (38) 755. ground water, (33) 322.	plants, poisonous, see Plants, poisonous. preservation, relation to erosion, control, (39)
ground water, (33) 322. irrigation, (28) 316. lint length in cotton, (40) 827.	439.
magnetic storms, (38) 15.	stock, emergency leeds, (40) 270, 471.
moon, (27) 817.	stock, emergency feeds, (40) 276, 471. utilization, studies, (39) 773. white sage, destruction, (39) 172.
protein content of wheat, (33) 41.	Rangella vitalii, parasitic in dogs, (35) 785.
run-off, (30) 288. seepage, (27) 116.	Ranges— depleted, reseeding, (30) 35.
spring wheat yield, (30) 418; (33) 117; (39)	elevated, vegetation, (39) 810. improvement, (27) 528; (29) 224; (30) 334. in southern Arizona, (35) 439.
210. succeeding crops. (36) 209.	improvement, (27) 528; (29) 224; (30) 334.
succeeding crops, (36) 209. sun spots, (28) 211; (38) 115; (40) 416. water level, (33) 806.	management, (32) 227, 731.
Water level, (33) 806.	management in Southwest, (38) 447.
water supply, (34) 510. wheat culture, (28) 213, 638; (36) 440. wheat production in Australia, (36) 209.	natural revegetation, (32) 227. Ranula, notes, (40) 283.
wheat production in Australia, (36) 209.	Ranunculacene, oils and alkaloids of, (36) 628.
subnormal, frequency in August, (40) 118. summaries, value, (31) 811.	Ranunculus arvensis, habits and eradication, (37 542.
sun spots, and magnetic storms, (38) 811. treatise, (31) 511.	Rapakivi granite, potash from, (27) 127.
Variation in (26) 214	Rape— analyses, (28) 469; (32) 171.
variation with altitude, (27) 816, 817. Rainstorm of 1912 in British Isles, (30) 118. Rainstorms in New York City, (30) 417.	and turnius, crosses between (31) 528
Rainstorm of 1912 in British Isles, (30) 118. Rainstorms in New York City. (30) 417.	as cover crop, (32) 332.
Rainy season in southern Educesia, (32) 211.	as cover crop. (32) 332. cover crop for fall planting, (39) 532. forage crop. (31) 829; (33) 226; (38) 827; (39) 338. green manure for wheat, (35) 428.
Raisin—	green manure for wheat, (35) 426.
grapes, seedless, (39) 845. industry in California, (35) 343. industry in United States, (34) 835. industry in Valencia, (29) 439. seeds, utilization, (29) 13; (39) 615.	hog pasture, (32) 136; (33) 380; (39) 372, 777, 879; (40) 771.
industry in United States, (34) 835.	breeding, (28) 835. bug, notes, (40) 260.
seeds, utilization, (29) 13: (39) 615.	cake, analyses, (26) 165; (27) 570, 872.
Raisins—	cake, effect on milk and butter, (34) 570.
dried— analyses, (30) 861.	cake, residual effects, (31) 319. cake, sulphureted, fertilizing value, (38) 121.
inoculation experiments with brown rot	cooperative experiments, (29) 138.
fungus, (33) 247.	culturo, (27) 32; (28) 835; (31) 35; (32) 226, 337; (33) 238.
treparation and use, (29) 462. drying, (37) 114.	culturo
effect on composition of urine, (31) 761.	and pasturing value, (40) 36. experiments, (28) 531, 735; (31) 42; (32) 132, 528; (33) 33, 34; (37) 132; (38) 133. for winter forage, (38) 735. in cotton belt, (32) 533.
for pigs, (36) 171. insects affecting. (34) 60.	528; (33) 33, 34; (37) 132; (38) 133.
insects affecting, (34) 60. g, (34) 235; (35) 647.	in cotton belt. (32) 533
oil and press cake from seeds, (40) 803.	Hawaii, (32) 729.
ripening and cap-stemming, (32) 235. seedless, cap-stemming, (28) 742.	Hawaii, (32) 729. Porto Rico, (29) 631. Rhodesia, (27) 32, 637.
	under dry farming, (36) 529.
Raleigh, N. C., as an agricultural and financial center, (36) 494.	dust, analyses, (28) 523. dust, fertilizing value, (27) 831, 832; (35) 30; (37)
Rama inder, tests, (31) 526.	229; (39) 529.
Ramie—culture, (37) 830.	fertilizer experiments, (26) 129, 424, 631; (27) 32, 422; (28) 815, 816; (29) 22; (32) 435; (35) 221, 728; (36) 626; (37) 135, 553; (39) 624, 738.
culture experiments, (35) 337.	728; (36) 626; (37) 135, 533; (39) 624, 738.
notes, (28) 335. varieties, (30) 434.	iertilizing value, (27) 831.
Ramona stachyoides—	for cut-over land pasture, (39) 231. fattening lambs, (40) 569.
analyses, (26) 612. oil of, (33) 202.	fattening lambs, (40) 569. pigs, (34) 174.
Ramularia—	silage, (35) 768. germination as affected by fertilizers, (29) 327.
areola, notes, (33) 741; (35) 45, betas, notes, (28) 649.	growth as affected by fertilizer salts, (29) 329.
brunnes, description, (26) 852.	insects affecting, (31) 548.
cynarae on artichoke, (32) 341. macrospora, notes, (27) 45.	liming experiments, (38) 22; (39) 25.
macrospora, relation to apple rot, (33) 348.	grawth as affected by fertilizer saits, (29) 329. growth on volcanic ash, (32) 36. growth on volcanic ash, (32) 36. insects affecting, (31) 548. liming experiments, (38) 22; (39) 25. meal, availability of nitrogen in, (35) 426. nibs, analyses, (27) 670. oil, detection, (26) 713; (29) 613; (39) 804. oil, physical constants, (36) 312. pollination experiments, (30) 528. relation between size of seed and yield. (26) 434.
n.spp., descriptions, (37) 748. paulula, notes, (26) 341.	oil, detection, (26) 713; (29) 613; (39) 804.
spp. on potatoes, (33) 849.	pollination experiments. (30) 512.
studies, (30) 537.	relation between size of seed and yield, (26) 434.

Town Combined	
Rape—Continued.	Raspberry—Continued.
root development with other crops, (26) 129.	juice, preparation, (33) 316; (40) 763. juice, studies, (34) 256.
root louse injury, (40) 60. root system, (32) 634.	juice, studies, (34) 256.
seed, adulteration (35) 740	mildew, notes, (34) 749
seed, adulteration, (35) 740. seed, analyses, (33) 870.	Ohta, description, (30) 640
seed cake—	orange rust, studies, (37) 457. pollen, germination, (35) 731.
acidity, (32) 259; (35) 770.	red worm, notes, (36) 754.
analyses, (30) 268, 467; (34) 263.	root rot fungus, composition, (26) 750.
as a feeding stuff, (37) 416.	root rot fungus, composition, (26) 750. rust, notes, (36) 498.
examination, (37) 416.	rust, notes and treatment, (29) 50.
fertilizing value, (38) 624.	spur blight, (36) 396.
for grass lands, (33) 527.	strawberry hybrid, description, (28) 742.
Indian, adulteration, (26) 468. seed—	thimbleberry hybrid, (36) 442.
imported, germination tests, (35) 140.	wilt, description, (34) 55.
in Maryland markets, (32) 740.	wine, preparation, (27) 412. yellow:
meal, analyses, (30) 268; (31) 467, 864; (33)	description and treatment, (30) 246; (31)
170, 870.	545.
oil, manufacture, (31) 42.	immune variety, (40) 154.
oil, refractive index, (27) 614.	notes, (30) 647; (32) 49, 149; (39) 353.
production and utilization, (34) 531.	studies, (26) 646.
production in China, (31) 42.	Rat—
vitality, (27) 740. serpentine leaf miner affecting, (29) 857.	destroying preparations, investigations, (27)
sulphur in, (31) 817.	550.
susceptibility to swede mildew, (34) 52.	diseases, papers on, (27) 754.
tops, analyses and feeding value, (34) 664.	flea, Indian, infectiousness, (40) 161.
tops, decomposition in soil, (40) 214.	fleas— bionomics of (27) 58: (30) 757
varieties, (26) 631; (27) 32; (30) 525; (31) 42, 829;	bionomics of, (27) 58; (30) 757. in Suffolk and North Essex, (28) 757; (29) 55.
(37) 134, 135.	
water requirements, (29) 826; (32) 127.	life history, (31) 552. longevity, (28) 356. notes, (26) 658; (29) 755; (32) 348; (33) 159. relation to bubonic plague, (30) 254.
yield as affected by sulphur, (34) 726.	longevity, (28) 356.
yields, (31) 226.	notes, (26) 653; (29) 755; (32) 348; (33) 159.
Raphanus-Brassica hybrids, studies, (29) 320.	relation to bubonic plague, (30) 254.
Rapistrum rugosum, notes, (34) 532. Raspberries—	guard for ships' lines, description, (27) 550. plague, diagnosis, (36) 753. plague of East Suffolk, England, (26) 461.
acidity, (32) 110: (37) 715.	plague, diagnosis, (36) 753.
as a medicinal plant. (30) 145.	plague of East Sulloik, England, (20) 401.
breeding, (31) 442; (38) 845.	proofing— as an antiplague measure, (27) 754.
breeding and testing in Minnesota, (40) 148.	public docks of New Orleans, (33) 552.
Raspoerries— acidity, (32) 110; (37) 715. as a medicunal plant, (30) 145. breeding, (31) 442; (38) 845. breeding and testing in Minnesota, (40) 148. breeding experiments, (28) 542; (32) 338, 835; (33) 637; (35) 144, 744; (36) 741; (37) 240; (39) 340; (40) 740, 742.	serum, anaphylatoxin produced in, (37) 580.
(33) 637; (35) 144, 744; (36) 741; (37) 240; (39)	traps, efficiency, (30) 851.
340; (40) 740, 742.	Ret-hite fever-
crossing experiments, (33) 44. culture, (28) 840; (31) 441; (33) 47; (34) 42; (38) 246, 347, 643, 845; (39) 242. culture experiments, (27) 343; (28) 436. culture in western Nebraska, (32) 233.	cause, (35) 487, 783; (37) 375. spirochete, (39) 588; (40) 781. streptothrix in, (36) 678.
246, 347, 643, 845; (39) 242	spirochete, (39) 588; (40) 781.
culture experiments. (27) 343; (28) 436.	streptothrix in, (36) 678.
culture in western Nebraska, (32) 233.	Strictes, (40) 479.
extracted, sale, (28) bbl.	treatment, (35) 487; (39) 389.
fertilizer experiments, (33) 48; (34) 294; (36) 121;	Raticide, notes, (27) 52. Ratin, use against voles, (30) 545.
(38) 218, 540.	
for home and commercial planting, (33) 537.	Rations— acid and basic, effect on ammonia production,
frost injuries, (27) 349; (29) 547. fungus disease affecting, (26) 450.	(33) 368.
hybridization experiments (28) 438	army, see Army rations.
improvement in Minnesota, (34) 637. insects affecting, (26) 246; (28) 352; (40) 158. irrigation experiments, (33) 633; (36) 640. new, description, (29) 838; (33) 238; (35) 37. picking and packing, (33) 47.	balanced, (33) 97.
insects affecting, (26) 246; (28) 352; (40) 158.	balanced—
irrigation experiments, (33) 683; (36) 640.	from restricted sources, (33) 69, 367, 465;
new, description, (29) 838; (33) 238; (35) 37.	(37) 766; (39) 71.
picking and packing, (33) 47.	from restricted sources, physiological
preservation by freezing, (38) 344.	effects, (26) 467. notes, (29) 362.
preservation by pressure, (32) 416. propagation and shipping experiments, (34) 637.	v. unbalanced, for cows, (28) 174.
shipping experiments, (33) 642. training, (33) 47; (40) 743. varieties, (28) 542; (33) 47; (35) 742; (37) 243; (38)	balancing, (28) 465; (31) 663.
training, (33) 47; (40) 743.	box, for army use, (35) 165.
varieties, (28) 542; (33) 47; (35) 742; (37) 243; (38)	calculating, (33) 170. changes in, (26) 261.
240, 043.	changes in, (26) 261.
varieties for New York, (26) 239.	combining for livestock, (29) 170.
varieties in Oklahoma, (27) 241.	eomputing, (28) 384, 770; (31) 266; (38) 73; (39)
variety tests, (32) 141, (40) 340, 140.	concentrated v. bulky, for cows, (28) 174.
Raspberry— anthracnose—	digestibility of components, (36) 470.
notes, (40) 53.	effect on-
perfect stage, (33) 350; (38) 252.	composition of urine of dairy cows, (36) 672.
studies, (36) 347; (38) 853.	development of swine, (33) 375.
treatment, (39) 343, 457.	development of swine, (33) 375. growth and dairy qualities of cows, (34) 378. intestinal flora of swine, (38) 375. quality and yield of wool, (32) 99. emergency for U. S. Army, (35) 664. emergency, notes, (32) 562. for Arab soldiers, (33) 68. cattle and sheep. (30) 567.
beetle, notes, (32) 448; (40) 265.	miestinal flora of swifte, (55) 575.
bluestem, studies, (28) 348.	emergency for IT. S. Army. (35) 664.
byturus, notes, (28) 158. cane blight, description and treatment, (27)	emergency, notes, (32) 562.

733, 736; (32) 41, 136, 217, 721; (33) 32, 227; (35)	analyses, (26) 267, 363, 568; (27) 570; (28) 265; (29) 367; (30) 67; (31) 73, 366, 467; (32) 465, 862; (33) 170; (34) 263; (38) 572,
31, 32, 337; (36) 332, 532; (37) 338, 529, 539, 729.	(32) 465, 862; (33) 170; (34) 263; (38) 572.
823, 824, 825; (38) 337, 424, 433, 527, 635, 735;	666.
(39) 230, 427, 529, 537, 738, 817; (40) 228, 231,	effect on milk and butter, (34) 570.
field fly, notes, (38) 363.	effect on pigs, (33) 775; (30) 69, 83, 180. for pigs, (33) 761.
fields as a factor in control of malaria, (37) 565.	milled, standards, (39) 871.
flour	milling, (34) 559; (37) 363.
analyses, (26) 768, 873. availability of nitrogen in, (26) 124; (27) 723.	milling-
avaliability of nitrogen in, (28) 124; (27) 723. medicinal value, (29) 865.	and by-products, (38) 67, 477.
recines. (39) 871.	industry in United States, (31) 66.
recipes, (39) 871. use in bread making, (33) 260.	processes, (26) 468.
IOOd value, (30) 557.	products, analyses, (31) 163. moth, notes, (34) 754.
for growing chicks, (38) 677. germ, composition, (26) 502.	(81) 145.
germinghility in relation to temperature and	new varieties, descriptions, (37) 831. new varieties from Japan, (31) 529, 632.
germinability in relation to temperature and humidity, (37) 736.	new varieties from Japan, (31) 529, 632.
germination energy of, (29) 538.	notes, (26) 362. nutritive value and preparation, (31) 855.
germination studies, (29) 740; (30) 437; (31) 529; (38) 24.	of Bihar and Orissa, chemical study, (36) 463.
gluten meal, analyses and feeding value, (32)	of Lower Burma, (35) 230.
266.	of Siam, composition, (30) 834. oil and fat, chemistry of, (33) 506.
grading, (34) 560.	oil, studies, (30) 665.
grains, disintegration by caustic potash, (31) 834.	on Yuma project, notes, (40) 434.
grains, weight of, (38) 531. grasshopper, control, (28) 249.	organic phosphoric acid of, (32) 712.
grasshopper, studies (27) 55.	phosphorus and nitrogen content, (26) 865.
green-manuring experiments, (36) 232; (38) 220,	phosphorus content, (27) 461. pink, heredity in, (40) 632.
336; (40) 336.	plats for breeding, (40) 336.
ground— analyses, (31) 65	nolish-
analyses, (31) 65. digestibility and productive value, (37) 865.	analyses, (26) 468, 568, 665, 768; (27) 469; (28) 464, 572; (30) 565; (31) 73, 366, 863; (32) 862; (33) 870; (34) 263, 407; (36) 65, 765; (38) 369; (40) 571.
puffed, analyses, (29) 666. rough, analyses, (26) 468.	(28) 464, 572; (30) 565; (31) 73, 366, 863;
rough, analyses, (26) 468.	(32) 802; (33) 870; (34) 203, 407; (30) 60,
growth as affected by alkali salts, (30) 630, 728, 833.	analyses and feeding value, (38) 477.
growth on colorrous coils (21) cor cre	ash aharyses, (29) 501.
hay and straw, mineral constituents, digestibility, (40) 769. hay, digestibility and productive value, (37) 865. head-to-the-row test, (32) 230. host plant of corn billing, (26) 862. brill carbon, use in superbours work.	composition and feeding value, (37) 363.
buity, (40) 769.	digestibility, (31) 863; (37) 678. oil from, (39) 109.
head-to-the-row test (30) 930	
host plant of corn bilibug. (26) 862.	polished— and vitamin as a complete food, (32) 67.
hull carbon, use in sugarhouse work, (37) 806. hull content, calculating, (37) 363. hulled volume weight and really characters	composition, (29) 565.
hull content, calculating, (37) 363.	composition, (29) 565. effect on the brain, (27) 365.
hulled, volume weight and grain character- istics, (37) 643.	nutritive value, (36) 158.
huller and polisher, tests, (27) 234.	use in Philippines, (28) 760; (33) 261. polishings—
hulling waste product as a feeding stuff. (35)	chemistry of, (33) 564.
271.	extract, use against beriberi, (34) 367.
analyses, (34) 467.	phosphotungstate precipitate, (33) 167.
burnt, fertilizing value, (30) 731.	use as porridge, (31) 258.
composition and feeding value. (38) 67.	vitamin-fraction from, (29) 664. vitamins in, (30) 285.
composition and use, (27) 727. determination in feeding stuffs, (29) 810.	pollination, (36) 527.
determination in feeding stuffs, (29) 810.	pollination—
feeding value, (39) 272. for chicks, (37) 768.	and cross-fertilization in, (29) 522; (32) 830.
PACTURE CHOICE (SEL (SEC) 1991 DEC	Donned production in Ohine (40) 557
husking in variety tests, (39) 236.	Dreparation. (27) 66.
husking in variety tests, (39) 236. hybridization, (26) 733; (38) 236, 526, 635. hybrids, transmission of characters in, (26) 435.	studies, (33) 234. popped, production in China, (40) 557. preparation, (27) 66. preparations, effect on quality of dough, (26) 761.
llocano and Tagalog, selection, (40) 336.	production—
imports into United States, (34) 435.	and uses, (27) 739; (39) 888. in the Americas, (38) 34.

Rice-Continued.	Rice—Continued.
production—continued.	varieties—continued.
in United States, (26) 293; (27) 739. 1918 program, (38) 836.	in Philippines, (36) 531.
1915 program, (35) 550.	Yamethin district, Burma, (29) 736. variety tests, (39) 230; (40) 228, 242, 332, 336, 523,
products, analyses, (32) 169, 568. proteins, (27) 166.	625, 823, 825.
proteins, nutritive value, (39) 665, 666.	waste, composition and use, (27) 727.
proteins, nutritive value, (39) 665, 666. proteins, reagent for, (29) 881. puffed, analyses, (30) 68 rate of seeding tests, (27) 637, 638. red, control. (39) 529.	water culture experiments, (30) 832.
puffed, analyses, (30) 68	water requirement, (32) 127.
rate of seeding tests, (21) 651, 655.	water weevil— habits and remedies, (29) 259.
red, cradication, (37) 532.	investigations, (27) 562.
region, meteorological service, (39) 718.	investigations, (27) 562. remedies, (33) 257; (37) 568.
relation to beriberi, (26) 155; (28) 168, 569; (29) 269, 460; (31) 463, 555, 858.	weather injuries in Italy, (37) 50.
269, 460; (31) 463, 555, 858.	Weevil— as affected by Poentgen rove (29) 57
relation to polyneuritis, (28) 567. root rot, studies, (29) 447.	as affected by Roentgen rays, (28) 57.
rotation experiments. (33) 32.	egg laying habits, (31) 655. in stored cereals, (39) 463, 862.
rotation experiments, (33) 32. salt as fertilizer for, (32) 324.	life history and remedies, (28) 455; (31) 354, notes, (26) 453; (27) 657; (28) 158; (29) 458; (30) 655; (31) 57; (34) 754.
salt water, tests, (30) 233.	notes, (26) 453; (27) 657; (28) 158; (29) 458;
sampling and grading, (39) 871.	on stored corn. (40) 861
sclerotial diseases, (40) 48. screenings, analyses, (27) 774.	remedies, (27) 258.
seed—	studies, (37) 356; (40) 752.
coats, thickness, (39) 826.	on stored corn, (40) 861. remedies, (27) 258. studies, (37) 356; (40) 752. wild, cultivation by Indians, (38) 34.
germination tests, (27) 534.	
light v. heavy, (20) 435. selection, (30) 233, 338, 437; (37) 538, 539, 824.	wild, in tropical Africa, (26) 438. wilt disease, notes, (28) 647. withering of panicle in, (33) 850.
selection tests. (40) 523.	withering of panicle in, (33) 850.
seeding and transplanting, (36) 532.	worm, notes, (34) 250. xenia in, (32) 230; (40) 632.
selection tests, (40) 523. seeding and transplanting, (36) 532. seeding experiments, (29) 830; (30) 525; (37) 532,	xenia in, (32) 230; (40) 632.
824.	yellow grains in, cause, (33) 548. yield as affected by deep plowing, (35) 527.
seedlings, transplanting, (38) 527. selection experiments, (38) 526, 527; (40) 336, 523,	yields, determination, (37) 634.
622	Richardsonia (scabra) glabra, culture, (30) 335.
smut, description and bibliography, (35) 247.	Richweed, toxicity, (38) 685, 883.
smut, notes, (29) 245; (35) 243. soil aeration, (38) 828.	Ricin—
soil aeration, (38) 828.	agglutinating properties, (31) 773. and its antitoxins, (32) 78.
soils of Hawaii, studies, (30) 420. soils, swamp, gases of, (39) 517.	chemical and biological properties, (31) 774.
spacing experiments, (36) 532.	chemical nature and preparation, (30) 204.
spelts or hulls, determination in rice feed meal,	detection in feeding stuffs, (34) 407.
(26) 714.	detection in feeds, (30) 204.
spike disease, notes, (38) 848.	notes, (26) 676. Ricinus—see also Castor beans.
starch—content, (35) 108.	communis for sheep, (26) 368.
determination, (26) 709. determination, (26) 709. fractional liquefaction, (32) 633. hydrolysis by diastase, (28) 407; (30) 111.	communis for sheep, (26) 368. diseases, notes, (29) 243. poisoning, studies, (34) 466.
fractional liquefaction, (32) 633.	poisoning, studies, (34) 466.
hydrolysis by diastose, (28) 407; (30) 111.	Rickets—
notes, (27) 765. studies, (31) 828.	prophylactic therapy, (39) 772. relation to diet, (26) 264; (29) 464; (39) 568.
stem horar studies (35) 659.	review of investigations, (36) 363.
stored, insects affecting, (30) 655.	studies, (39) 568, 589.
stem borer, studies, (35) 659. stored, insects affecting, (30) 655. straight head disease, (35) 350; (39) 529.	summary and digest of data, (36) 161.
straw—	Rickia n.spp., descriptions, (27) 460. Rictularia splendida n.sp., description, (32) 185.
as mulch for sugar cane, (40) 633.	Rileya—
chloroform extract of, (31) 71. composition, (27) 608. digestibility, (27) 699; (34) 72; (37) 168. feeding value, (38) 168.	n.sp., description, (36) 557.
digestibility, (27) 669; (34) 72; (37) 168.	synopsis of species, (40) 760.
feeding value, (38) 168.	Rinderpest— antiserum—
fertilizing value, (30) 731. sulphur and chlorin content, (29) 231.	immine hodies in. (28) 881.
tipulids and tabanids affecting, (33) 555.	preparation, (28) 881.
transplanted, morphology and development,	preparation, (22) 831. production, (31) 283. atypical, in carabao, (31) 677; (36) 181.
	atypical, in carabao, (31) 577; (36) 131.
transplanting, (31) 834; (32) 230; (33) 234; (37) 538, 824, 825; (40) 529. transplanting, Italian method, (34) 36.	blood, virulency in water leeches, (33) 876. chemotherapy, (32) 82. control in island of Panny, (29) 582.

bittern, potash from, (39) 328. effect on concrete, (29) 686.	drille adiiisimont (28) 85
effect on nitrification of sewage, (26) 317.	drills, tests, (27) 387; (30) 292. examination, (29) 740; (31) 509.
use for irrigation, (33) 392. winds, effect on male inflorescences of pine, (38)	fairs in Canada, (33) 697. farms in India, report, (26) 232.
331.	formation and parthenocarpy in bananas, (31) 535.
Seals of Laysan Island, (27) 549. Seaside planting, treatise, (40) 447.	growers' association in Canada, (26) 839.
Seasonal correlations in the Far East, (85) 115; (37) 807.	harvester for clover, (39) 292. houses, fumigation, (20) 641.
Seasonings, analyses, (30) 257.	improvement associations in Sweden, (26) 486.
Seasonings, examination, (31) 656. Seasons—	industry in Germany, (36) 638. industry in New York, (34) 40.
forecasting, (37) 619.	inspection— and analyses, (35) 140.
growing, length of, (36) 418. limits of, (34) 14.	in Argentina, (37) 823. Arizona, (31) 155.
of Alaska, (39) 124, 125. Seaweed—	Canada, (30) 230.
analyses, (26) 324; (27) 327, 421; (35) 128, 163, 167, 327; (36) 120.	Colorado, (39) 343. Connecticut, (36) 39.
analyses and fertilizing value, (37) 814.	Denmark, (29) 433; (37) 742; (40) 832.
as feeding stuff, (35) 167. as fertilizer for potatoes, (38) 432.	England and Wales, (40) 339, 637. Germany, (28) 736.
as fertilizer for potatoes, (38) 432. as food material, (35) 163. biochemistry of, (29) 566.	Kentucky, (39) 443. Mane, (26) 838; (29) 144; (31) 43; (32) 833;
burning in Norway, (29) 517.	(32) 130, (30) 201, (31) 20, (33) 323, (20)
chemical analyses, (40) 725. composition and use, (26) 126.	443. Maryland, (26) 333; (36) 442; (37) 541; (39)
culture in Ireland, (33) 819. fertilizing value, (26) 324; (31) 517, 829; (38) 624;	343; (40) 535, 831. Michigan, (28) 836; (32) 635.
(40) 724.	Minnesota, (32) 635; (35) 642; (37) 446;
for packing birds, (32) 672. for potatoes, (33) 330.	(40) 338. Missouri, (38) 633.
for potatoes, (33) 330. industry in France, (31) 517.	Montana, (31) 633; (32) 740; (35) 835; (37)
mucılage, use against fruit pests, (32) 56. Philippine, use as food, (40) 557.	New Hampshire, (27) 536; (31) 139; (32)
Philippine, use as food, (40) 557. potash from, (26) 726; (27) 724; (28) 522; (29) 128; (33) 819; (34) 26, 327.	635; (34) 531; (36) 739; (39) 842. New Jersey. (31) 532; (34) 832; (36) 836;
uthization, (34) 298.	(37) 239, 645; (39) 842.
cereale, chromosome numbers in, (27) 636.	New York State, (29) 40; (31) 139; (32)
montanum, relation to cultivated rye, (32) 131. Sechium edule—	205; (34) 341; (36) 739; (39) 842. New Hampshire, (27) 536; (31) 139; (32) 635; (34) 531; (36) 739; (39) 842. New Jorsey, (31) 532; (34) 832; (36) 836; (37) 239, 645; (39) 842. New South Wales, (40) 638. New York State, (29) 40; (31) 139; (32) 741; (35) 740; (39) 541. Now Zealand, (37) 446. North Carolina, (27) 536; (29) 144; (31)
analyses, (31) 863.	Now Zealand, (37) 446. North Carolina, (27) 536; (29) 144; (31) 139; (33) 836; (38) 240; (40) 338, 443. North Dakota, (33) 138. Pennsylvania, (34) 143; (36) 739; (39) 238. Queensland, (40) 314, 415. Saxony, (32) 638. Vermont, (32) 741; (36) 534; (38) 441. Washington, (29) 266. Wisconsin, (34) 143. Zurich, Switzerland, (38) 538. introduction, relation to phytopathological
culture experiments, (30) 632. notes, (29) 461; (30) 532; (34) 835.	North Dakota, (33) 138.
Secodella n.spp., descriptions, (34) 363. Secretin, effect on circulating blood, (39) 285.	Pennsylvania, (34) 143; (36) 739; (39) 238.
Secretions, internal, treatise, (30) 380.	Saxony, (32) 689.
Sedge rusts— studies, (34) 744.	Washington, (29) 266.
taxonomy, (33) 130. Sedges—	Wisconsin, (34) 143. Zurich, Switzerland, (38) 538.
of Guam, (31) 467.	introduction, relation to phytopathological problems, (40) 343.
of Philippines, (33) 433. Sedimentation glass, description, (31) 811.	law in—
Sedoheptose, notes, (37) 502. Sedulothrips insolens in Trinidad, (40) 649.	Canada, (27) 643; (39) 744.
Sedum sieboldii as affected by radium, (28) 825	Colorado, (38) 140; (39) 238. Maryland, (29) 337; (32) 740; (40) 146.
seed— analyses, interpretation and use, (29) 143.	Massachusetts, need of, (28) 395. Michigan, (28) 836.
association in Sweden, (40) 823. bed frame, nursery, description, (35) 452.	New Hampshire, (27) 536; (29) 741; (31) 139; (39) 842.
bed frame, nursery, description, (35) 452. beds, preparation, (37) 227.	New Jersey, (28) 339; (31) 532; (35) 835. New York, (20) 40.
beds, sterilization, (38) 556. coats, permeability, (34) 626; (38) 126.	North Dakota, (30) 342.
coats, permeability, (34) 626; (38) 126. coats, semipermeability, (30) 132. collection, notes, (29) 242.	Oregon, (35) 471. Vermont, (32) 741.
control—	Wisconsin, (32) 635; (34) 143.
and plant breeding, (40) 245. in Switzerland, (29) 337.	Wyoming, (33) 138. law, notes, (29) 633.
measures in various countries, (39) 744.	law, uniform, proposed principles, (39) 239. oils, digestibility, (39) 571.
at Christiania, report, (28) 315.	"preparator," description, (27) 235, 739.
Lund, report, (28) 46.	production— detrimental conditions, (39) 841.
at Christiania, report, (28) 315. Graz, report, (28) 414. Lund, report, (28) 46. Rostock, (32) 833. Zurich, (32) 833.	in Sweden, (39) 644. in Switzerland, (40) 833.
Danish, report, (27) 39. control stations—	
in Europe, (31) 835. in Finland, report, (30) 599.	physiology of, (30) 433. proteins, nutritive values, (39) 665, 666.
in Finland, report, (30) 599. in Norway, (30) 194.	proteins, studies, (40) 69, 563. red clover, (40) 627. reports, (38) 343, 441, 639, 743, 841; (39) 38, 138 238, 348, 443, 644, 744; (40) 146, 245, 338, 535, 531 reserve material, effect on development of plants
corn maggot, see Phorbia fusciceps.	reports, (38) 343, 441, 639, 743, 841; (39) 38, 138
corn, storing under tropical conditions, (39) 738. demonstration tests in Alaska, (39) 125. determination of freshness and vitality, (26) 44.	205, 045, 445, 044, 144; (40) 146, 246, 565, 556, 551, 851 reserve material, effect on development of plants
determination of freshness and vitality, (26) 44.	(26) 729.

	Shredded wheat—
pollution, relation to sewage bacteria, (27) 212 Potomac River, examination, (35) 287.	analyses, (32) 667. waste, analyses, (27) 872; (30) 68; (33) 371; (34)
problems, research on, (40) 459.	665: (35) 373.

Shrew—	Shrubs-Continued.
new, from Nova Scotia, (37) 758.	ornamental-continued
new, from Oregon, (40) 351. short-tailed, feeding habits, (32) 54.	culture experiments, (29) 235; (32) 437. culture in Alaska, (20) 743. description, (35) 450. destruction by Chinese cotton scale, (26)
Shrike, California, destruction of locusts by, (28)	description, (35) 450.
851. Shrimp—	destruction by Chinese cotton scale, (26) 556.
analyses and use, (37) 863.	for Florida, (34) 535.
canned, tin salts in, (26) 66. creatin and creatinin content, (31) 760.	Kansas, (31) 536. Oregon, (39) 241.
preparation and shipping, (37) 863.	unfavorable city conditions, (33) 442.
waste as fertilizer, (37) 863. Shrub diseases, prevalence in Toxas, (26) 645.	insects affecting, (27) 453; (35) 756.
Shrub seeds, germination, (33) 343.	notes, (29) 395. of Dade County, Florida, (31) 239.
Shrubs— acclimatization, (34) 231.	of Hawaii, (37) 546. selecting, (40) 640. tests, (36) 443.
and trees for seaside planting, (40) 447.	tests, (36) 443.
trees, of central Europe, handbook, (30) 742.	treatise, (37) 44. varieties, (29) 235, 540; (36) 837.
trees on the farm, (40) 447. trees, treatise, (30) 445. annual growth of, (35) 841 as affected by freezing, (28) 824, as affected by tarred roads, (27) 30, 333.	periodicity and annual ring formation, (28) 340.
annual growth of, (35) 841 as affected by freezing (28) 824	phenological data, (33) 525.
as affected by tarred roads, (27) 30, 333.	planting on dry farms, (28) 49 propagation, (28) 840; (34) 533.
assimilation and chlorophyll content of leaves, (28) 728.	propagation and pruning, (30) 236.
at Belle Fourche experiment form. (36) 143	propagation by cuttings, (40) 340. pruning, (37) 242.
berry-bearing, for birds, (34) 238. bibliography, (34) 238. blooming dates for, (26) 237; (27) 240.	quarantine law in Missouri, (26) 854.
blooming dates for, (26) 237; (27) 240.	relation between root habit, ground water, and species distribution, (29) 136.
breeding and culture experiments, (38) 641. Chinese, for Pacific slope and Gulf coast regions,	ripening of growing parts, (35) 542. secondary growth phenomena, (28) 340. transpiration in, (27) 522. transplanting, (27) 491.
(35) 450.	transpiration in. (27) 522.
Chinese ornamental, notes, (32) 440. culture, (31) 140; (36) 585.	transplanting, (27) 401.
culture—	treatise, (26) 140; (28) 342; (29) 842; (34) 345, varieties, (34) 231; (38) 142, 641.
and care, (34) 836. experiments, (26) 237; (28) 147; (32) 542; (37)	water conductivity of wood, (40) 821.
241.	Winter injuries, (31) 49.
in California, (26) 47. California, treatise, (33) 441. western Nebraska, (29) 546; (32) 234.	Shucks, ground, analyses, (34) 767. Sialia n.sp., description, (37) 846. Sibine stimulea, see Saddle-back caterpillar.
Western Nebraska, (29) 546; (32) 234.	Sibine stimulca, see Saddle-back caterpillar. Sibinia peruana n.sp., description, (32) 658.
eye igreen, winter transpiration of, (31) 728, for eastern Colorado (37) 837	Sickness, effect on growth of the brain, (34) 662.
home grounds, (34) 741; (39) 450.	Siculades fulcata, notes, (30) 657.
evergreen, winter transpiration of, (31) 728, for eastern Colorado, (37) 837. home grounds, (34) 741; (39) 450. Illinois, (28) 840; (34) 45. Kansas, (35) 43.	fiber, tests, (31) 526.
latitude of St. Louis, (34) 439. northern Minnesota, (37) 241.	rhombifolia-
northern Minnesota, (37) 241.	analyses, (34) 35. analyses and valuation, (30) 138.
ornamental plantings, (38) 45, railway gardening, (35) 450. southeastern Alaska, (33) 638.	fiber, examination, (30) 442. Sieves, cement, tosts, (30) 888.
southeastern Alaska, (33) 638. Truckee-Carson reclamation project, (31)	Sigalphus daci n.sp., description, (26) 152.
835.	Sigaiphus spp., notes, (27) 564.
forcing experiments, (28) 837. handbook, (26) 642; (27) 346.	Sigalsoesa n.spp., notes, (35) 250. Signiphora—
hardy elimbing, description, (35) 450. hardy, for Maine, (35) 840. hardy, of the British Isles, treatise, (32) 837. indigenous to Australia, (26) 830, inserts affecting, (28) 854, (27) 246	flavopalliata occidentalis, notes, (35) 761.
hardy, for Maine, (35) 840. hardy, of the British Isles, treatise, (32) 237	giraulti n.sp., description, (31) 554. lutea n.sp., description, (29) 359.
Indigenous to Australia, (26) 830.	merceti n.sp., description, (37) 360; (38) 460.
insects affecting, (26) 654; (27) 346.	n. spp., descriptions, (31) 356. nigrita, notes, (31) 356.
new, in Kew Gardens, (31) 236.	nigrita, parasitic on San José scale, (29) 758.
new or noteworthy, from Columbia and Cen-	metedi n.sp., description, (37) 380; (38) 460. n. spp., descriptions, (31) 355. nigrita, notes, (31) 356. nigrita, parasitio on San José scale, (29) 758. occidentalis, parasita on orange scale, (26) 554. pulchra, notes, (27) 550.
